1. Introduction

The AFMC (Armed Forces Medical College) Mess Application is a comprehensive web-based food ordering and mess management system designed to streamline cafeteria operations for military medical personnel and staff. The application provides an intuitive digital platform that enables employees to conveniently order food and beverages, while empowering administrators with robust tools for inventory control, user management, financial reporting, and operational oversight.

This manual serves as a complete reference guide for all users of the AFMC Mess Application, including end users (employees placing orders), system administrators (managing operations), kitchen staff (processing orders), and storekeepers (managing inventory). Each section is organized by user role and provides step-by-step instructions with accompanying screenshots to ensure clarity and ease of use.

The application supports both dine-in and takeaway service modes, offers real-time stock tracking, automated order processing workflows, comprehensive reporting capabilities, and role-based access control to ensure secure and efficient mess operations.

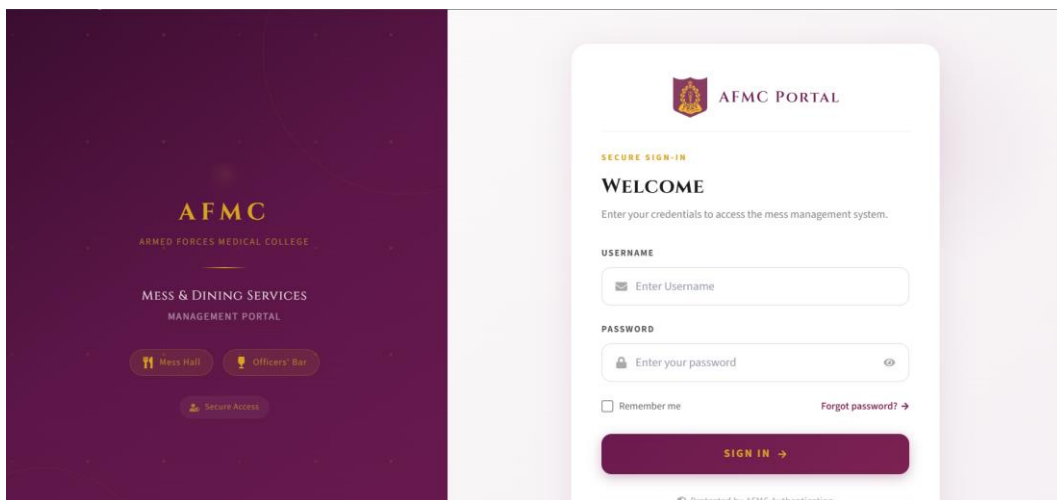

Figure 1: AFMC Mess Application Login Screen

2. Target Audience

The AFMC Mess Application is designed to serve multiple user categories within the organization. Understanding your role will help you navigate the appropriate sections of this manual:

End Users (Employees)

All employees of the organization who wish to place food and beverage orders through the mess system. End users can browse the menu, add items to their cart, customize orders, make payments, and track order status in real time.

System Administrators

Authorized personnel responsible for managing the overall mess operations. Administrators have access to the full dashboard including inventory management, user administration, report generation, offer creation, price management, and system configuration.

Kitchen Staff

Kitchen personnel who process incoming orders, update order status, manage food preparation workflows, and ensure timely order fulfillment. The kitchen module includes separate interfaces for snack preparation and bar drink preparation.

Storekeepers

Inventory management personnel responsible for monitoring stock levels, receiving stock alerts, updating inventory quantities, and ensuring adequate supply of all menu items. Storekeepers play a critical role in maintaining uninterrupted mess services.

3. Main Features

The AFMC Mess Application offers a comprehensive suite of features organized across different user roles. The following table summarizes the key capabilities available in the system:

Module	Feature	Description
End User	Menu Browsing	Browse categorized food and drink items with real-time stock status
End User	Cart Management	Add, remove, and adjust item quantities before checkout
End User	Order Tracking	Real-time status updates from preparation to completion
Admin	Inventory Control	Create items, manage categories, update stock, set prices
Admin	User Management	Bulk upload, manual creation, edit, and deactivate accounts
Admin	Offer Engine	Create Buy-X-Get-Y promotional offers
Admin	Reporting	Stock, order, transaction, and profit reports with PDF export
Kitchen	Order Processing	Receive, prepare, and complete orders with barcode verification
Kitchen	Status Updates	Track orders through Received, Preparing, and Completed states
Storekeeper	Stock Alerts	Real-time notifications for low or depleted inventory
Storekeeper	Stock Addition	Add inventory with barcode, pricing, and quantity details

End User Features

0. Browse categorized menu items including drinks (soft drinks, hard drinks, cocktails/mocktails) and snacks (vegetarian and non-vegetarian)
1. View active promotional offers scrolling across the menu dashboard
2. Add items to cart with quantity adjustment and customization options
3. Select service type: Dine-In or Takeaway
4. Proceed through a streamlined checkout and payment process
5. Track order status in real time from preparation through completion

6. View order history and download invoice reports

Administrator Features

7. Comprehensive dashboard with notification alerts for low stock items
8. Inventory management: create items, manage categories, update stock, set prices
9. User management: bulk upload via Excel, manual user creation, edit/deactivate users
10. Offer management: create Buy-X-Get-Y promotional offers with automatic application
11. Report generation: stock reports, order transaction details, order item summaries with PDF export
12. Profit management: configure profit margins by category for members and non-members
13. Cocktail/mocktail creation with custom ingredient management

Kitchen Features

14. Dedicated login for Mess Kitchen (snacks) and Bar Kitchen (drinks)
15. Real-time order notification system with bell icon alerts
16. Order status tracking: Received, Preparing, Ready, Completed
17. Barcode scanning support for order verification and inventory tracking
18. Order cancellation capability with admin approval
19. Order history with date filtering, search, and PDF download

Storekeeper Features

20. Real-time stock alert notifications for out-of-stock items
21. Inventory management with barcode/scan support
22. Stock addition with purchase type, unit rate, volume, and barcode assignment
23. Stock verification and audit capabilities

4. Installation & Setup

The AFMC Mess Application is a web-based platform that requires no local installation. Users can access the system through any modern web browser on desktop computers, laptops, tablets, or mobile devices.

4.1 System Requirements

- 24. Operating System: Windows 7+, macOS 10.12+, Linux, Android, iOS
- 25. Web Browser: Google Chrome (recommended), Mozilla Firefox, Microsoft Edge, or Safari
- 26. Internet Connection: Stable broadband or cellular data connection
- 27. Screen Resolution: Minimum 1024 x 768 pixels for optimal experience
- 28. Hardware: Standard computer, tablet, or smartphone with camera access for barcode scanning (optional)

4.2 Accessing the Application

- 1. Open your preferred web browser.
- 2. Enter the AFMC Mess Application URL provided by your system administrator into the browser's address bar.
- 3. The login screen will appear. Enter your username and password as provided by the administrator.
- 4. Click the Sign In button to access the application.
- 5. Upon successful authentication, you will be redirected to your role-specific dashboard.

4.3 First-Time Login

For first-time users, it is recommended to change your default password immediately after login. Navigate to the Change Password option from the user menu and set a secure password that meets the following criteria:

- 29. Minimum 8 characters in length
- 30. Contains at least one uppercase letter, one lowercase letter, and one number
- 31. Does not match your username or previously used passwords

5. Admin Flow

The Admin Flow encompasses all administrative functions within the AFMC Mess Application. Administrators have the highest level of access and are responsible for system configuration, user management, inventory control, financial reporting, and promotional activities. This section provides detailed guidance for each administrative function.

5.1 Login

To access the administrative dashboard, open the AFMC Mess Application URL in a supported web browser. The login screen will be displayed, prompting for your credentials.

Enter your valid username and password in the respective fields. These credentials are provided by the system administrator or organizational IT department. Upon successful authentication, the system will redirect you to the main dashboard. If authentication fails, an error message will be displayed. Verify your credentials and try again, or contact your system administrator for assistance.

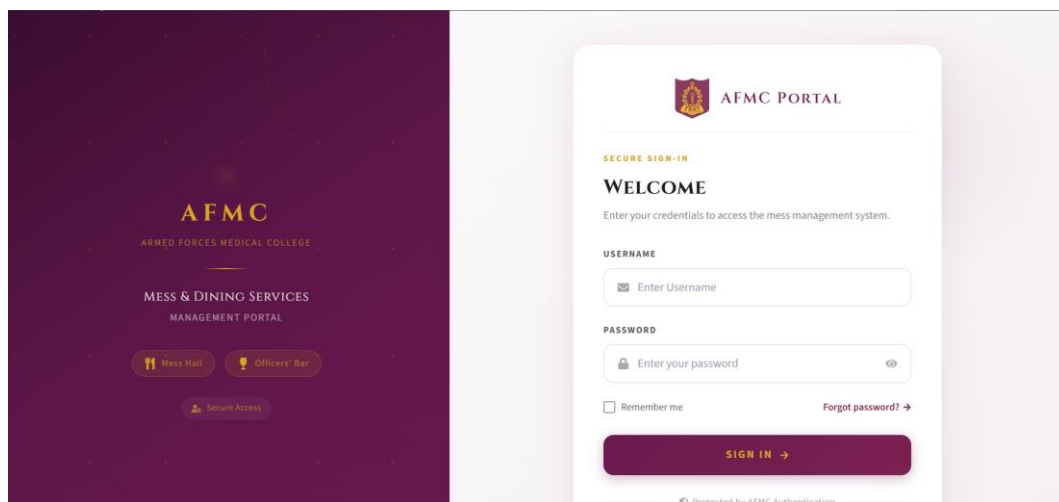

Figure 2: Administrator Login Screen

After successful login, the main dashboard is displayed, providing access to all administrative functions through the navigation sidebar and top navigation bar.

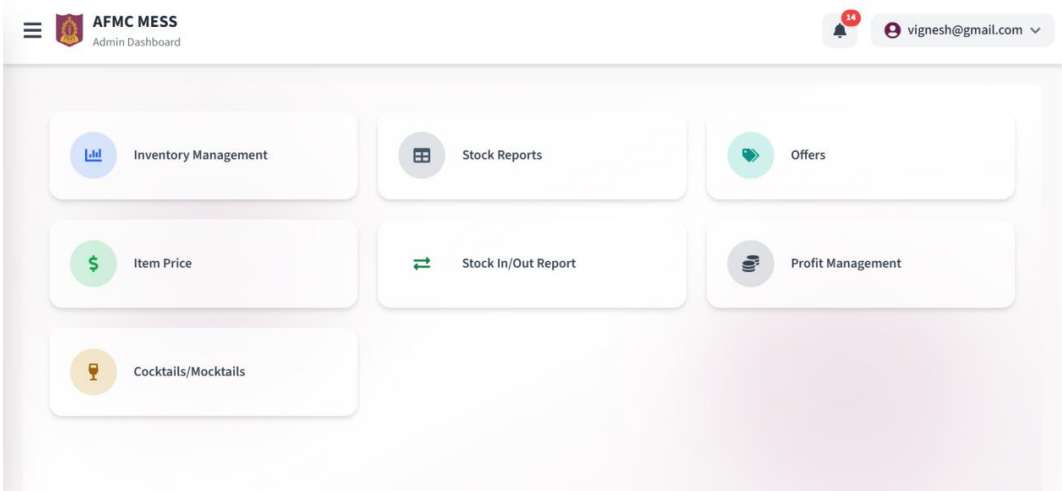

Figure 3: Administrator Dashboard Overview

5.2 Dashboard

The administrator dashboard serves as the central command center for all mess management activities. Upon login, the dashboard displays a comprehensive overview of the system's current state, including navigation elements, notification alerts, and quick-access cards to major functional modules.

The top navigation bar contains a bell icon that displays real-time notifications, particularly important alerts regarding items that are running low on stock or have reached zero inventory. When stock is empty for any item, the admin receives an immediate notification, enabling proactive inventory management.

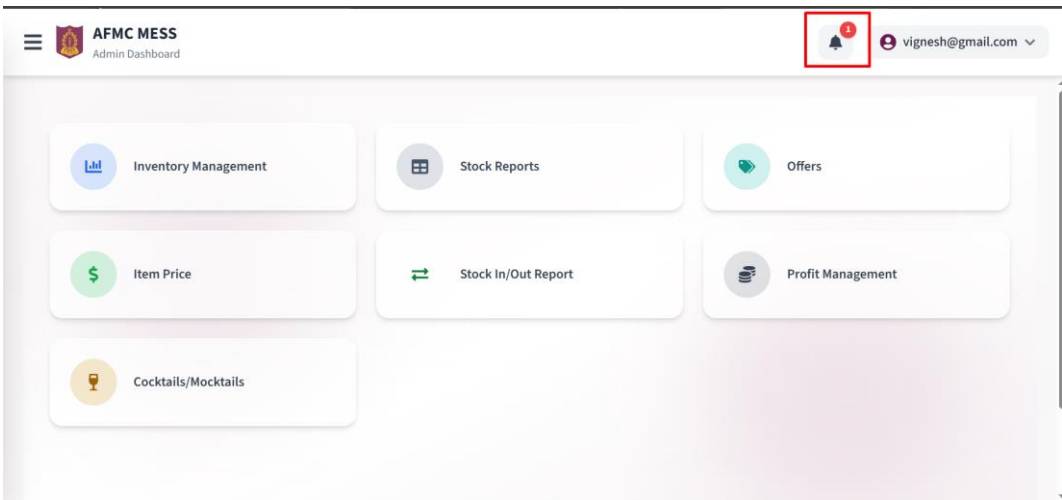

Figure 4: Dashboard with Navigation Sidebar and Notification Bell

The main dashboard area presents functional cards that provide quick access to key modules including Inventory Management, Reports, Offers, Item Price Management, Stock In/Out Reports, Profit Management, Cocktail/Mocktail Management, Add Stock, User Management, Order History,

Cancel Orders, and Change Password. Each card can be clicked to navigate directly to the corresponding module.

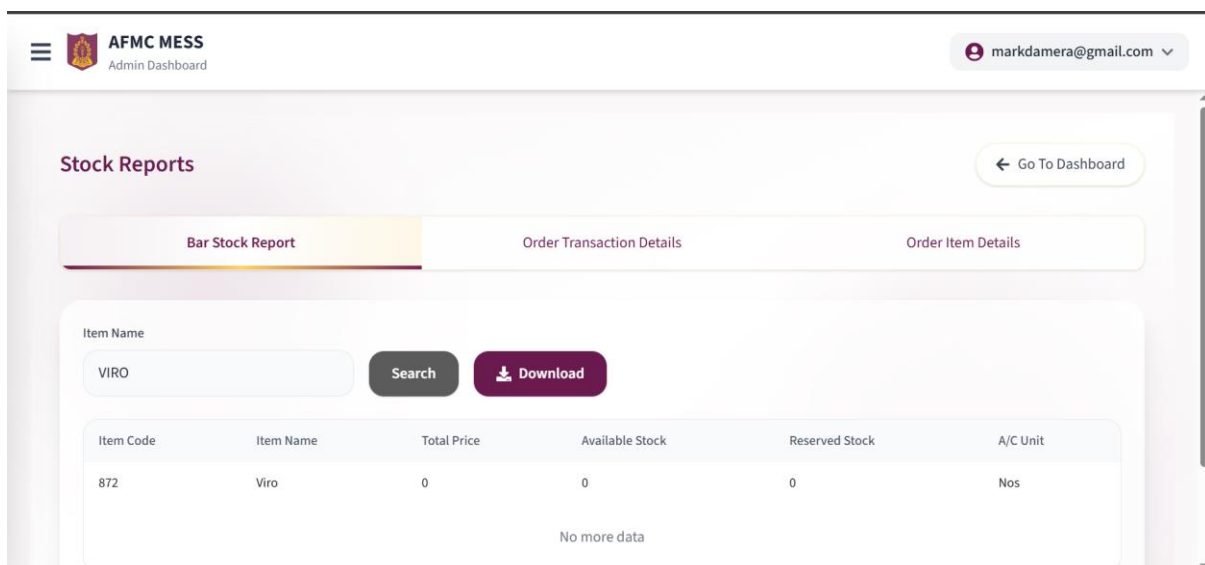

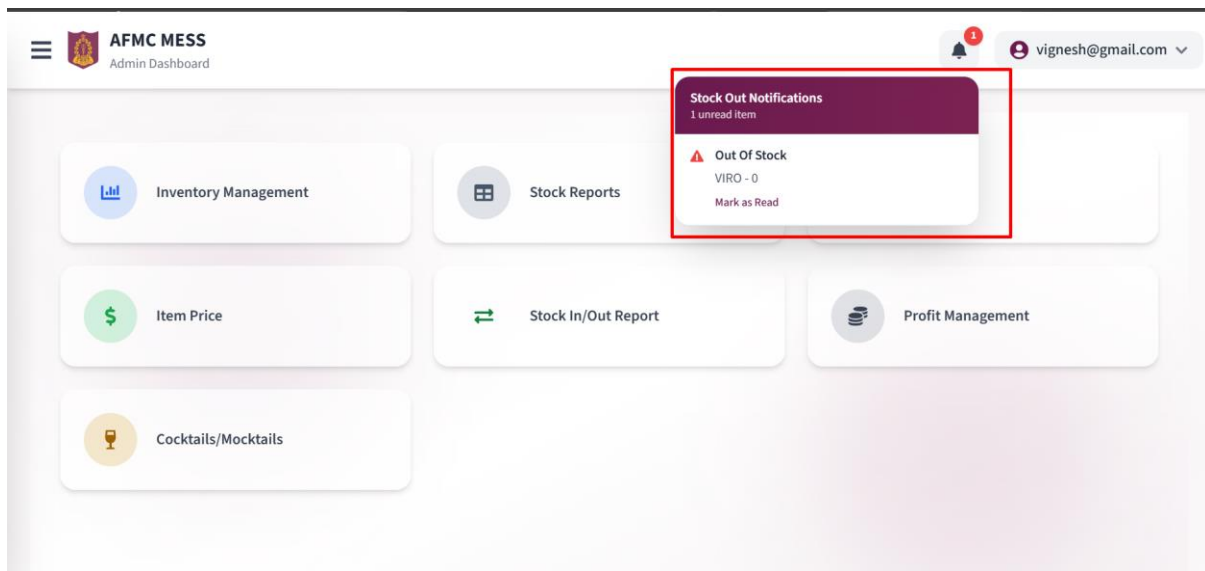

5.2.1 Out of stock Notification

When an item is sold out and its stock reaches **0**, the admin will receive a notification alert.

Upon clicking the **bell icon**, a pop-up window will appear displaying the details of the sold-out item.

By clicking on the **item name**, the admin will be redirected to the **Stock Reports** page to verify the current stock availability.

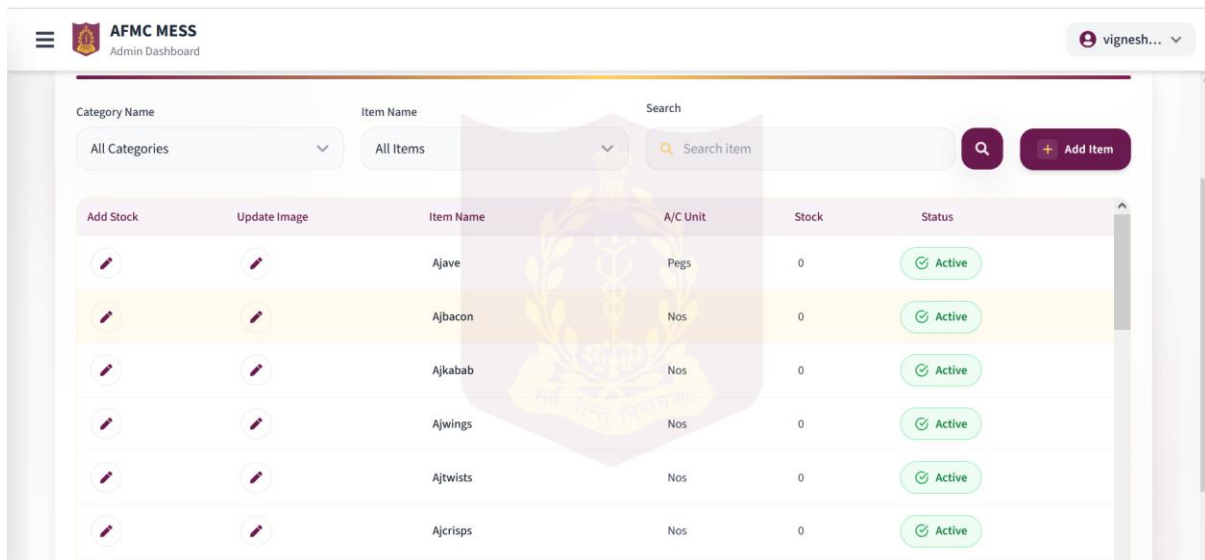

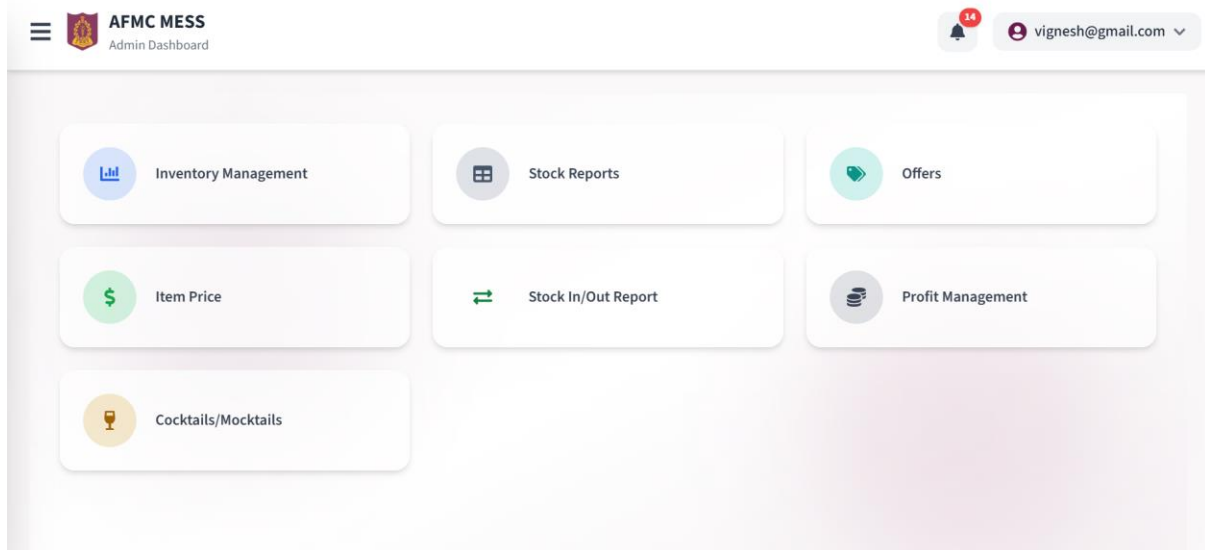

The admin also has the option to **mark the notification as read**

5.3 Inventory Management

The Inventory Management module allows administrators to create, view, update, and manage all food and beverage items available in the mess. This module is the foundation of the menu system and must be configured before end users can place orders.

Click on the inventory management card to navigate to inventory management screen.

5.3.0 Browsing and Filtering Inventory

The inventory listing displays all created items in the system. You can browse items by applying category filters and searching by item name using the available filter controls at the top of the page.

Figure 131: Category Filter - Liquor and Snacks

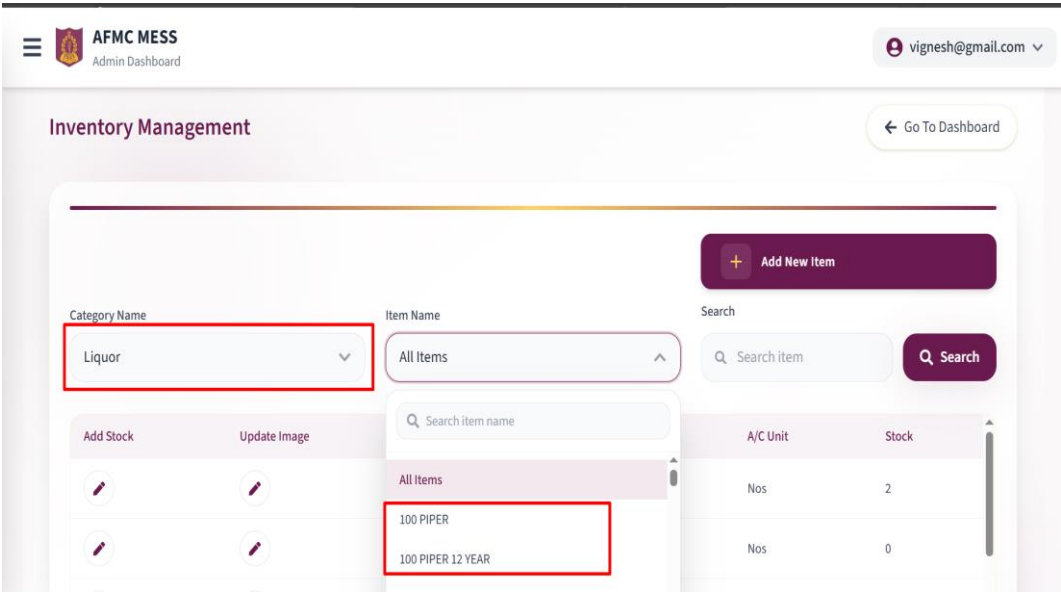

Figure 132: Item Name Filter Dropdown (LOV)

After selecting both a category and an item name from the dropdowns, the inventory listing will filter to display only the matching item. This allows targeted viewing of specific items.

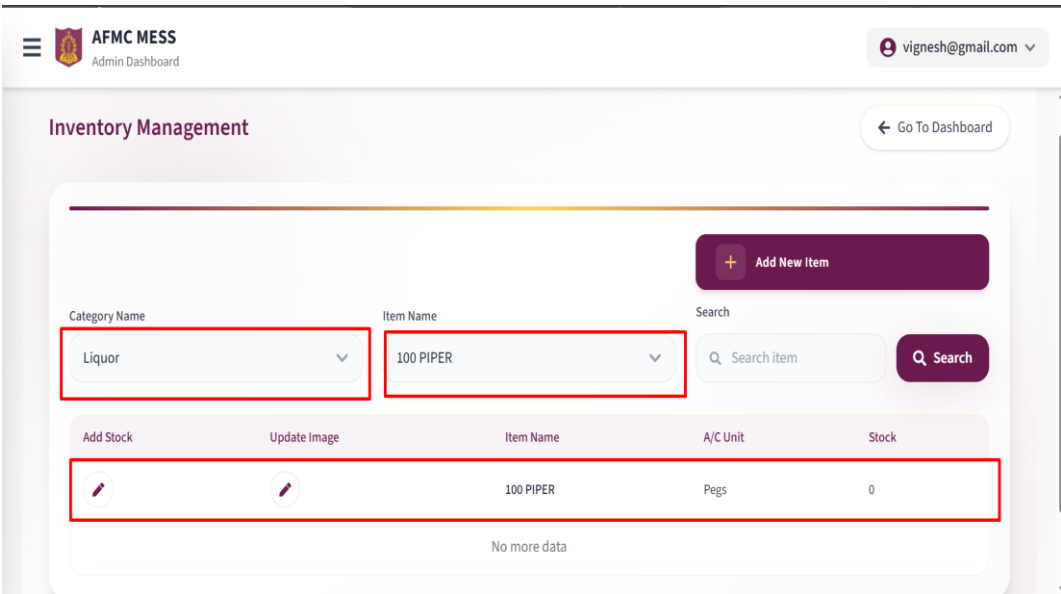

Figure 133: Filtered Inventory Result by Category and Item Name

Alternatively, use the Search field to search by item name. Enter the name in the text field and click the Search button. The listing will update to display all items matching the entered name.

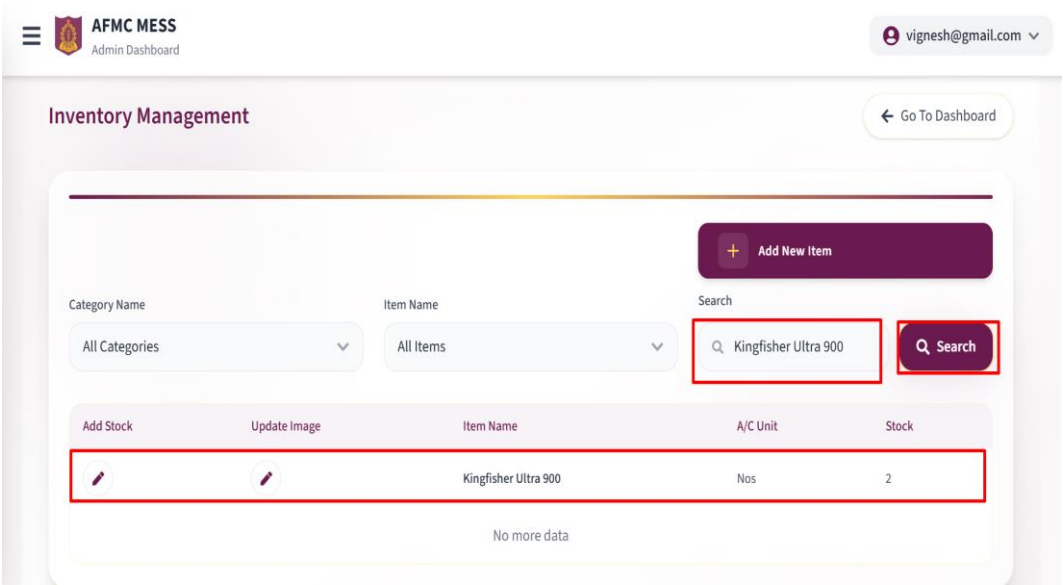

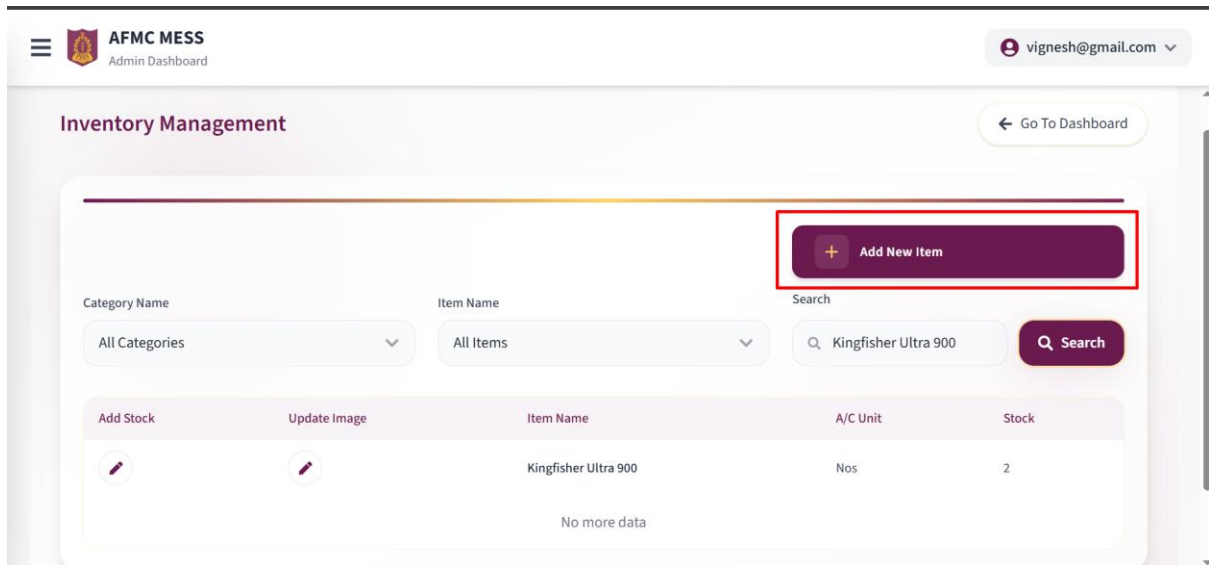

Figure 134: Searching Inventory by Item Name

5.3.1 Creating a New Item

To create a new menu item, navigate to the Inventory Management module from the dashboard. Click the Add new item button to open the item creation form. The system supports two primary categories:

32. Snacks: Food items including vegetarian and non-vegetarian options
33. Liquor: Beverage items including beer, brandy, whisky, rum, and other drink categories

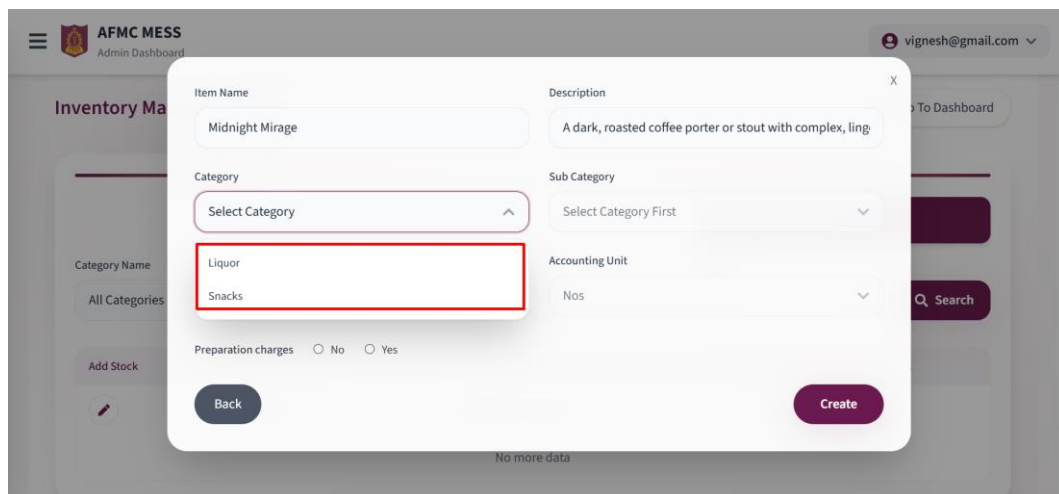

Figure 5: Selecting Item Category

After selecting the main category, choose the appropriate sub-category. For liquor items, available sub-categories include Beer, Brandy, Whisky, Rum, and other beverage types. For snack items, the sub-categories are Vegetarian (Veg) and Non-Vegetarian (Non-Veg).

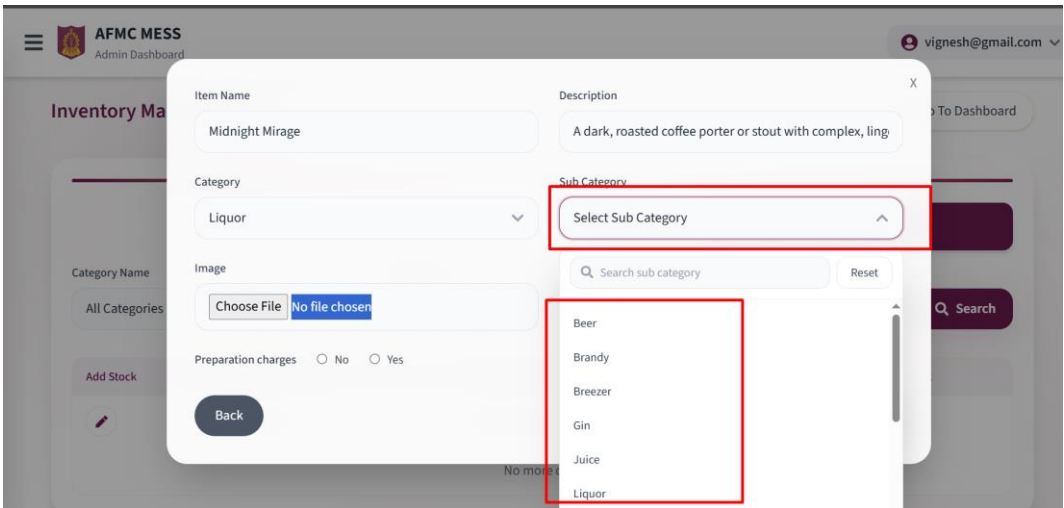

Figure 6: Liquor Sub-category Selection

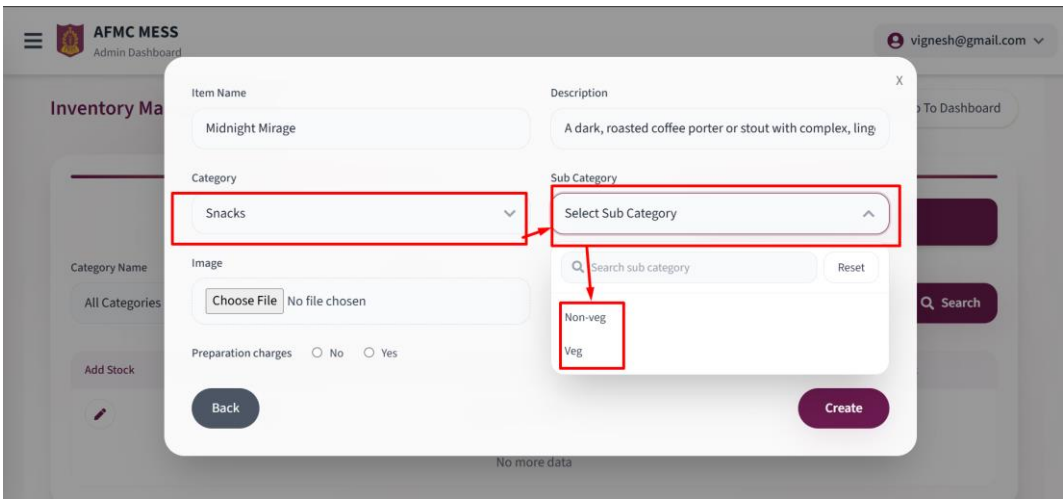

Figure 7: Snack Sub-category Selection

After selecting the category and sub-category, upload an item image by clicking the Choose File button. This will open a file browser dialog allowing you to select an image from your device. Once selected, the image filename will appear next to the button, confirming the selection.

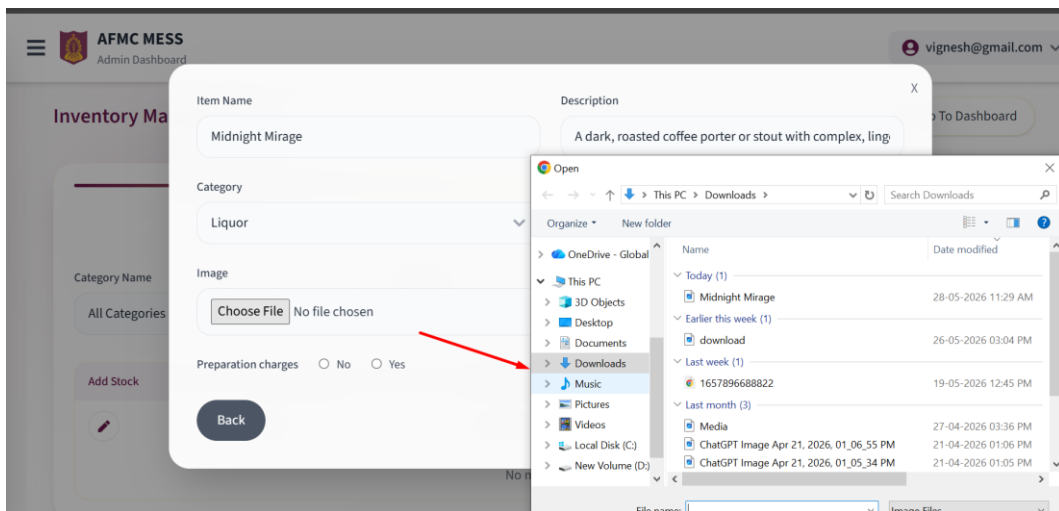

Figure 8: Uploading Item Image

The Preparation Charges field requires special attention. Select whether preparation charges are applicable for this item. If 'No' is selected, no preparation charge will be added to the item price. If 'Yes' is selected, the applicable preparation charge will be included in the final price calculation. This field is mandatory; attempting to create an item without specifying preparation charge applicability will result in a validation warning and the item will not be created.

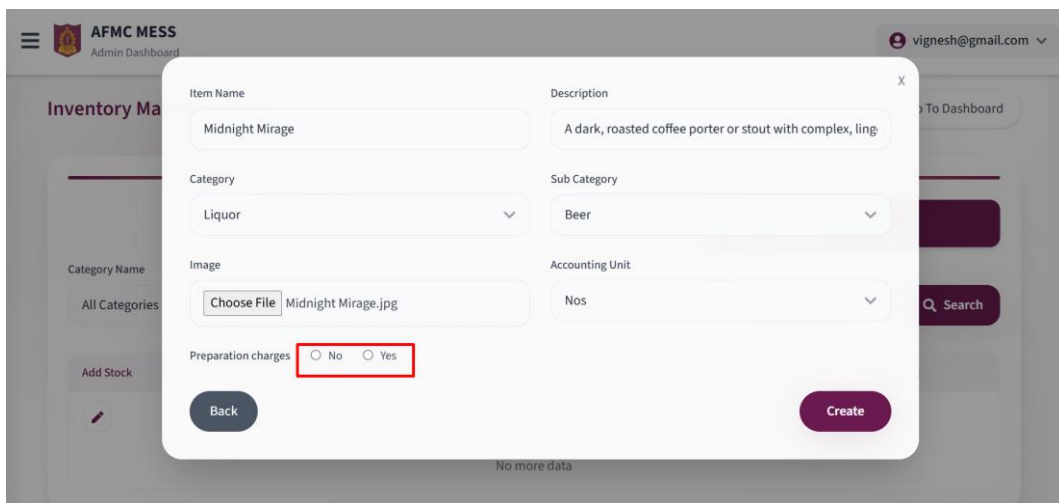

Figure 9: Setting Preparation Charges

After completing all required fields, click the Create button. The item will be created with an initial stock quantity of zero and you will be redirected to the Inventory Management listing page where the newly created item is displayed.

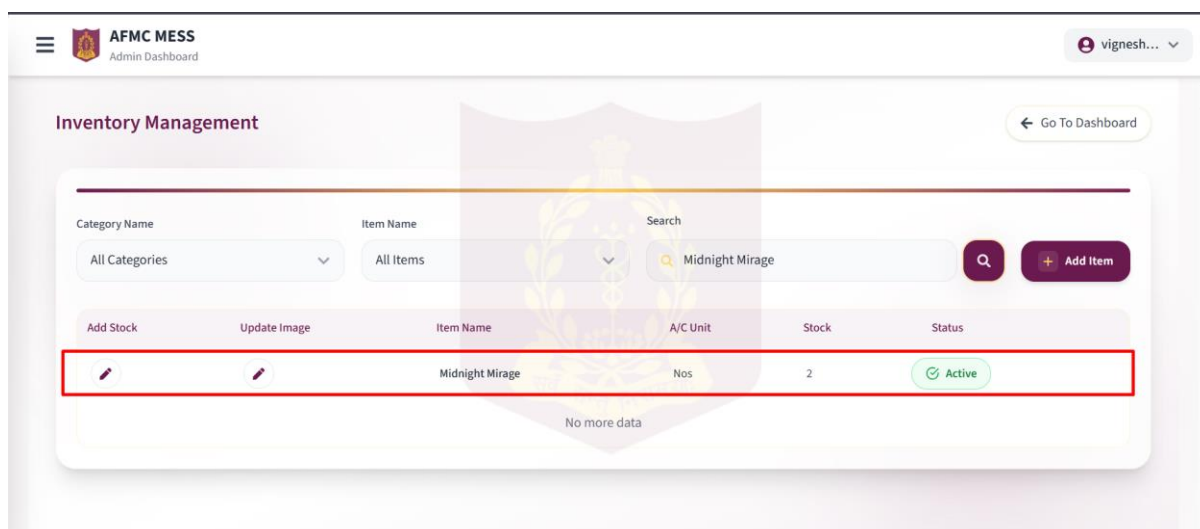

Figure 10: Inventory Management Listing Page

5.3.2 Updating Item Image

To update the image of an existing item, locate the item in the inventory listing and click the pencil icon under the Update Image column. This will navigate to the Update Image screen where you can view the current item name and existing image. Click Choose Image to select a new image from your device, then click Update to save the changes.

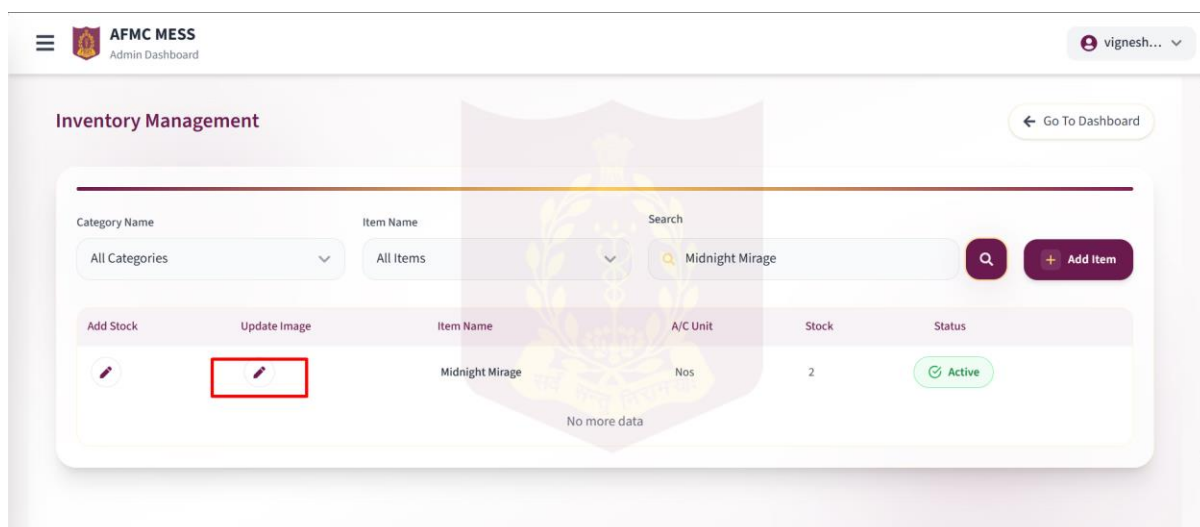

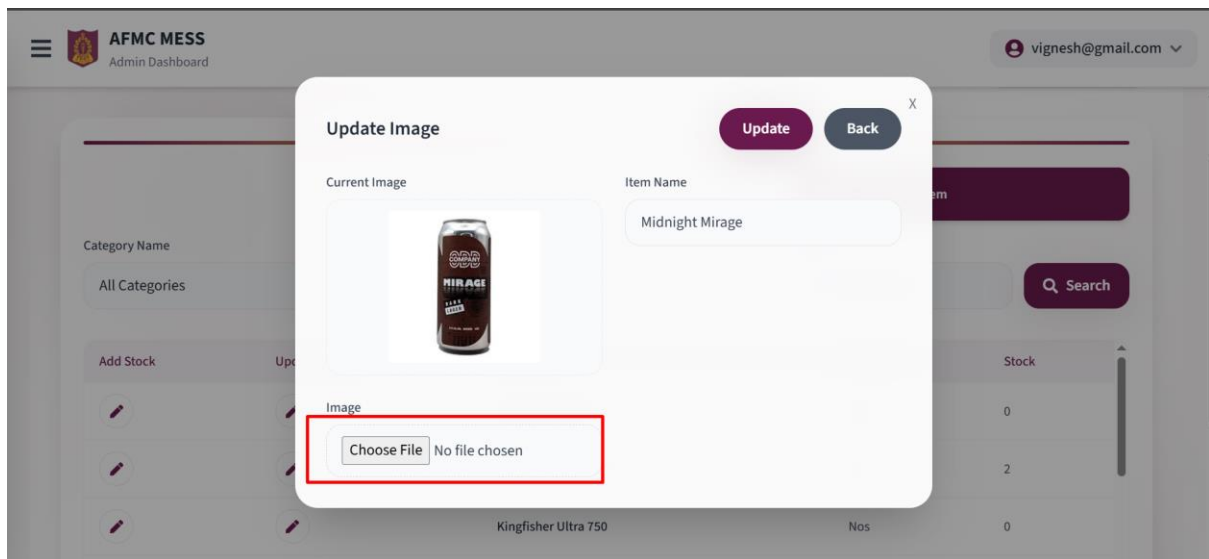

Figure 11: Updating Item Image

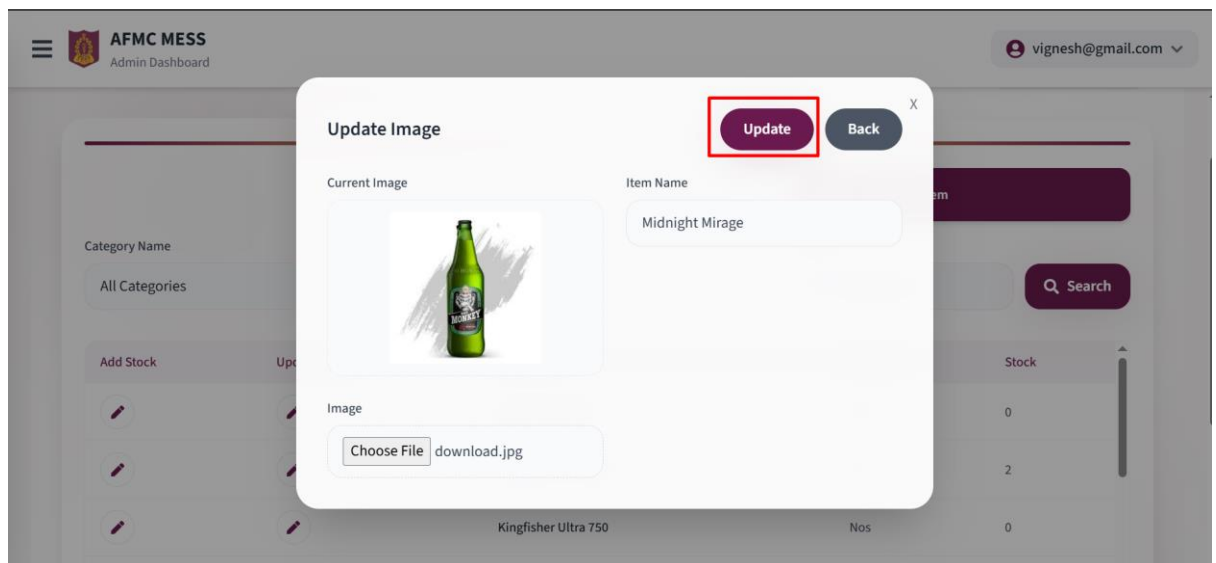

Click on the **pencil (edit) icon** to navigate to the **Update Image** screen.

After navigating to the update screen, the **item name** and the **existing image** will be displayed for reference.

To change the image, click on **Select Image / Choose Image**, browse and select the new image you want to upload.

Once the new image is selected, click on **Update**. The selected image will then be updated successfully.

To verify whether the update was applied correctly, open the edit screen again by clicking the **pencil icon** and check if the updated image is displayed.

5.3.3 Stock Addition

The Add Stock screen provides a form for entering stock details. For each item being added, the following information is required:

0. Item Selection: Enter the item's barcode or scan it using the barcode scanner
1. Purchase Type: Select Free (no cost) or Purchase (with cost)

2. Item Price: Enter the unit purchase price (for purchase type)
3. Unit Selling Rate: Enter the selling price per unit
4. Volume: Specify the quantity being added
5. Barcode: Assign or confirm the unique barcode for the item

Figure 124: Add Stock Interface

The barcode can be entered manually by typing the barcode number, or automatically by scanning the physical barcode using a connected scanner device. The system validates the barcode to ensure it corresponds to an existing inventory item.

Figure 125: Barcode Entry Methods

If applicable, preparation charges can be specified in the designated field. When items have associated preparation charges, these will be factored into the final selling price calculation.

Item Name: Midnight Mirage

Transaction Date: 28-05-2026

Type: Purchased

Unit Selling Rate: 190

Volume: 650

Barcode: Scan or type barcode

Preparation Charges: ☒ No ☐ Yes

Tip: After scanning, the row auto-stages when rate/date are filled.

Figure 126: Preparation Charges Field

5.3.4 Staging and Confirming Stock

After filling in the item details, click the Add button to stage the item in the summary table below. Multiple items can be added to the staging table before final submission. Review all entries carefully before proceeding.

Item Name: Midnight Mirage

Transaction Date: 28-05-2026

Type: Purchased

Unit Selling Rate: 190

Volume: 650

Barcode: 994956

Preparation Charges: ☒ No ☐ Yes

Tip: After scanning, the row auto-stages when rate/date are filled.

Figure 127: Staged Items in Summary Table

If an item was added incorrectly, click the Delete button next to that item in the staging table to remove it. After verifying all staged items are correct, click the Add Stock button to finalize the stock update.

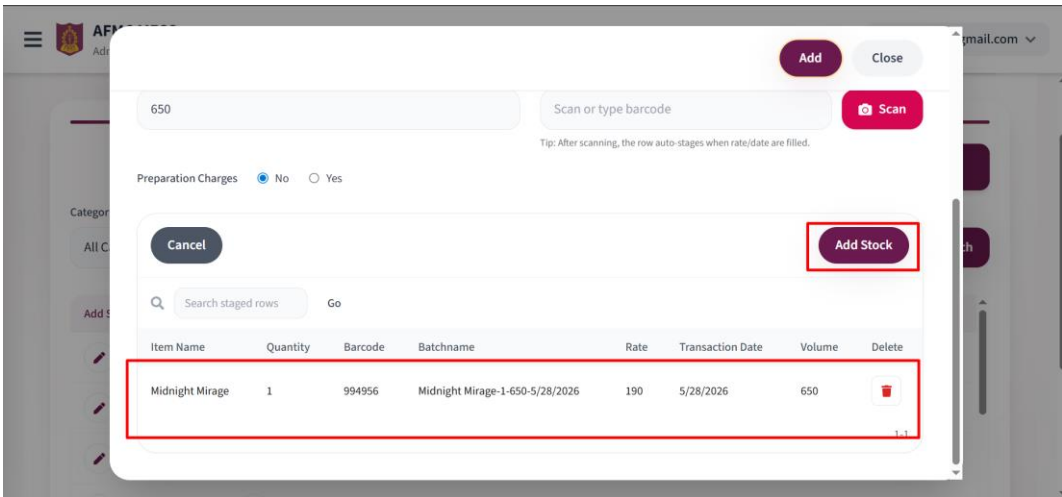

Figure 128: Confirming Stock Addition

Upon successful stock addition, the system will update the inventory records and redirect you to the Inventory Management page. The updated stock quantities will be immediately reflected in the item listing.

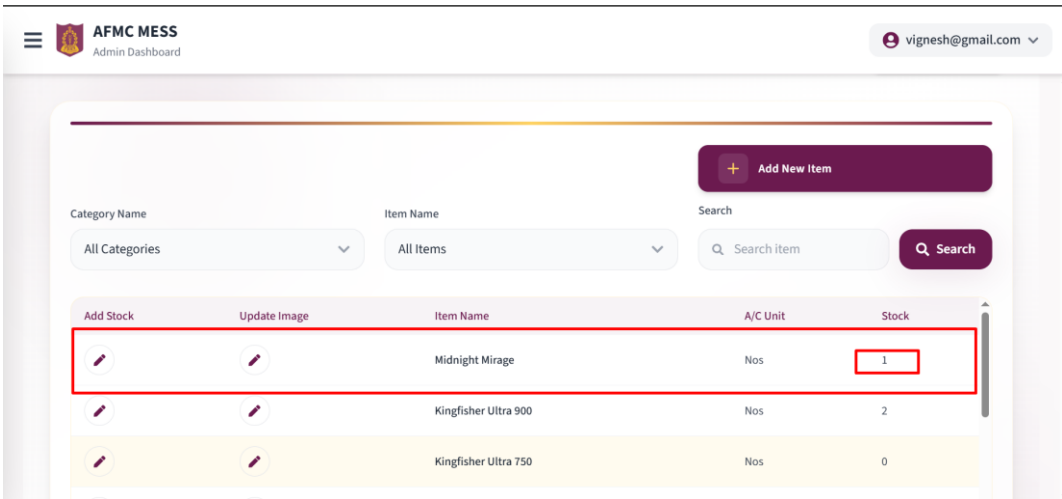

Figure 129: Updated Inventory with New Stock

After stock has been added, the items become available for end users to order. The out-of-stock indicators on the user menu will be removed, and the items will appear as active and selectable.

5.3.5 Making an Item Inactive

To make an item inactive, go to the Inventory Management section and select the item you want to deactivate from the inventory list. Once selected, you can view the current Status of the item.

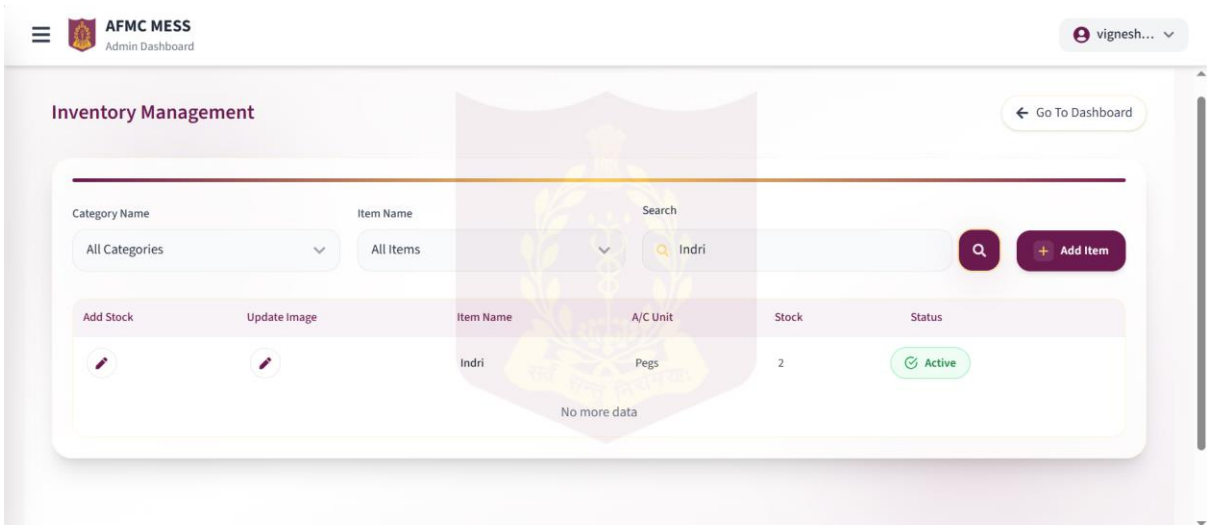

Figure 1: Searching for an item

If item is in active status, we can see it in the end user menu item that item.

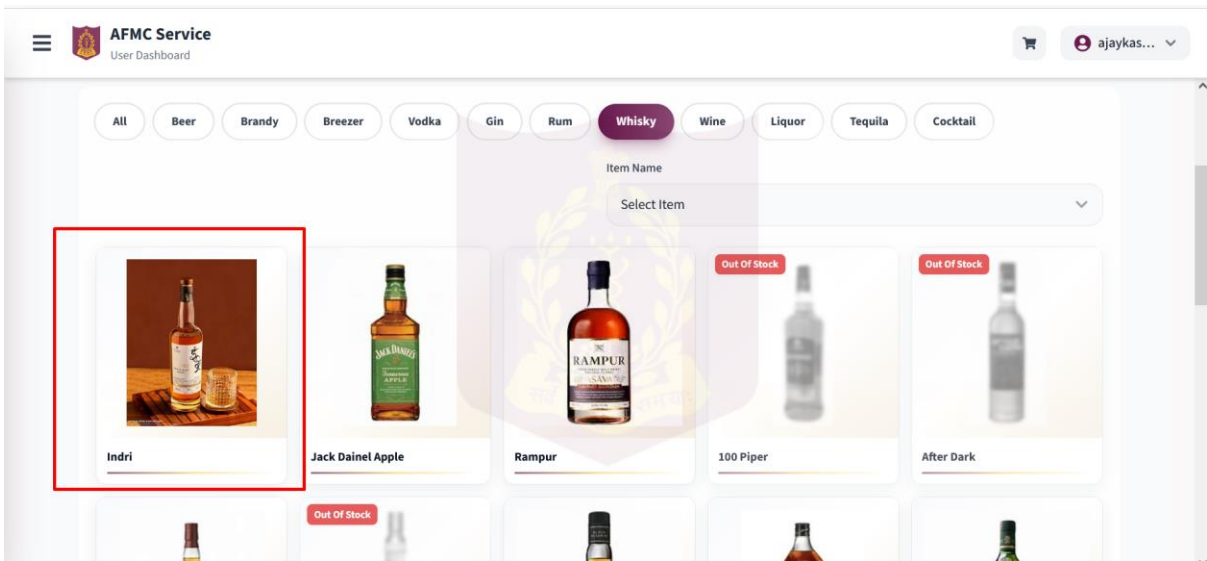

Figure 2: looking for an item that we want to make an inactive in user

To make an item inactive, click on the **Status** of the item in the Inventory Management list.

The item's status will then be updated to **Inactive**. You can verify the update by checking the status button, which will display **Inactive**.

This is how an item can be made inactive in the Inventory Management section.

Here we can see in the image.

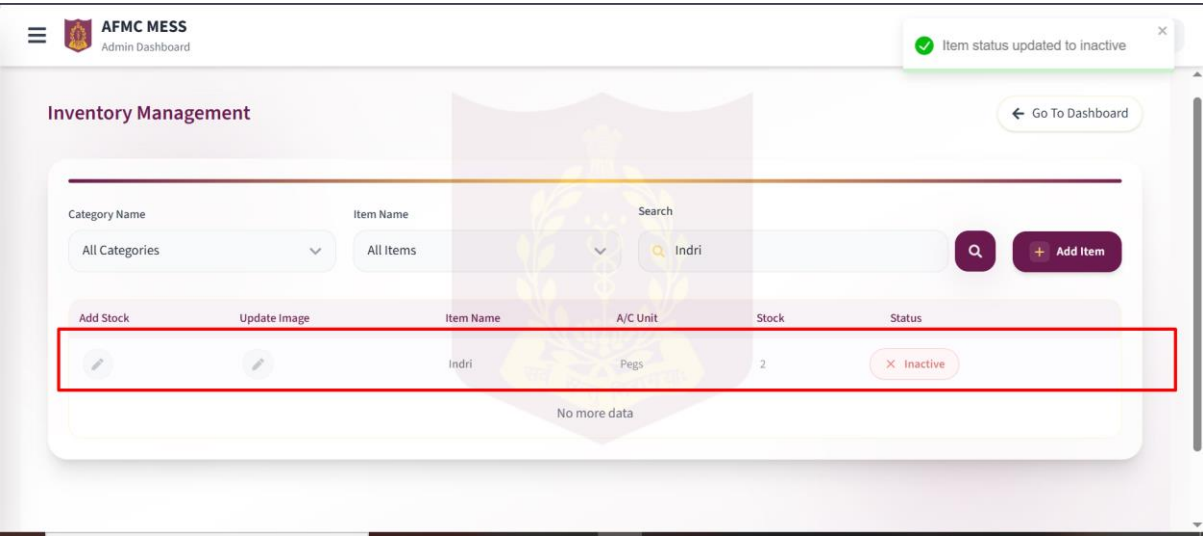

Figure3: Making an item to inactive

After updating the status to inactive we can't find the item in the user menu

Like this way we can make an item into inactive.

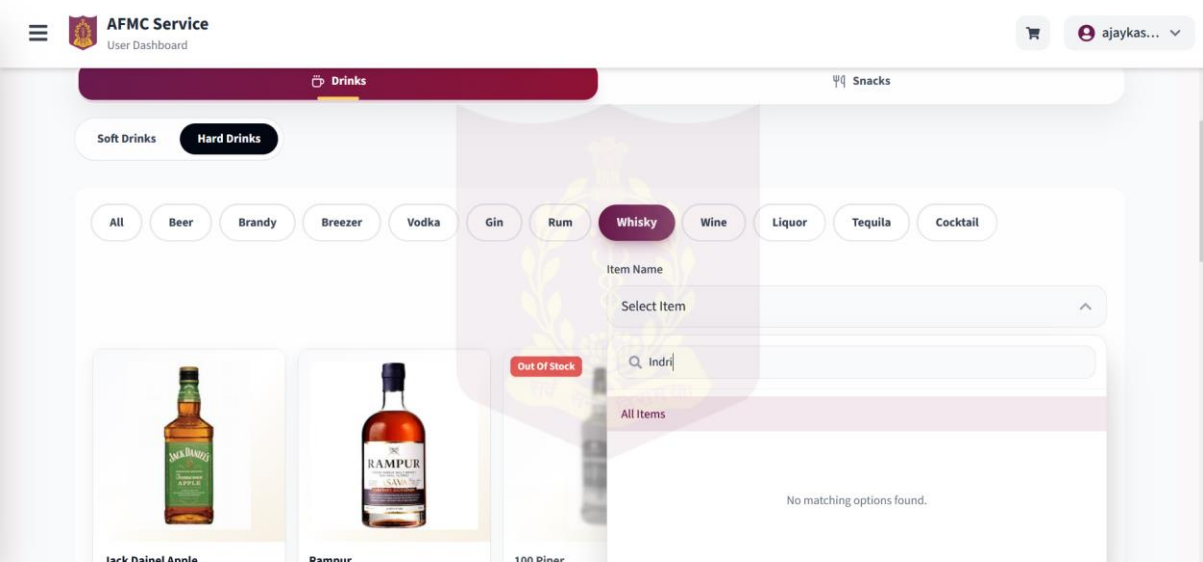

Figure4: Searching an item which is in inactive

5.3.6 Making an Item Active

Step 1: View the Inactive Item

In the Inventory Management section, locate the item whose status is currently Inactive, as shown in the screenshot below.

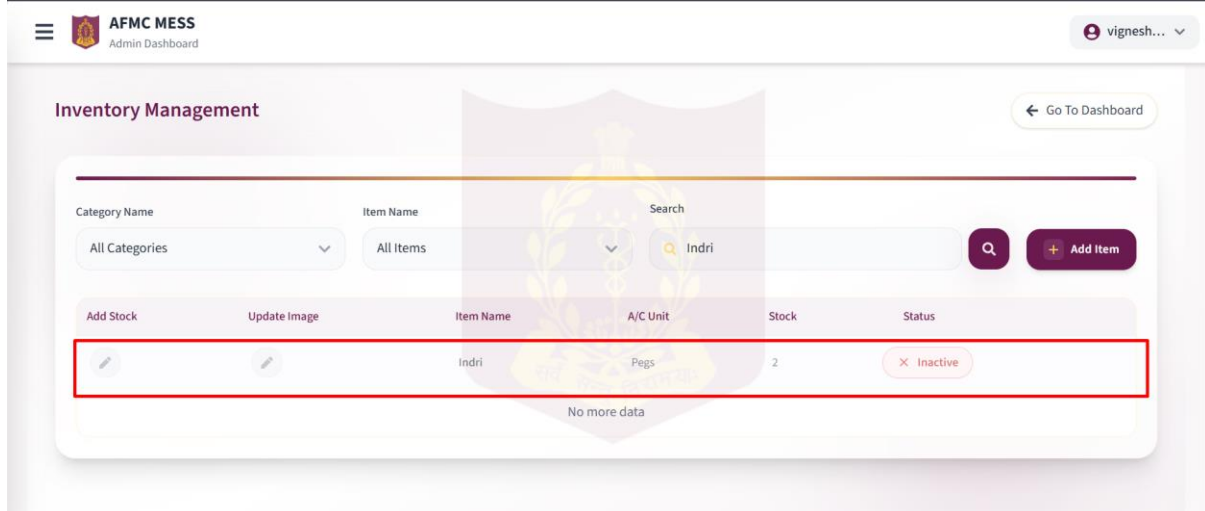

Figure1: Searching an item which is in inactive

Step 2: Update the Item Status

Click on the Inactive status button to change the status of the item to Active.

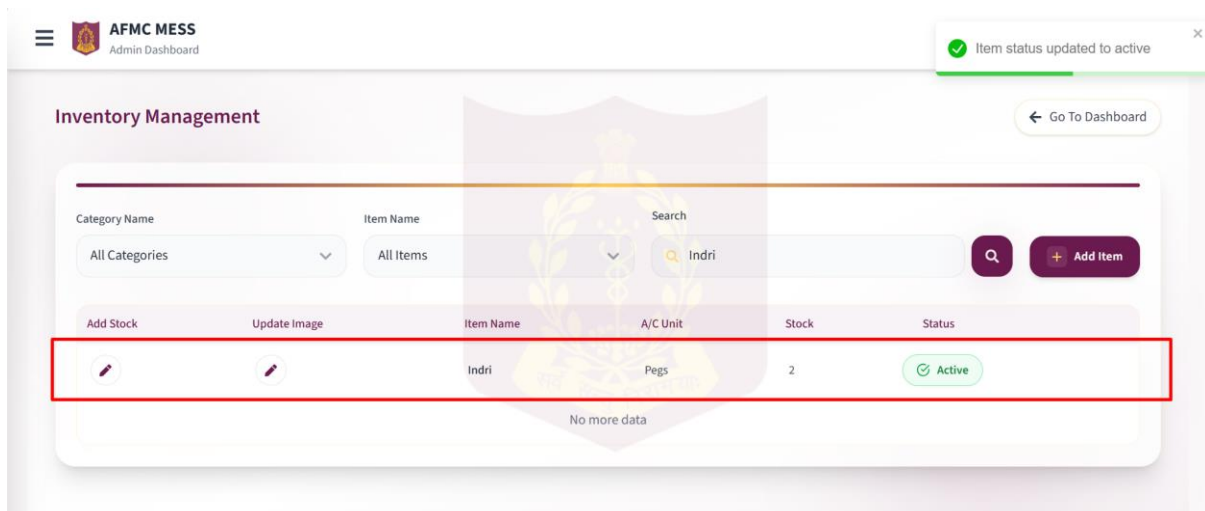

Figure2: Making an item active

Step 3: Verify the Active Item

Once the status is successfully updated, the item will become Active and will be available in the Menu.

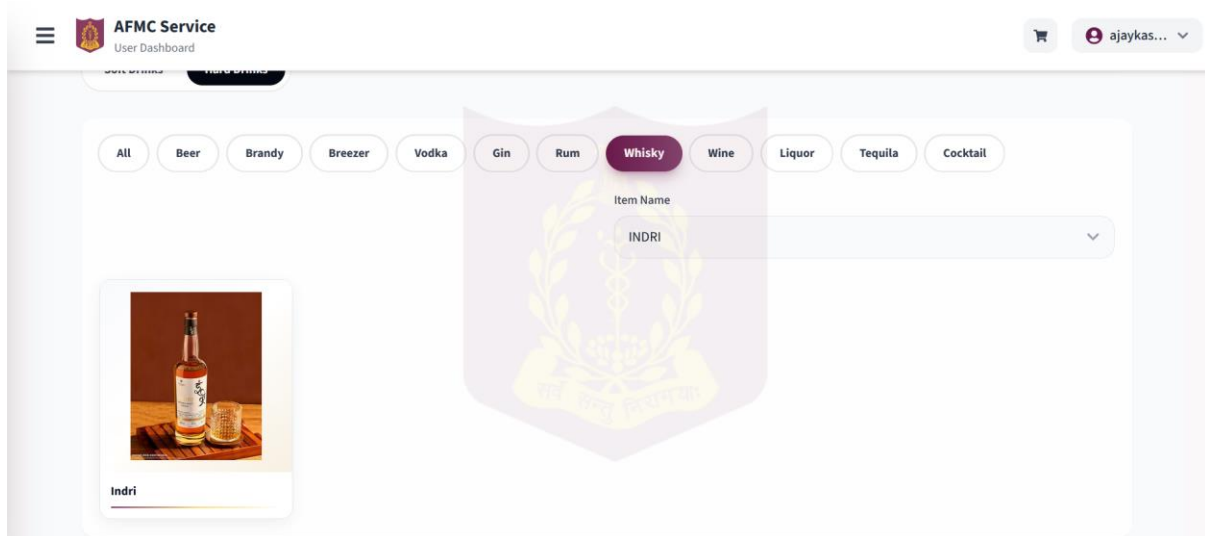

Figure3: Searching an item which we made active

5.4 Reports

The Reports module provides comprehensive analytics and data export capabilities for all mess operations. Administrators can generate, filter, search, and download reports in PDF format for record-keeping and analysis purposes.

5.4.1 Stock Reports

The Stock Reports section provides detailed transaction-level visibility into inventory movements. Navigate to Stock Reports from the Reports card on the dashboard. The report displays item-related data including stock sent to the bar, order quantities by order number, and complete order transaction details.

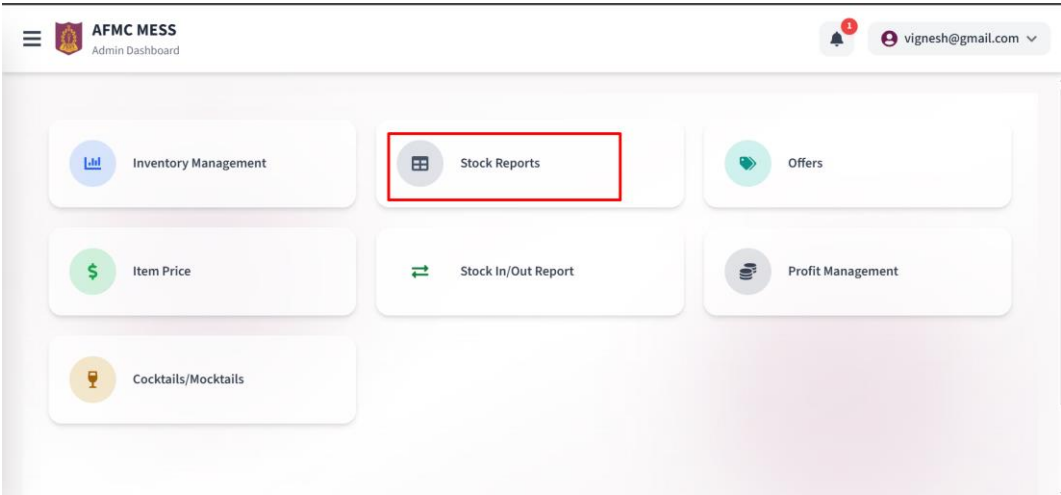

Figure 12: Stock Reports Overview

The Order Transaction Details section shows individual order data with quantities and timestamps. The Order Item Details section aggregates total items sold across all orders, providing a comprehensive view of product movement. Use the search functionality to filter items by name for targeted analysis.

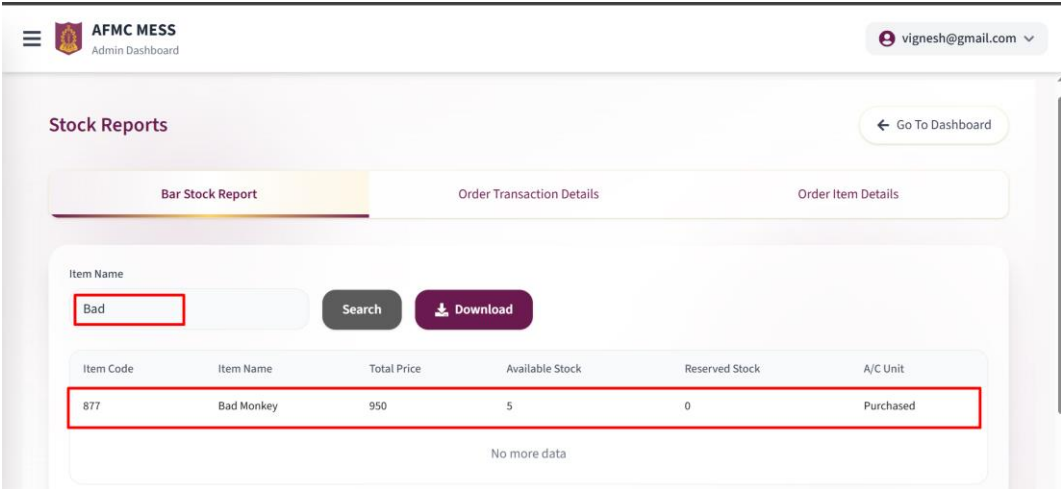

Figure 13: Searching Stock Reports by Item Name

To download a report, apply the desired filters (date range, item name, etc.) and click the Download button. The system will generate a PDF containing only the filtered data. The downloaded file will appear in your browser's notification area or downloads folder.

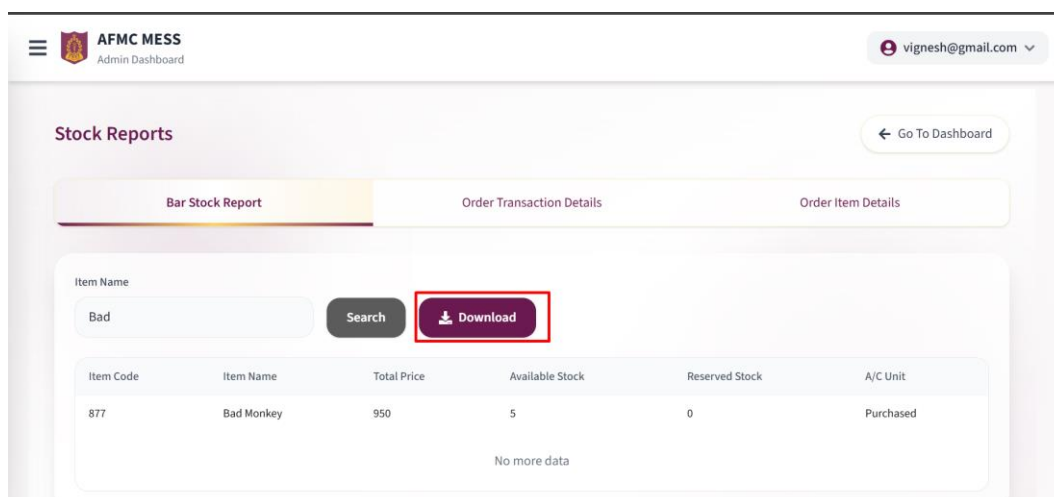

Figure 14: Downloading Filtered Stock Report

5.4.2 Bar Stock Reports

The Bar Stock Reports provide dedicated visibility into bar inventory status. This report displays item details including price, available stock, and reserved stock quantities. Reserved stock represents items that have been ordered by users but not yet fulfilled by the kitchen staff.

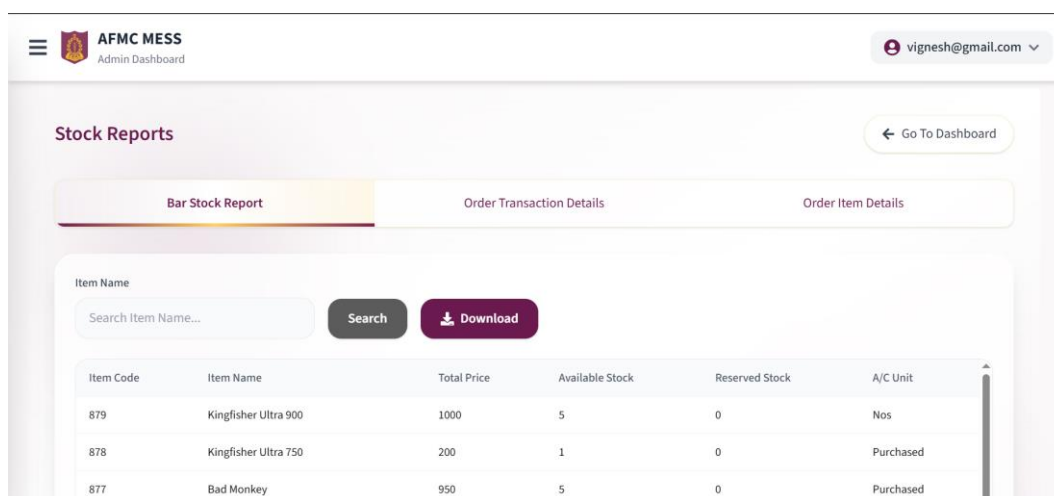

Figure 15: Bar Stock Report Overview

Use the item name search field to locate specific products. The report can be filtered and downloaded in PDF format for offline analysis and record-keeping purposes.

5.4.3 Order Transaction Details

The Order Transaction Details report provides comprehensive order-level information including order numbers, dates, user details, item quantities, and transaction amounts. Filter the data by date range using the From and To date selectors, or search by specific order number for targeted queries.

Figure 17: Filtering by Item Name and Username

5.4.4 Order Item Details

The Order Item Details report aggregates sales data at the individual item level, showing total quantities ordered, per-unit profit margins, and total revenue by item. This report is essential for understanding product performance and optimizing the menu offering.

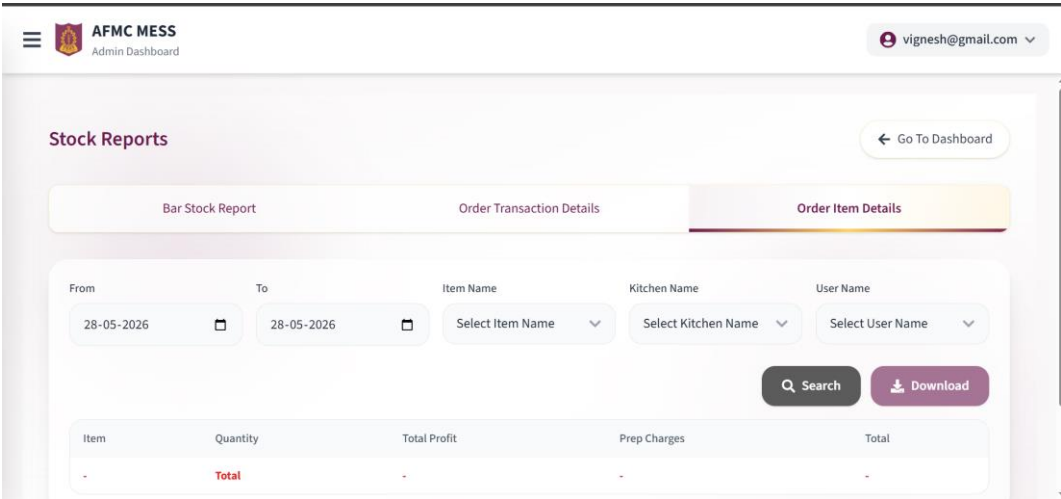

Figure 18: Order Item Details Report

Filter the data by date range to analyse performance within specific periods. Search by item name, kitchen type, and username for granular analysis. The filtered report can be downloaded as a PDF for sharing and archival purposes.

5.5 Offers Management

The Offers Management module enables administrators to create, manage, and deactivate promotional offers. Currently, the system supports Buy-X-Get-Y style offers where customers receive a free item when purchasing a qualifying item in specified quantities.

5.5.1 Viewing Existing Offers

Click the Offers card on the dashboard to navigate to the Offer Management screen. The overview displays summary statistics including total offers created, total active offers, and total inactive offers. Existing offers are listed in a table showing the original item, free item, offer message, and status.

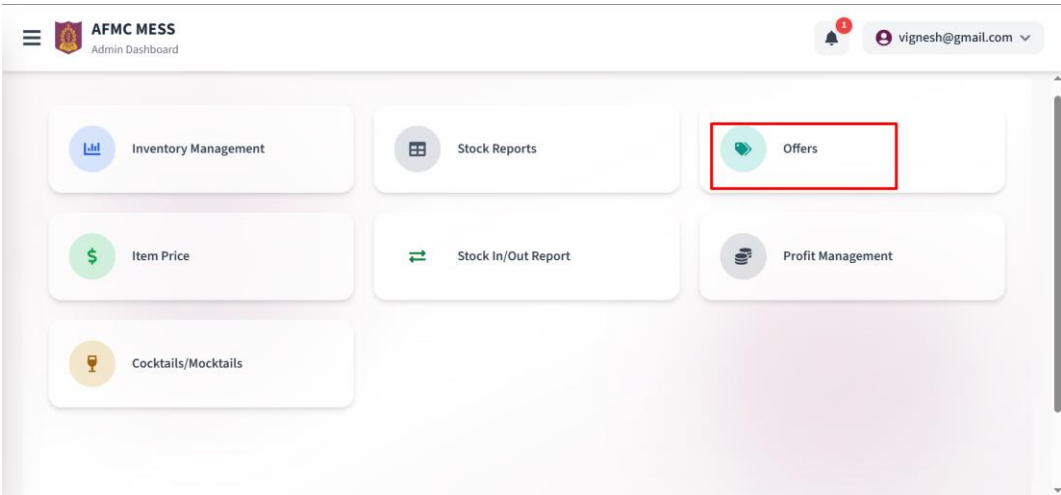

Figure 19: Offers Management Dashboard

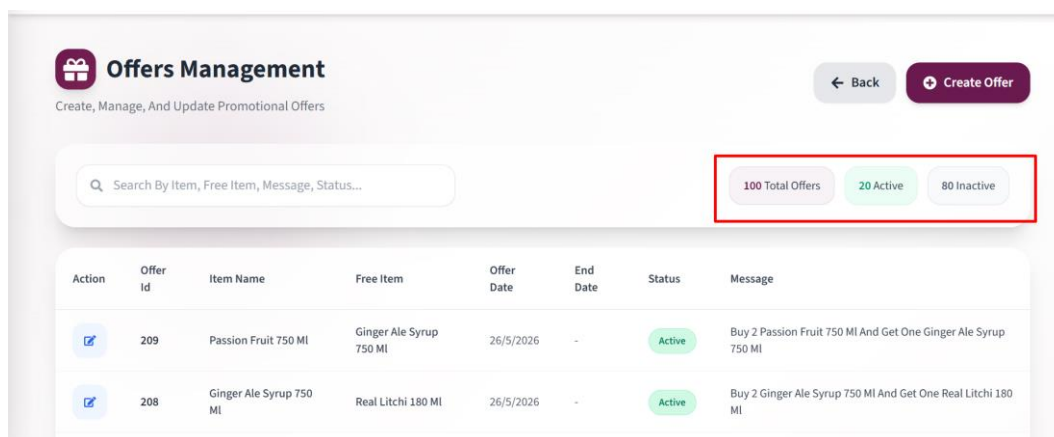

Figure 20: Existing Offers List

5.5.2 Searching Offers

Use the search functionality to locate specific offers by item name or offer message text. Enter the search term and click Search to filter the results.

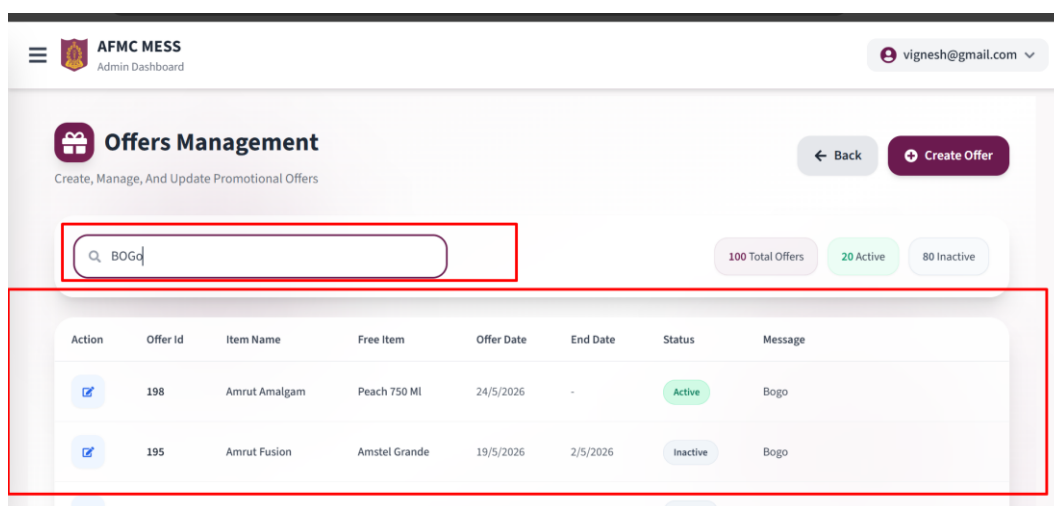

Figure 21: Searching Offers

5.5.3 Creating a New Offer

To create a new offer, click the Create Offer button. You will be navigated to the offer creation screen where the following information must be provided:

6. Original Item: Select the qualifying purchase item from the dropdown list
7. Original Item Quantity: Enter the quantity required to trigger the offer
8. Free Item: Select the complimentary item from the dropdown list
9. Free Item Quantity: Enter the quantity of the free item to be given
10. Offer Message: Enter the promotional text that will be displayed to users (e.g., "Buy 2 Get 1 Free")

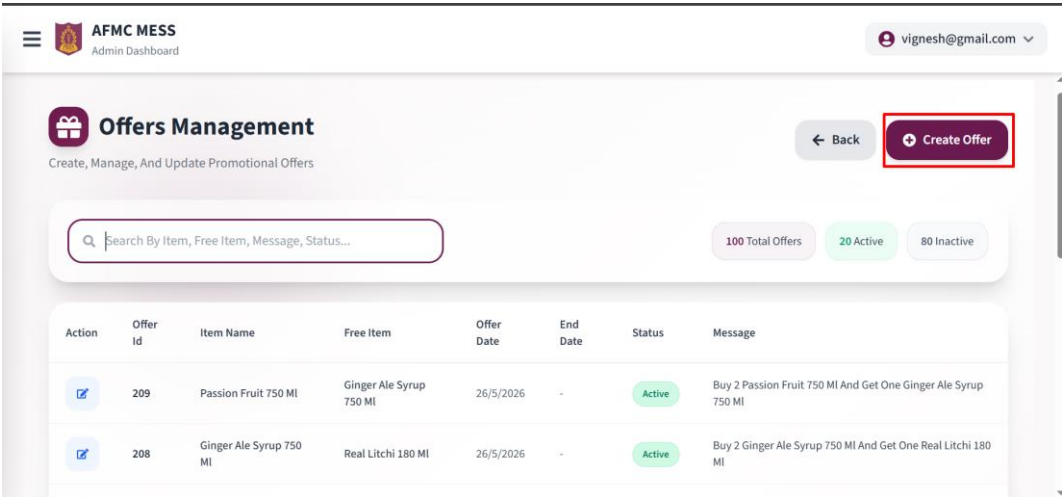

Figure 22: Create Offer Screen

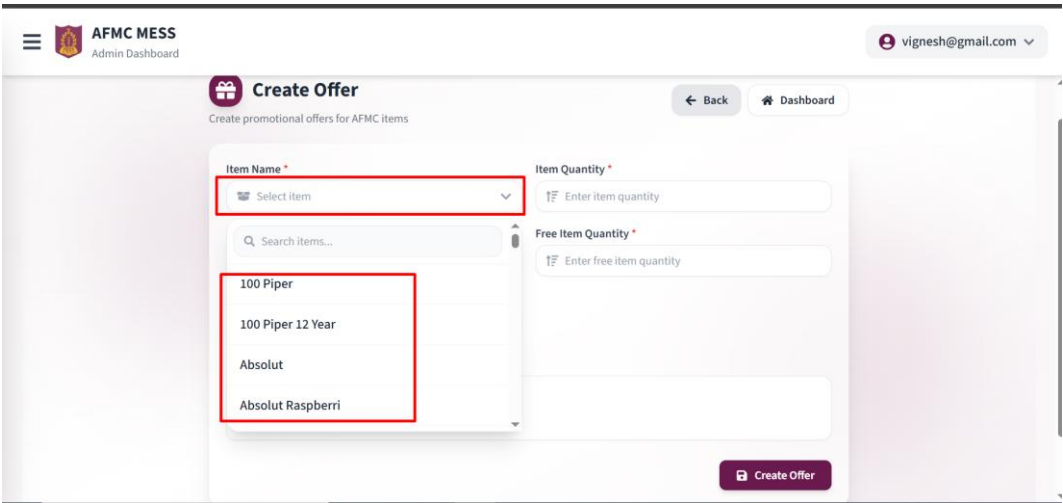

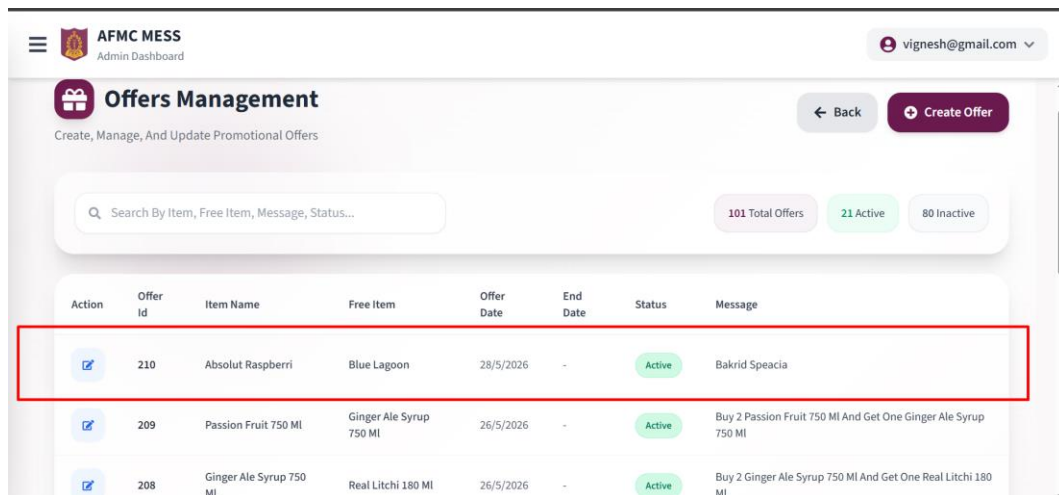

Figure 23: Offer Creation Form

After entering all required details, click the Create button. A success message will confirm the offer creation, and you will be redirected back to the Offer Management page where the new offer will be listed.

5.6 Item Price Management

The Item Price module enables administrators to update the selling price of existing inventory items. Navigate to the Item Price card from the dashboard to access the price management screen.

To update an item's price, scan or manually enter the item's barcode. The system will automatically fetch the item name and current price. Enter the new selling price in the designated field and click Save to apply the changes. The system will redirect back to the dashboard upon successful update.

5.7 Stock In/Out Reports

The Stock In/Out Reports module tracks all inventory movements, including stock additions (stock in) and stock depletions (stock out). This provides a complete audit trail for inventory management purposes.

5.7.1 Stock In Report

Select the Stock In/Out Reports card from the dashboard and navigate to the Stock In tab. This report displays all stock addition transactions within a specified date range. Use the date filter to narrow results to specific periods.

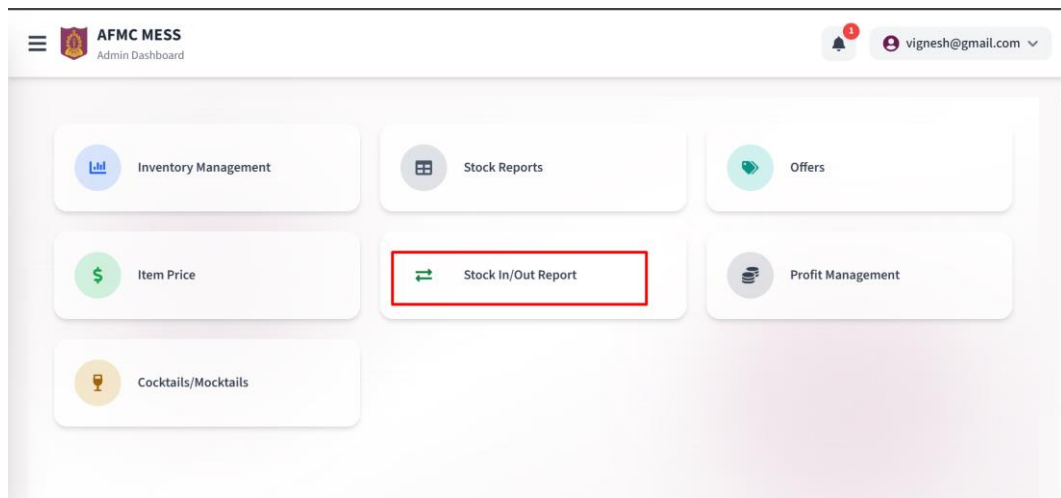

Figure 30: Stock In/Out Reports Selection

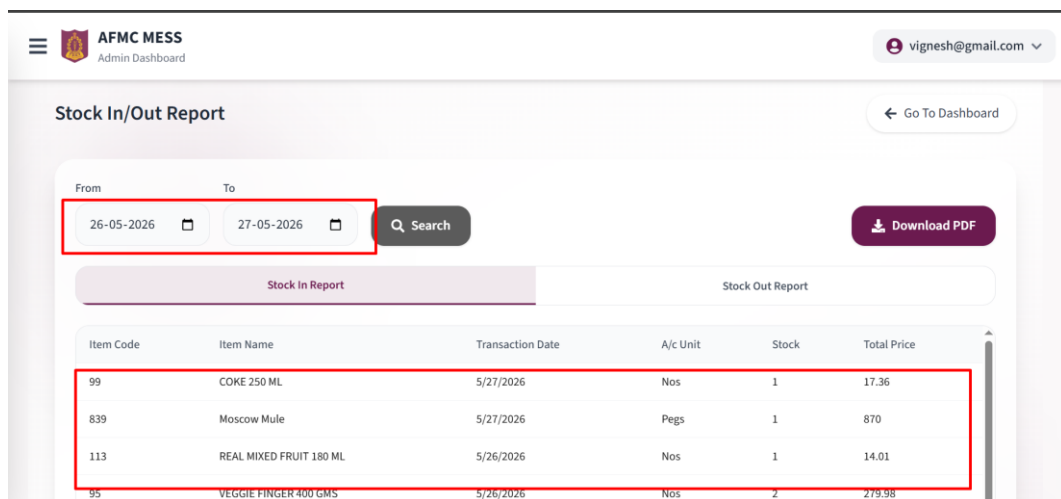

Figure 31: Stock In Report with Date Filtering

After filtering the report by date range, click the Download button to export the filtered data as a PDF document.

5.7.2 Stock Out Report

The Stock Out report displays all inventory depletion transactions, including stock transferred to the bar and stock consumed through order fulfillment. Filter by date range and download as PDF for record-keeping.

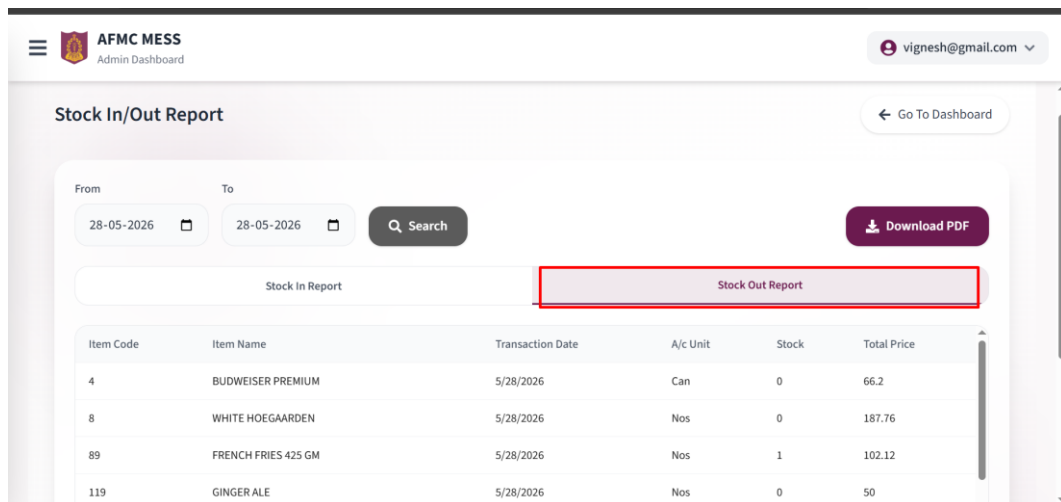

Figure 32: Stock Out Report

5.8 Profit Management

The Profit Management module allows administrators to configure profit margins for inventory items on a category basis. Different profit rates can be set for members and non-members, and separate configurations exist for snack items (which include food preparation charges) and liquor items (which do not have preparation charges).

Navigate to the Profit Management card from the dashboard. Select the category for which you want to configure profit margins. For snack categories, enter both the food preparation charges and the profit percentage. For liquor categories, enter only the profit percentage as preparation charges do not apply.

5.9 Cocktail / Mocktail Management

The Cocktail/Mocktail Management module provides specialized tools for creating and managing custom mixed drink items. Unlike standard inventory items, cocktails and mocktails are composed of multiple ingredients in specific proportions.

5.9.1 Viewing Existing Items

Click the Cocktail/Mocktail card on the dashboard to view the management screen. Existing items are displayed in a searchable list showing the item name, sub-category (Cocktail or Mocktail), ingredient count, and price. Use the search field to filter items by name.

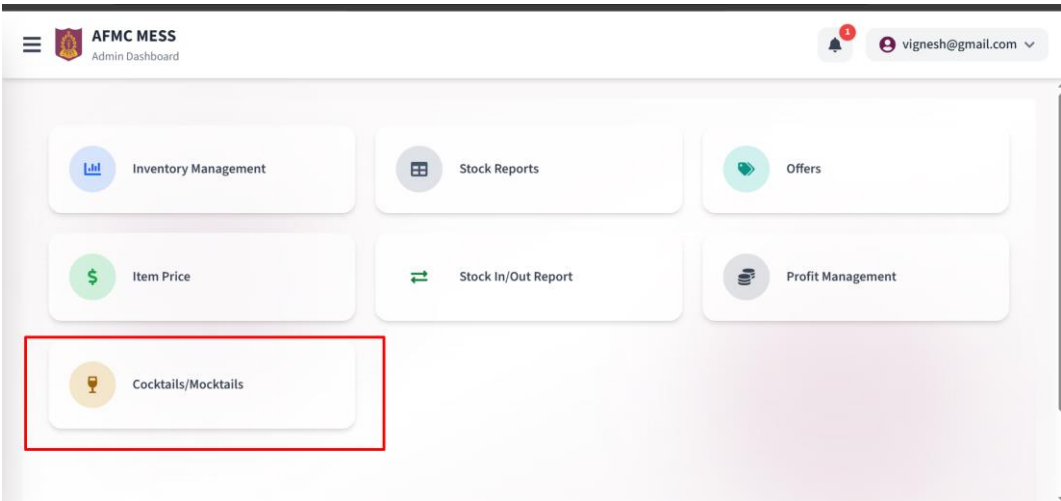

Figure 37: Cocktail/Mocktail Management Screen

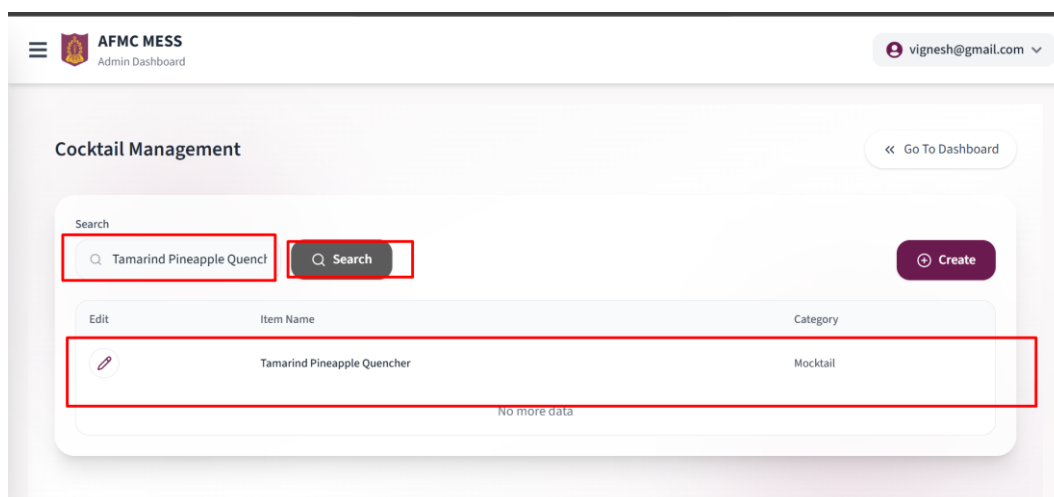

Figure 38: Searching Cocktail/Mocktail Items

5.9.2 Creating a Cocktail/Mocktail

Click the Create button to begin creating a new cocktail or mocktail. Complete the form with the following information:

11. Select sub-category: Choose Cocktail or Mocktail from the dropdown
12. Item Name: Enter a unique name for the new item
13. Upload Image: Select an image file to represent the item
14. Preparation Charges: Specify whether preparation charges apply
15. Profit Percentage: Enter the desired profit margin

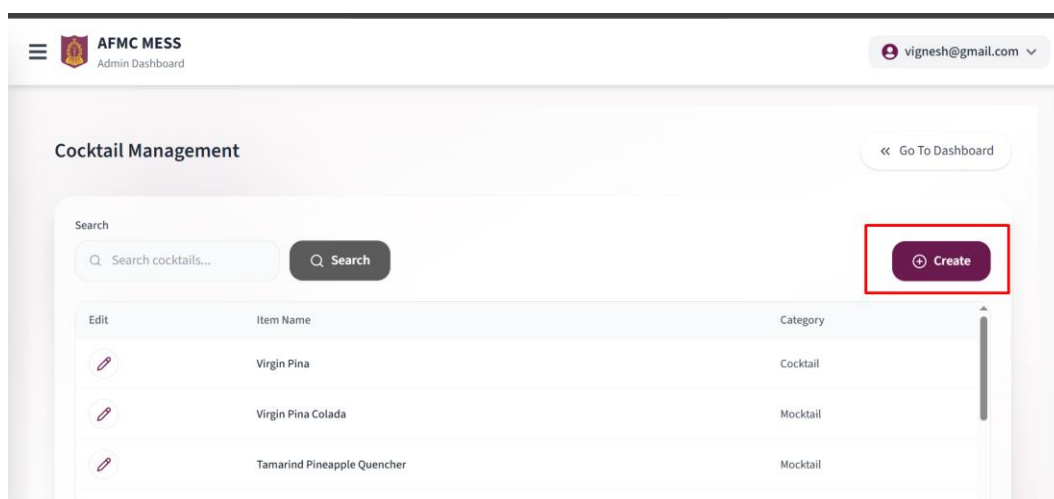

Figure 39: Cocktail/Mocktail Creation Form

After completing the basic information, add ingredients using the ingredient management table. Click Add Row to add a new ingredient entry. For each ingredient, select the item from the dropdown

list and specify the quantity in peps. The price will be automatically calculated based on the ingredient quantities and individual item prices.

The screenshot shows the 'Create Cocktail/Mocktail' form in the AFMC MESS Admin Dashboard. The form has several input fields: 'Item Name', 'Description', 'Member Profit', and 'Member Pr Charges'. A dropdown menu for 'Sub Category' is open, showing options for 'All', 'Cocktail', and 'Mocktail'. The 'Cocktail' option is highlighted with a red box. There are also search bars for 'Ingredients' and 'All Text Columns', and an 'Add Row' button.

Figure 40: Selecting Cocktail/Mocktail Sub-category

The screenshot shows the 'Create Cocktail/Mocktail' form in the AFMC MESS Admin Dashboard. The form is filled with 'Gimlet' as the item name, 'Cocktail' as the sub-category, and 'Gimlet.jpg' as the image. There are four input fields for quantities, each with the value '2'. The 'Add Row' button is highlighted with a red box. Below the form is a table with columns: #, Item Code, Item Name, Peps, Member Price, Non Member Price, and Delete Row.

Figure 41: Adding Ingredients to Cocktail

You can add multiple ingredients by clicking Add Row for each additional component. To remove an ingredient, click the Delete button next to the respective row. When all ingredients are configured, click the Create button to finalize the cocktail/mocktail creation.

#	Item Code	Item Name	Pegs	Member Price	Non Member Price	Delete Row
1	43 - Absolut Raspberri	Absolut Raspberri	1	2688	2712	Delete
2	841 - Alnwick	Alnwick				Delete

Figure 42: Specifying Ingredient Quantities

5.9.3 Editing a Cocktail/Mocktail

To modify an existing cocktail or mocktail, click the edit icon next to the item in the list. You can add new ingredients, remove existing ingredients, or adjust quantities as needed. After making changes, click Save to update the item.

Edit	Item Name	Category
	Gimlet	Cocktail
	Mocktail Test SAI	Mocktail
	Cocktail Test SAI	Cocktail

Figure 43: Editing Cocktail/Mocktail Ingredients

5.10 Stock Transfer (Add Stock)

The Add Stock module enables administrators to transfer inventory from the main store to the bar (stock out) and to add new stock to existing items (stock in). This module is critical for maintaining accurate inventory records across all locations.

5.10.1 Adding Stock to Bar

Navigate to the Add Stock option from the sidebar menu. The Add Stock screen displays the current inventory and provides tools for transferring stock. Enter the barcode of the item you wish to transfer and click Add. The item details will appear in the staging table below.

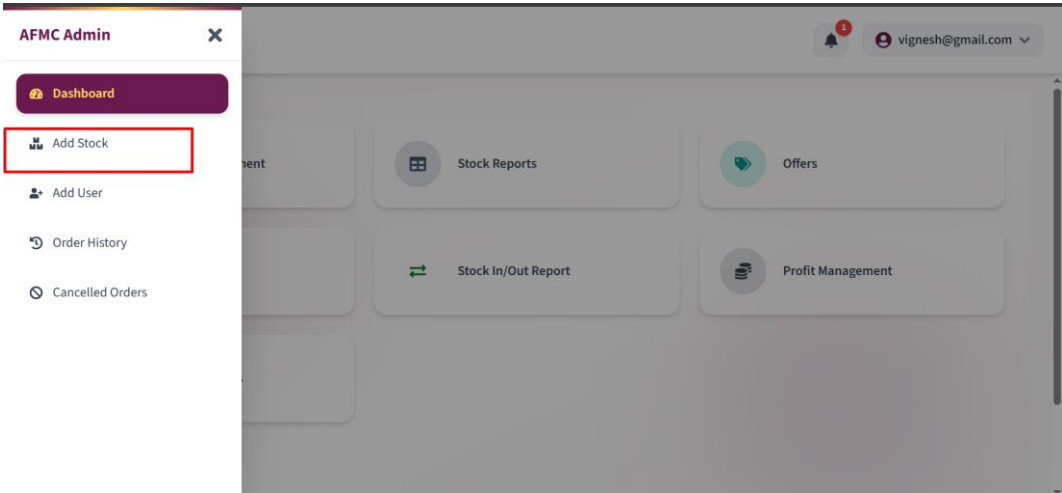

Figure 44: Add Stock Interface

After adding all required items to the staging table, click the Finish button to complete the stock transfer. The system will update the inventory records and confirm the successful transfer.

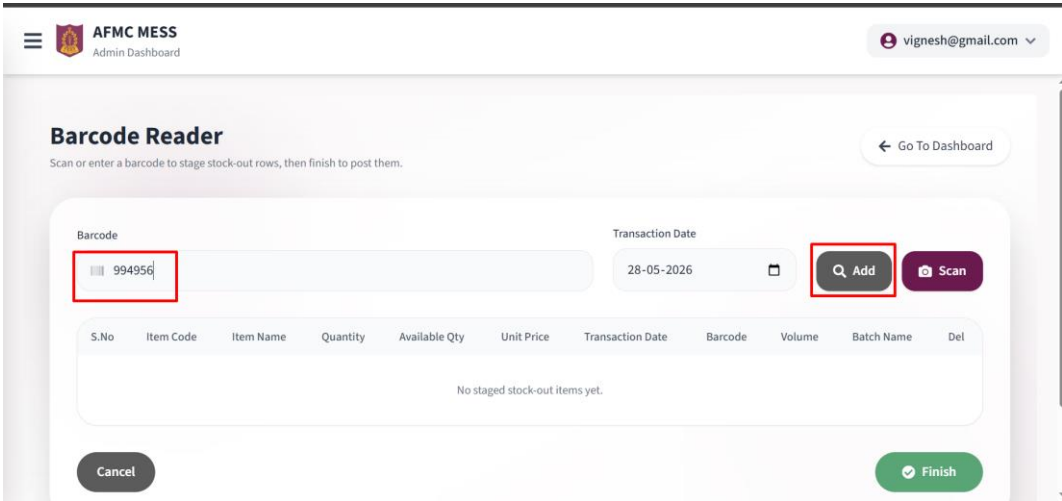

Figure 45: Stock Transfer Completed

5.11 User Management

The User Management module provides comprehensive tools for administering user accounts. Administrators can add users individually or in bulk, edit existing user information, deactivate accounts, and manage user roles.

5.11.1 Viewing Users

Click the User Management card from the dashboard to access the user listing screen. All registered users are displayed in a table showing their name, username, role, and status. Use the search functionality to find specific users by name or role.

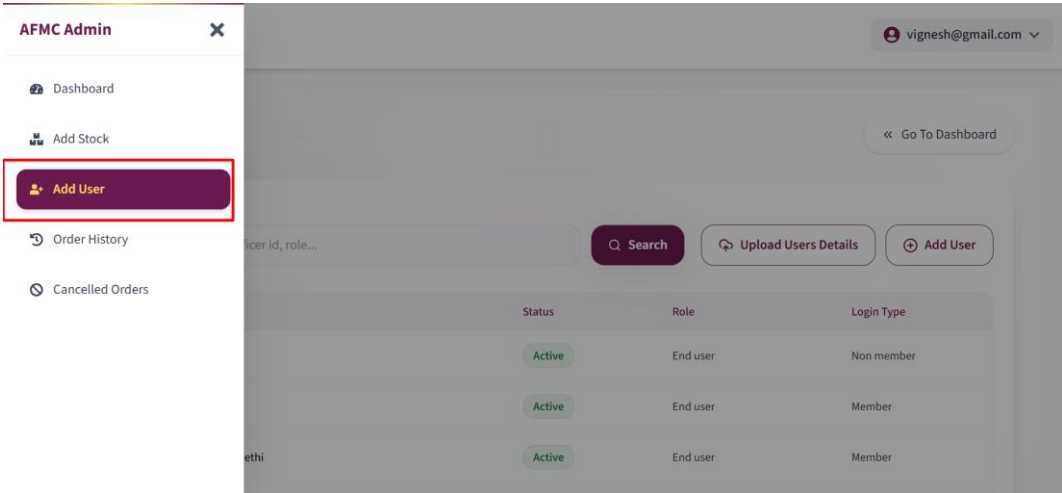

Figure 46: User Management Dashboard

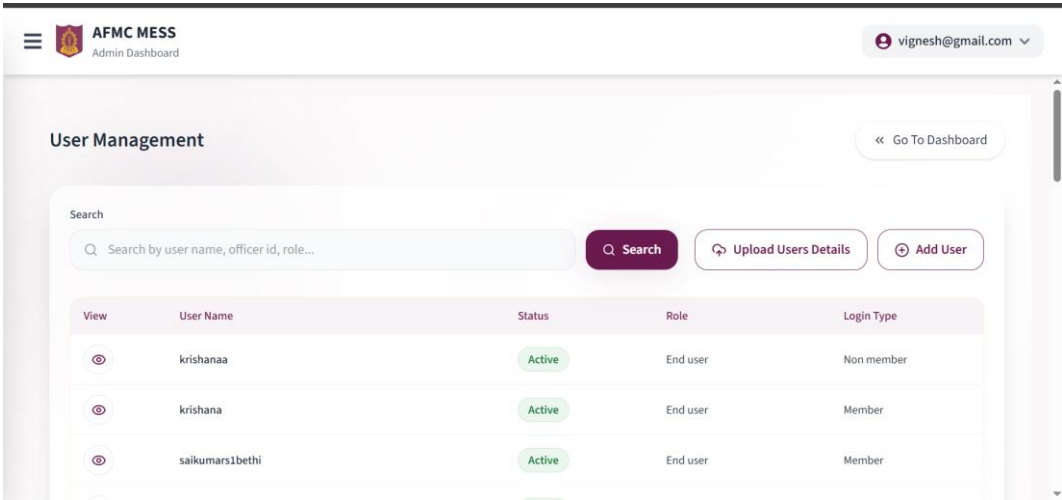

Figure 47: Registered Users List

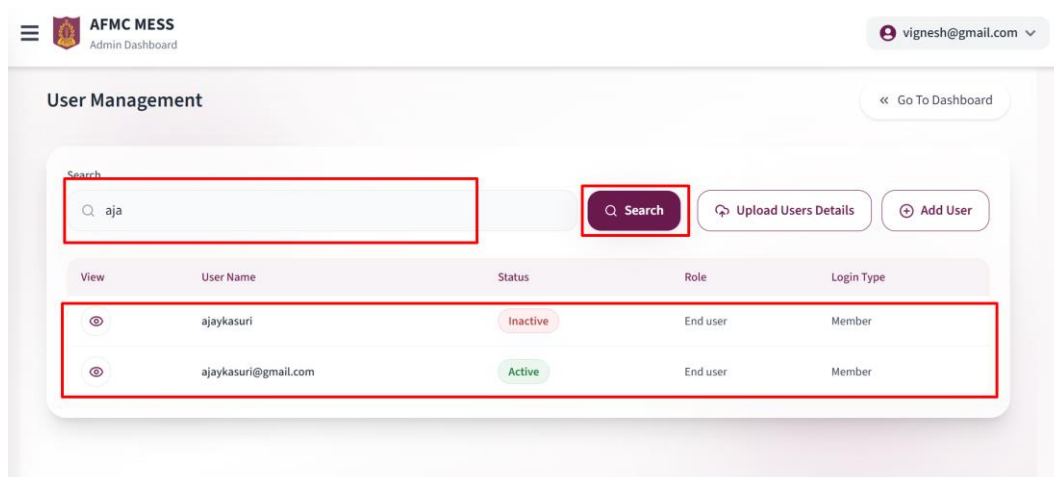

Figure 48: Searching Users by Name or Role

5.11.2 Bulk User Upload

For adding multiple users simultaneously, the bulk upload feature allows you to import user data from an Excel spreadsheet. Click the Upload User Details button to open the upload dialog.

Before uploading, download the sample template by clicking Sample Template. This Excel file contains the required data format with example entries. Prepare your user data following this exact format to ensure successful import.

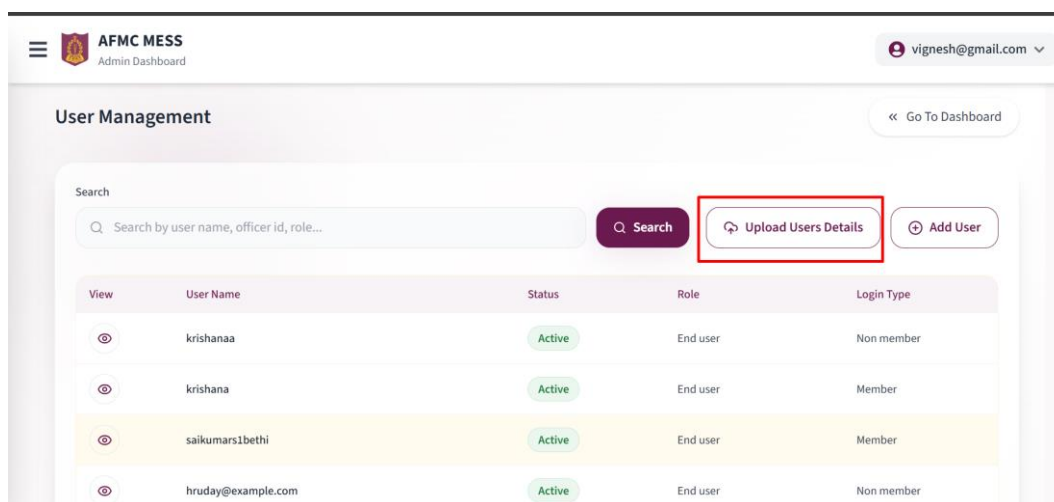

Figure 49: Bulk User Upload Dialog

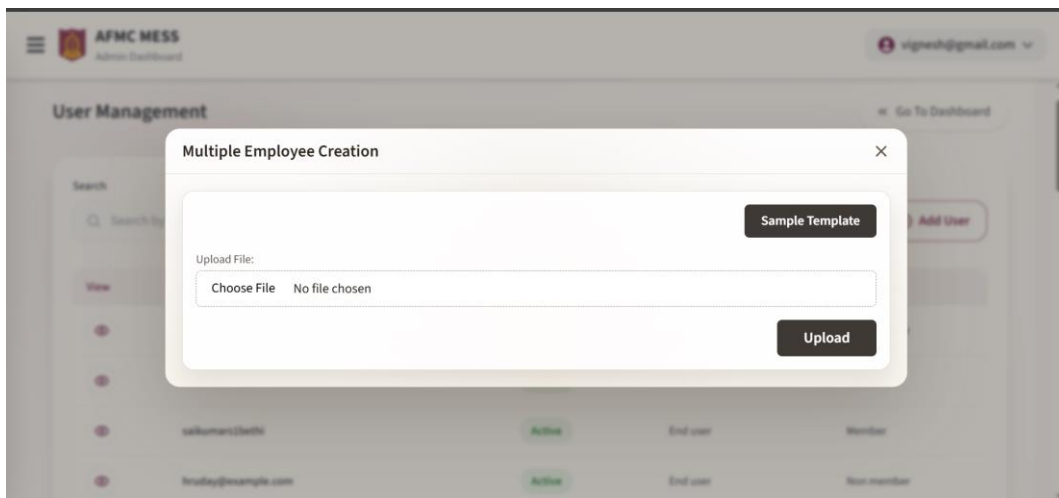

Figure 50: Sample Excel Template Format

After preparing the data file, click Choose File to select your Excel spreadsheet, then click Upload to import the user data. The system will process the file and add all valid users. Any errors during import will be reported for correction.

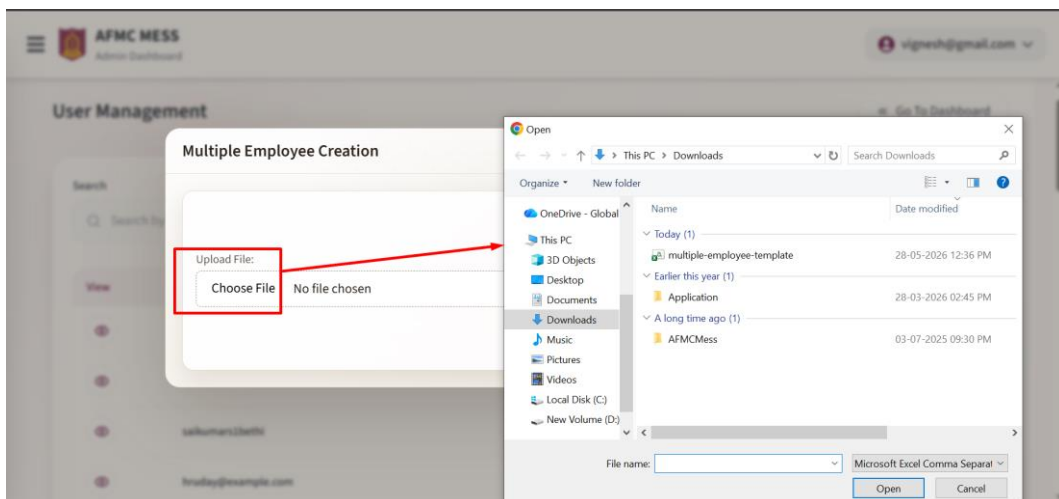

Figure 51: Selecting and Uploading User Data File

5.11.3 Manual User Creation

To create a single user account, click the Add User button. You will be navigated to the user creation form where the following information must be provided:

16. Login Type: Select Member or Non-Member
17. Full Name: Enter the user's complete name
18. Username: Create a unique username (must not already exist)
19. Password: Set an initial secure password
20. Contact Information: Phone number and email address

21. Role: Assign appropriate user role

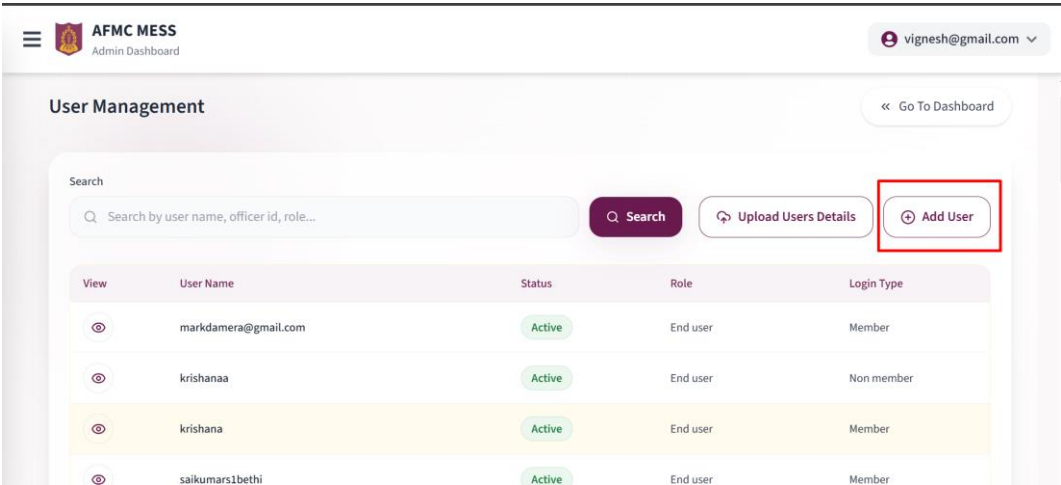

Figure 52: Manual User Creation Form

The username must be unique across the system. If you attempt to create a user with an existing username, a validation warning will be displayed and the account will not be created. After entering all required information, click the Create button. The new user will be added and will appear in the user listing.

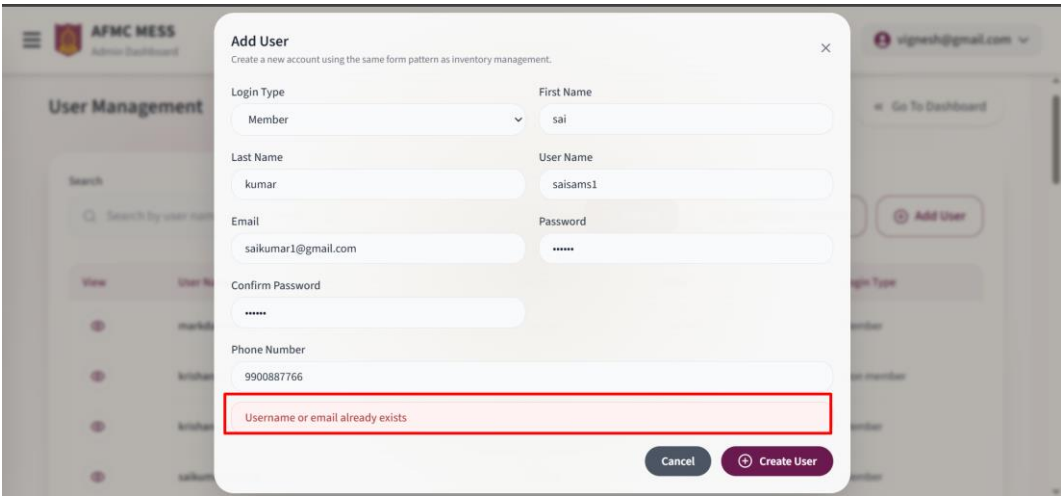

Figure 53: Username Uniqueness Validation

5.11.4 Editing Users

To modify an existing user's information, click the eye icon next to the user in the listing. This will open the user edit screen where you can update contact details, change roles, or modify other account information. Click Save Changes to apply updates.

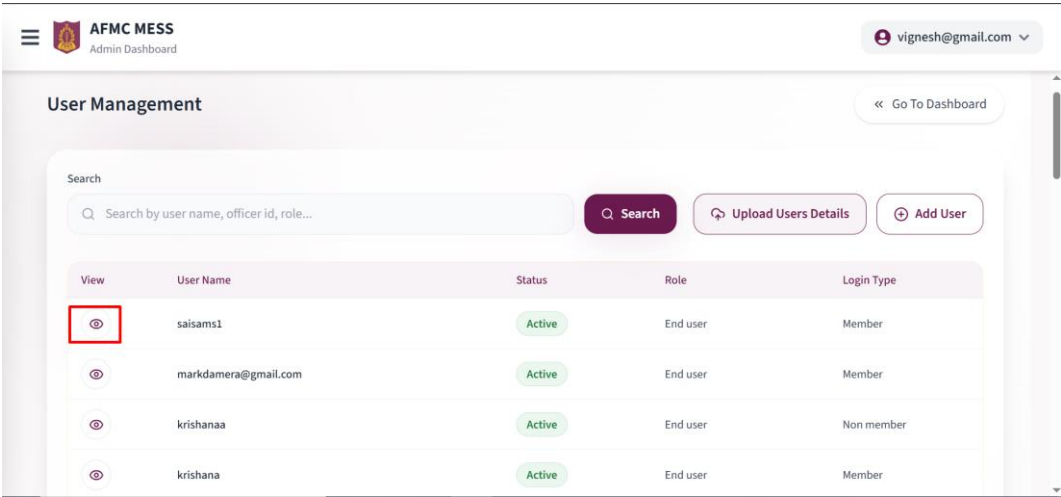

Figure 54: User Edit Screen

5.11.5 Deactivating Users

To deactivate a user account, open the user edit screen and change the Status field from Active to Inactive. Click Save Changes to apply. Once deactivated, the user will no longer be able to log in to the system. Deactivated accounts can be reactivated by changing the status back to Active.

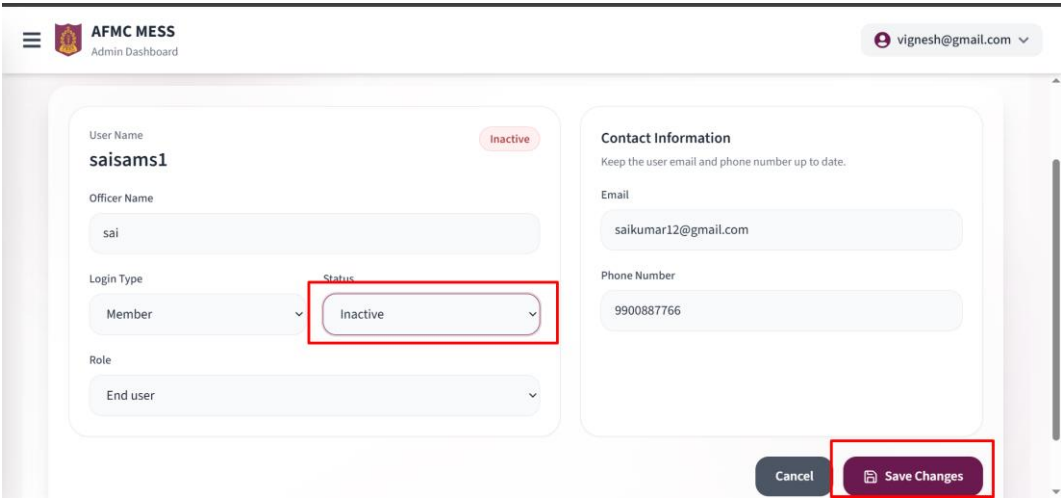

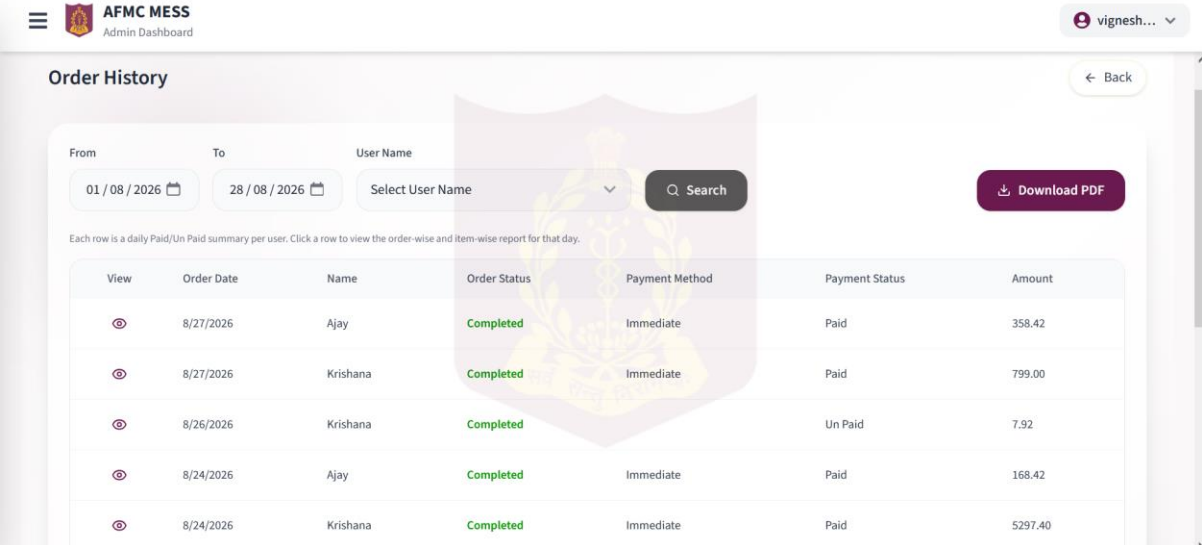

Figure 55: Deactivating a User Account

5.12 Order History

The Order History module provides a comprehensive view of all completed orders within the system. Navigate to Order History from the sidebar to access this functionality.

The order history listing displays all completed orders with details including order number, date, user name, items ordered, total amount, and status. Use the date filter to view orders within a specific date range, or search by username to find orders placed by specific individuals.

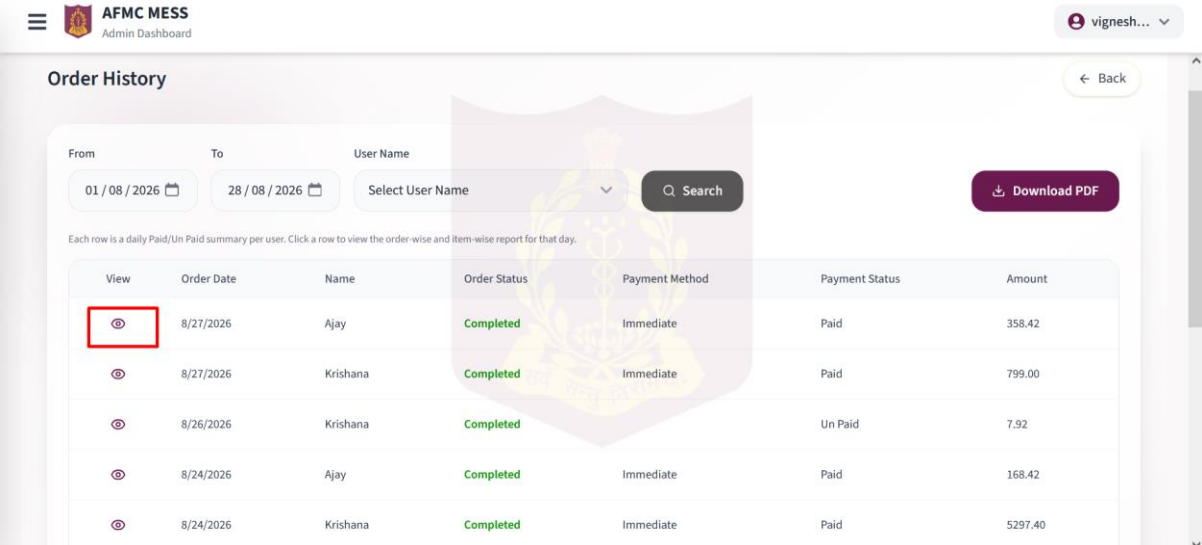

The screenshot shows the AFMC MESS Admin Dashboard. At the top, there is a header with the AFMC MESS logo and 'Admin Dashboard' text. On the right, a user profile 'vignesh...' is visible. The main section is titled 'Order History' and includes a 'Back' button. Below this, there are filters for 'From' (01/08/2026), 'To' (28/08/2026), and 'User Name' (Select User Name). A 'Search' button and a 'Download PDF' button are also present. A note states: 'Each row is a daily Paid/Un Paid summary per user. Click a row to view the order-wise and item-wise report for that day.' The table below lists orders with columns: View, Order Date, Name, Order Status, Payment Method, Payment Status, and Amount.

View	Order Date	Name	Order Status	Payment Method	Payment Status	Amount
	8/27/2026	Ajay	Completed	Immediate	Paid	358.42
	8/27/2026	Krishana	Completed	Immediate	Paid	799.00
	8/26/2026	Krishana	Completed		Un Paid	7.92
	8/24/2026	Ajay	Completed	Immediate	Paid	168.42
	8/24/2026	Krishana	Completed	Immediate	Paid	5297.40

Figure 56: Order History Listing

Click on any eye to view the detailed order information in item wise report and order wise report

This screenshot is identical to Figure 56, showing the 'Order History' table. In this version, the 'View' column for the first row (Ajay, 8/27/2026, Completed, Immediate, Paid, 358.42) is highlighted with a red box, indicating the action to click the eye icon to view details.

View	Order Date	Name	Order Status	Payment Method	Payment Status	Amount
	8/27/2026	Ajay	Completed	Immediate	Paid	358.42
	8/27/2026	Krishana	Completed	Immediate	Paid	799.00
	8/26/2026	Krishana	Completed		Un Paid	7.92
	8/24/2026	Ajay	Completed	Immediate	Paid	168.42
	8/24/2026	Krishana	Completed	Immediate	Paid	5297.40

Figure 57: Order Detail View

5.12.1 Order-Wise Report

The Order-Wise Report allows you to view the complete details of a specific order. By selecting or searching for an Order Number, you can view all the information related to that particular order, including the order details and associated items.

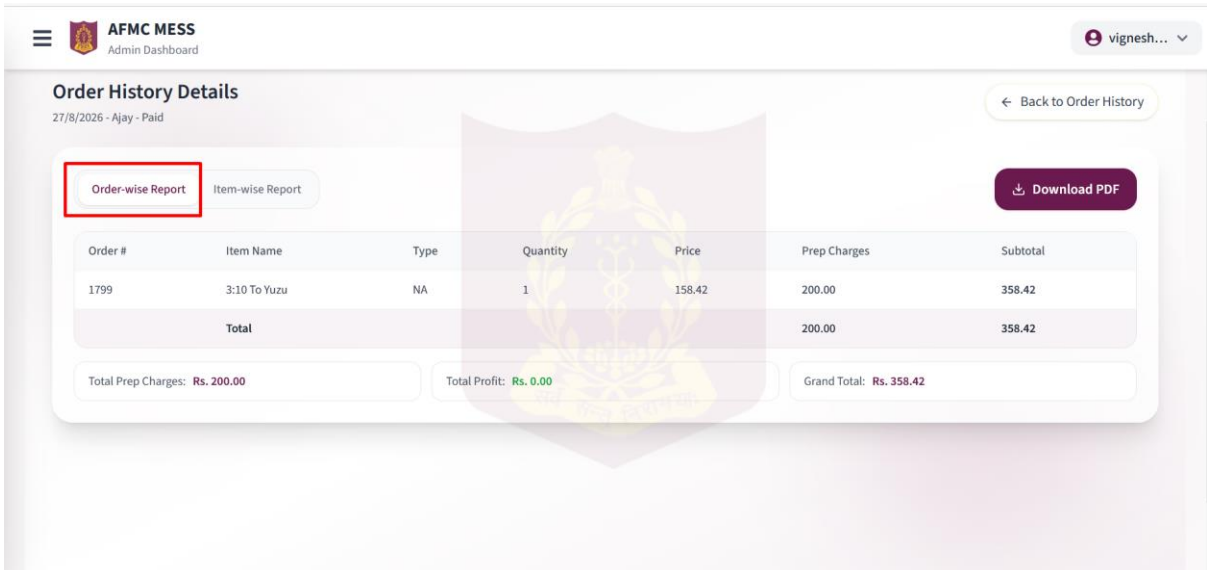

Figure 57.1: Order-wise Detail View

5.12.1 Order-Wise Report

The Item-Wise Report allows you to view item details grouped by item. It displays the items included in the orders along with their respective order details, making it easy to view and track the data for each item.

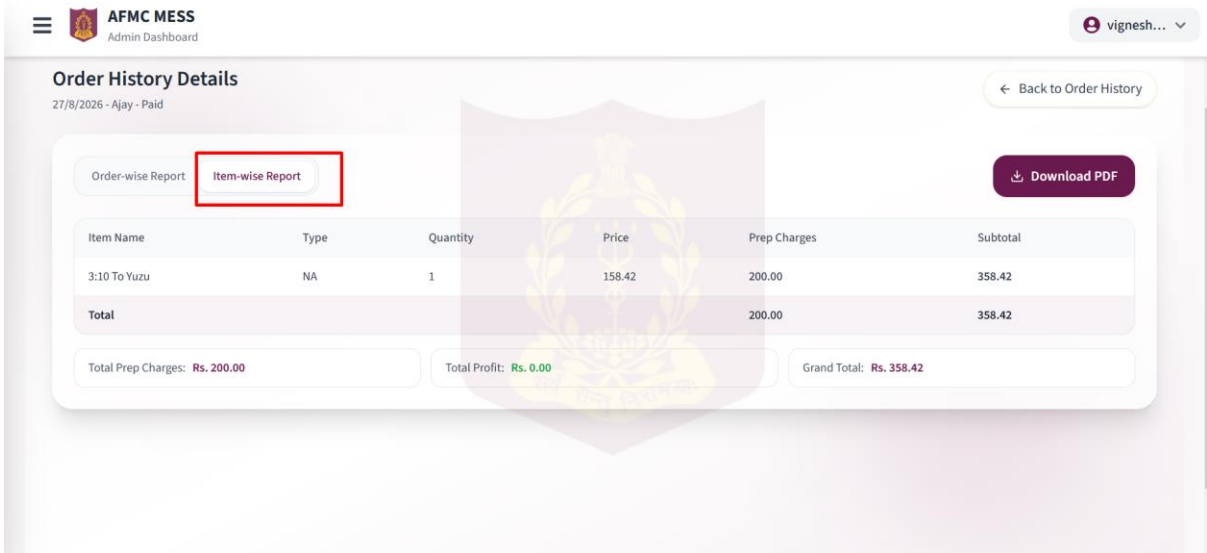

Figure 57.2: Item-wise Detail View

5.13 Cancel Orders

The Cancel Orders module displays all orders that have been cancelled either by users or by kitchen staff. This provides visibility into cancellation patterns and helps identify potential operational issues.

Navigate to Cancel Orders from the sidebar menu. The listing shows all cancelled orders with relevant details including order number, cancellation date, user information, and reason where available. Use the date range filter to view cancellations within specific periods.

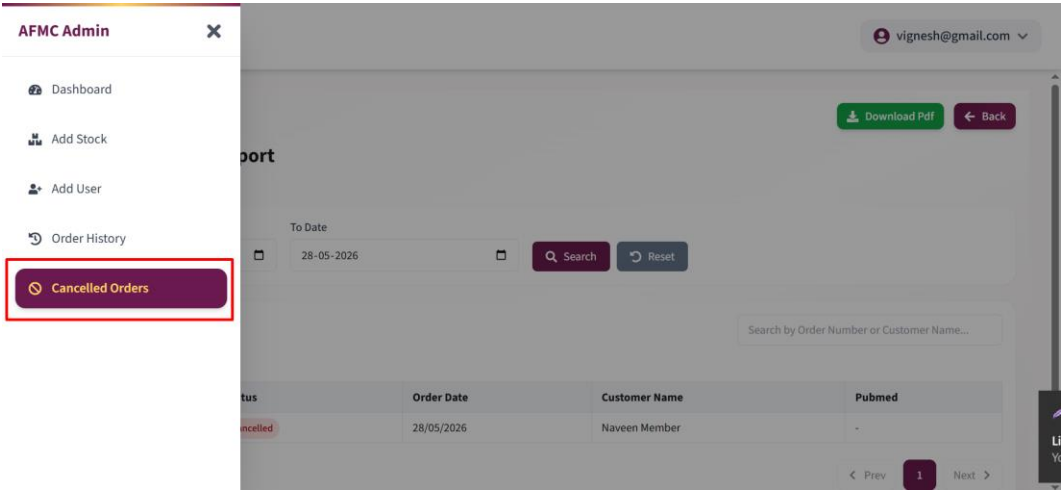

Figure 58: Cancelled Orders Listing

The cancelled orders report can be downloaded as a PDF for record-keeping and analysis purposes. Click the Download PDF button to export the currently displayed data.

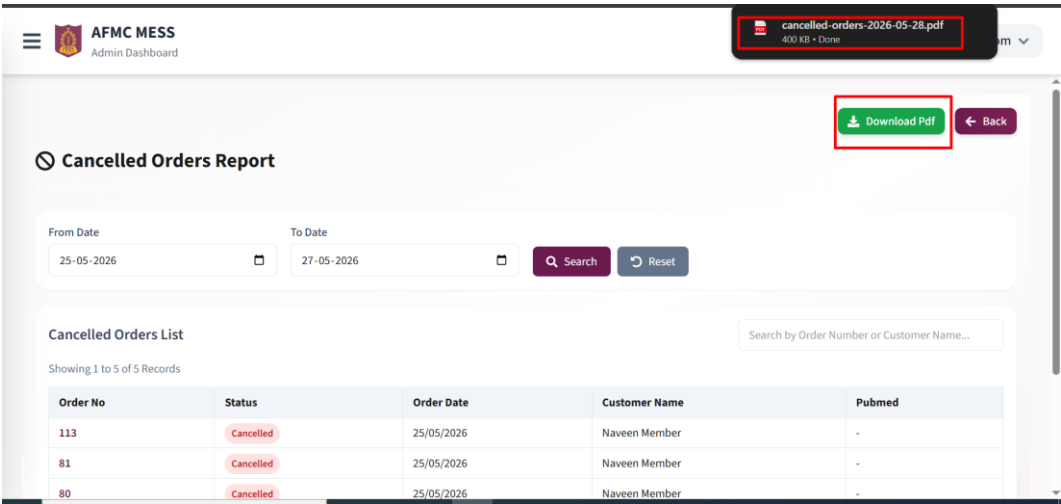

Figure 59: Downloading Cancelled Orders Report

5.14 Change Password

Administrators can change their account password through the Change Password functionality. Click on your username in the top navigation bar to open a dropdown menu, then select Change Password.

Enter your current password, followed by your new password and confirm password. The new password must meet the system's security requirements and cannot be the same as your current password. Additionally, the new password and confirm password fields must match exactly.

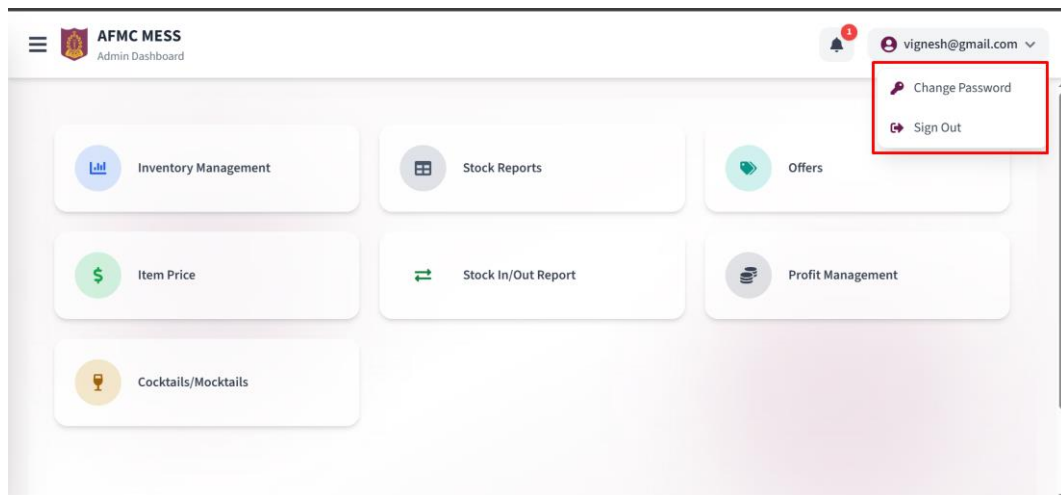

Figure 60: Accessing Change Password

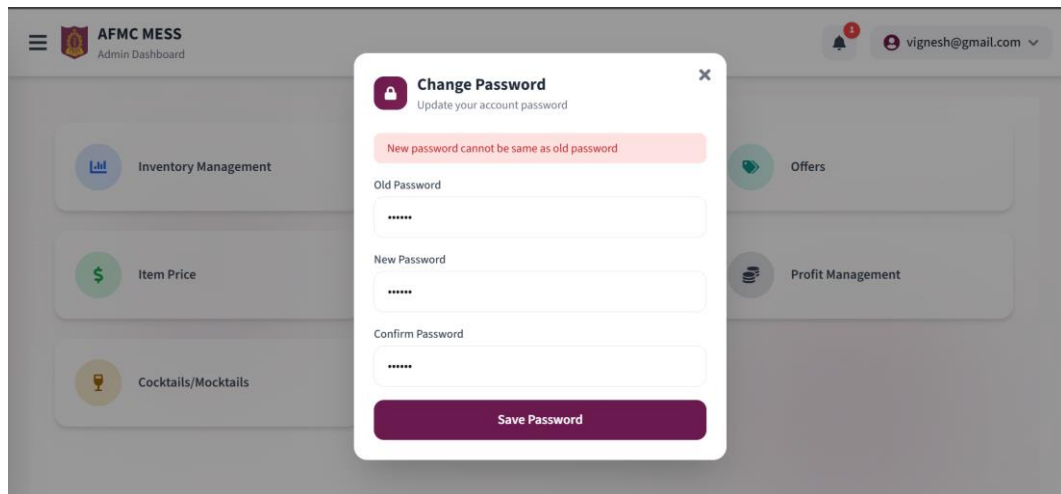

Figure 61: Change Password Form

If the old password and new password are identical, the system will display a validation error. Similarly, if the new password and confirm password do not match, an error message will be shown. Correct the input and try again.

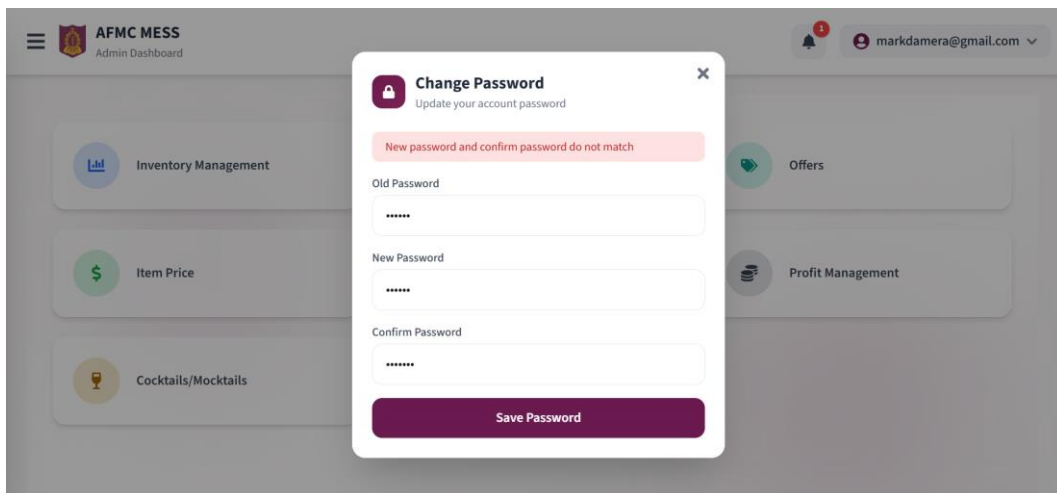

Figure 62: Password Validation Error

5.15 Sign Out

To securely exit the application, click on your username in the top navigation bar and select Sign Out from the dropdown menu. This will terminate your session and redirect you to the login page. For security purposes, always sign out when you have completed your tasks, especially when using a shared or public computer.

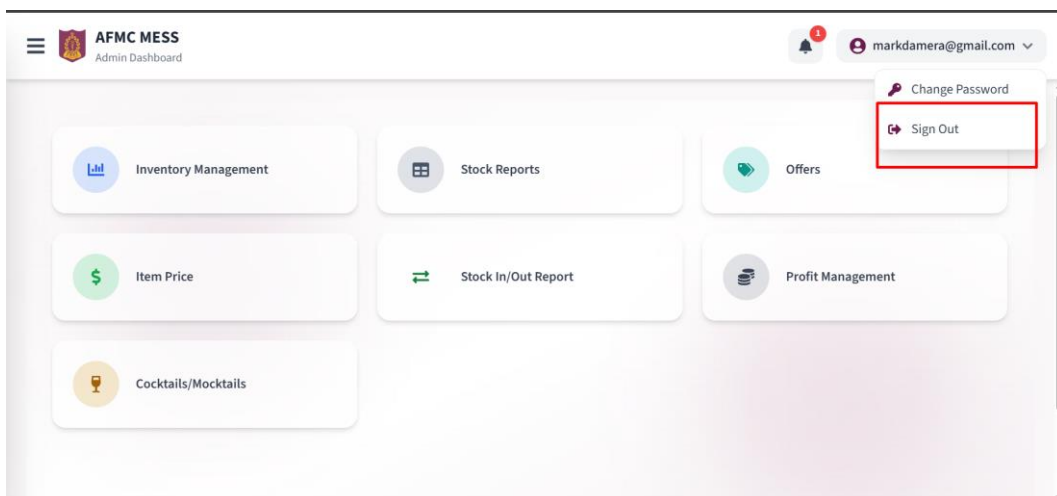

Figure 63: Sign Out Option

5.16 Weekly Mess Timings

The Weekly Mess Timings module allows the administrator to configure and manage the mess operating hours for each day of the week. The administrator can define the timings for Shift 1 and Shift 2, update the start and end times, and close the mess for the entire day when required.

The configured timings determine whether users can access the order screen. When the active mess timing expires, users are automatically redirected to the Time Out screen.

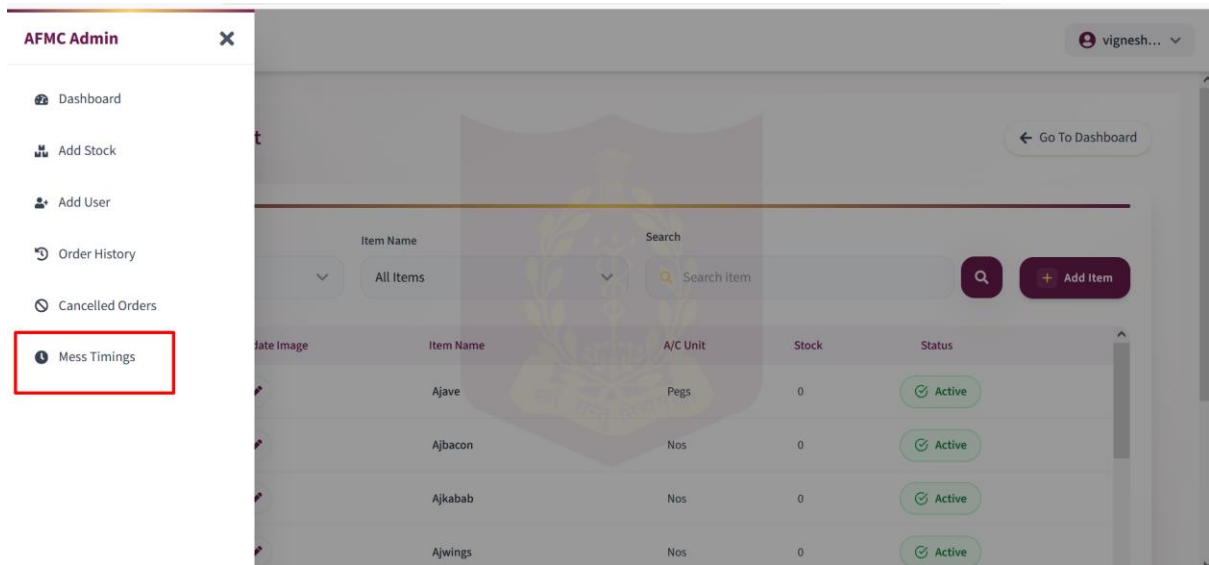

Figure 1: Navigation

5.16.1 Weekly Mess Timings Screen

The Weekly Mess Timings screen displays the configured mess timings for the week.

The administrator can:

- View the timings configured for each day.
- Configure Shift 1 timing.
- Configure Shift 2 timing.
- Modify the From and to times for a shift.
- Close the mess for the entire day.
- Save the updated timings.

The configured timings are used by the system to control user access to the shopping/order functionality.

Figure 2: Sign Mess Timings Screen

5.16.2 Updating Shift Timings

The administrator can update the operating time for **Shift 1** and **Shift 2**.

For each shift, the administrator can specify:

- **From** – Start time of the shift.
- **To** – End time of the shift.

Steps to Update Shift Timing

1. Open **Weekly Mess Timings**.
2. Select the required day.
3. Select the shift that needs to be updated.
4. Enter or modify the **from** time.
5. Enter or modify the **to** time.
6. Save the changes.
7. The updated timing is applied to the selected day.

The system uses the updated timing to determine whether the mess is currently active or closed.

Figure 3: Time screen

5.16.3 Active Mess Timing

The system continuously checks the configured mess timing.

While the current time falls within an active shift, the user can continue using the shopping/order screen.

For example, if a shift is configured from **14:00 to 14:15**, the system displays the currently active timing to the user.

When the configured end time is reached, the active timing expires and the mess is considered closed for that shift.

AFMC MESS

Figure 4: Updating the time

5.16.4 Automatic Navigation When Timing Expires

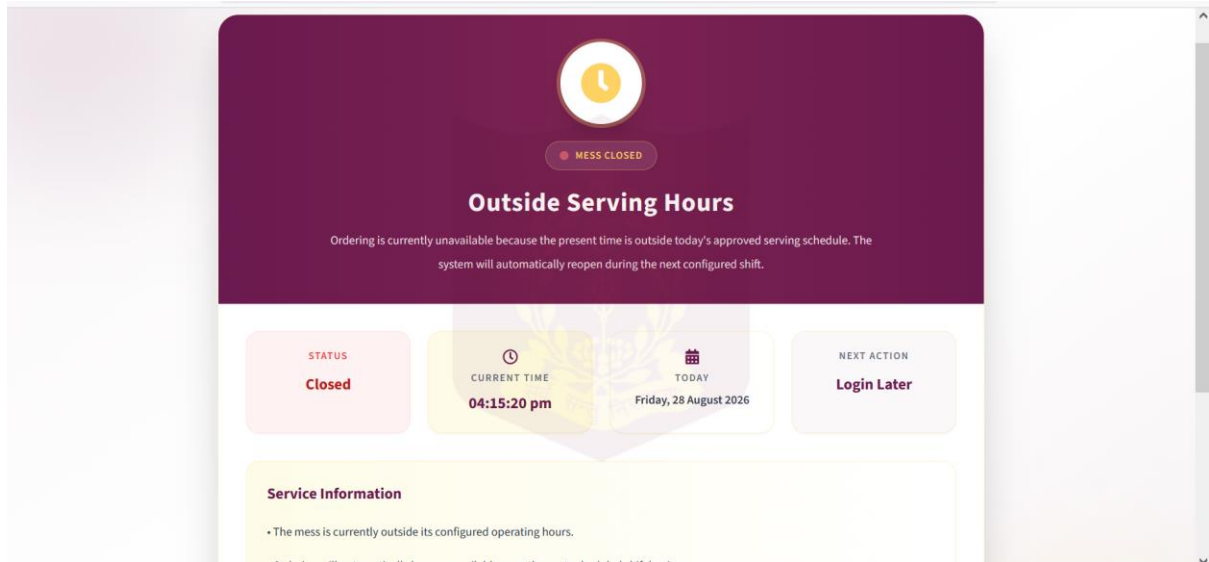

Figure 5: Time Out Screen

When the current time reaches the configured **To** time, the system automatically restricts the user's access to the shopping screen.

For example:

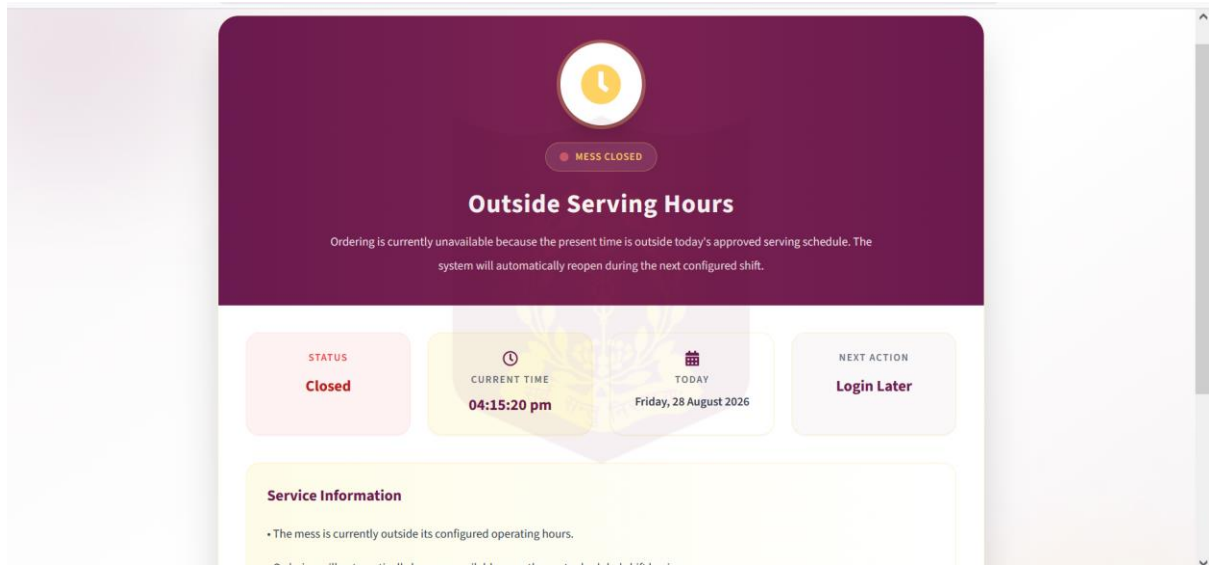

Configured Shift Timing: 14:00 – 14:15

At **14:14**, the shift is still active.

At **14:15**, the shift ends and the user is automatically redirected from the shopping screen to the **Time Out** screen.

This prevents users from continuing to place orders after the configured mess timing has ended.

5.16.5 Time Out Screen

The **Time Out** screen is displayed when the user's current session falls outside the configured mess operating time.

The screen informs the user that the current mess timing has ended.

From the **Time Out** screen, the user can log out of the application.

After logging out, the user must log in again when access to the mess becomes available during the next active timing.

5.16.6 Closing the Mess for the Entire Day

The administrator can also close the mess for the **entire day**, irrespective of the configured Shift 1 and Shift 2 timings.

When the mess is marked as closed for the day:

- The mess remains unavailable for the entire day.
- Users cannot access the shopping/order functionality.
- Users are redirected to the appropriate closed/time-out screen.
- The configured shifts do not make the mess available again for that day.

This option can be used when mess services are unavailable for the entire day.

Day	Shift 1 From	Shift 1 To	Shift 2 From	Shift 2 To	Active
MONDAY	08:31 AM	01:00 PM	01:00 PM	10:00 PM	☒
TUESDAY	09:00 AM	01:00 PM	04:20 PM	10:00 PM	☒

FRIDAY	12:00 AM	12:00 PM	01:03 PM	04:14 PM	☐
SATURDAY	07:45 AM	01:45 PM	03:45 PM	10:45 PM	☒

Figure 6: Making an entire day off

5.16.7 Login and Time-Out Navigation

The system also validates the mess timing when a user attempts to log in.

The navigation flow works as follows:

Login → Timing Validation → Shopping Screen / Time Out Screen

When the Mess is Active

If the current time falls within an active mess timing:

Day	Shift 1 From	Shift 1 To	Shift 2 From	Shift 2 To	Active
MONDAY	08:31 AM	01:00 PM	01:00 PM	10:00 PM	☒
TUESDAY	09:00 AM	01:00 PM	04:20 PM	10:00 PM	☒
WEDNESDAY	08:00 AM	01:00 PM	01:00 PM	09:00 PM	☒
THURSDAY	10:42 AM	01:00 PM	05:00 PM	09:00 PM	☒
FRIDAY	12:00 AM	12:00 PM	01:03 PM	10:34 PM	☒
SATURDAY	07:45 AM	01:45 PM	03:45 PM	10:45 PM	☒

Figure 6: Activating the entire day

Login → Shopping Screen

The user can proceed with the shopping/order process.

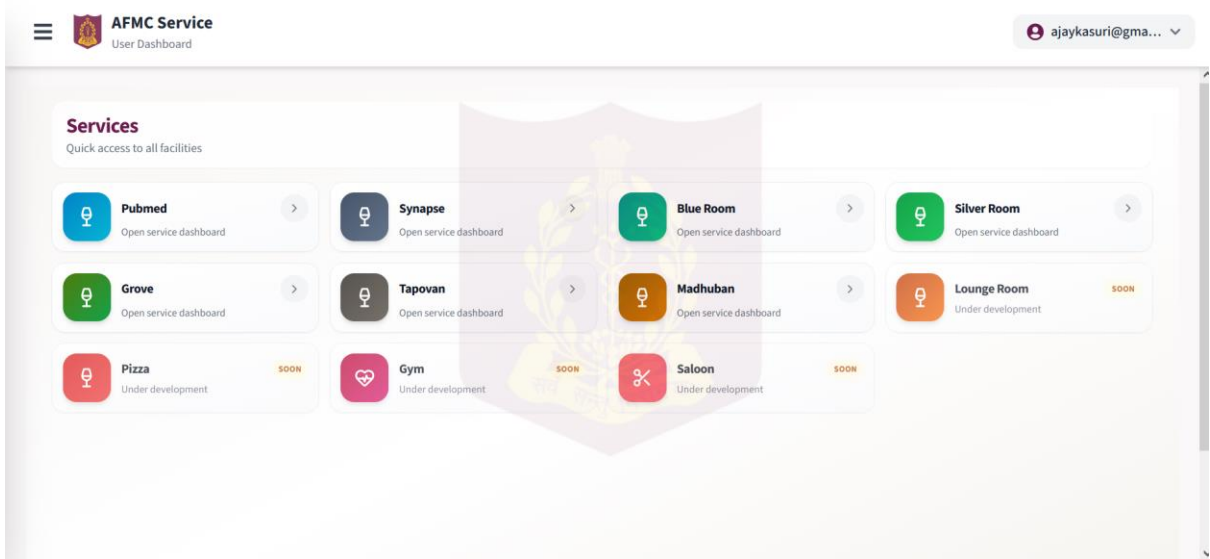

Figure 7: Users Dashboard Screen

When the Mess is Closed

If the current time is outside the configured mess timing:

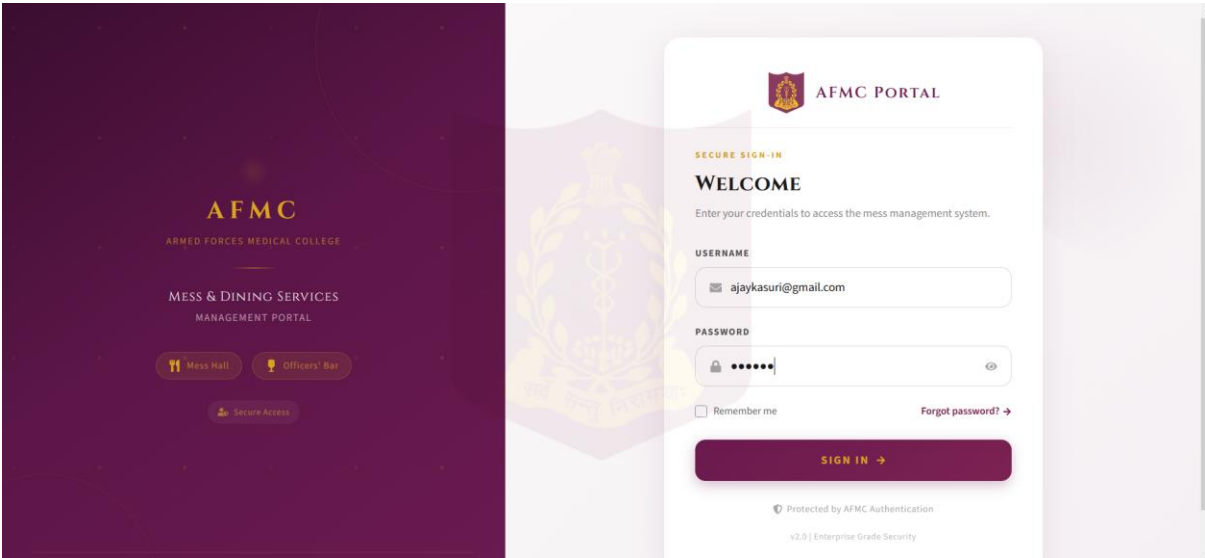

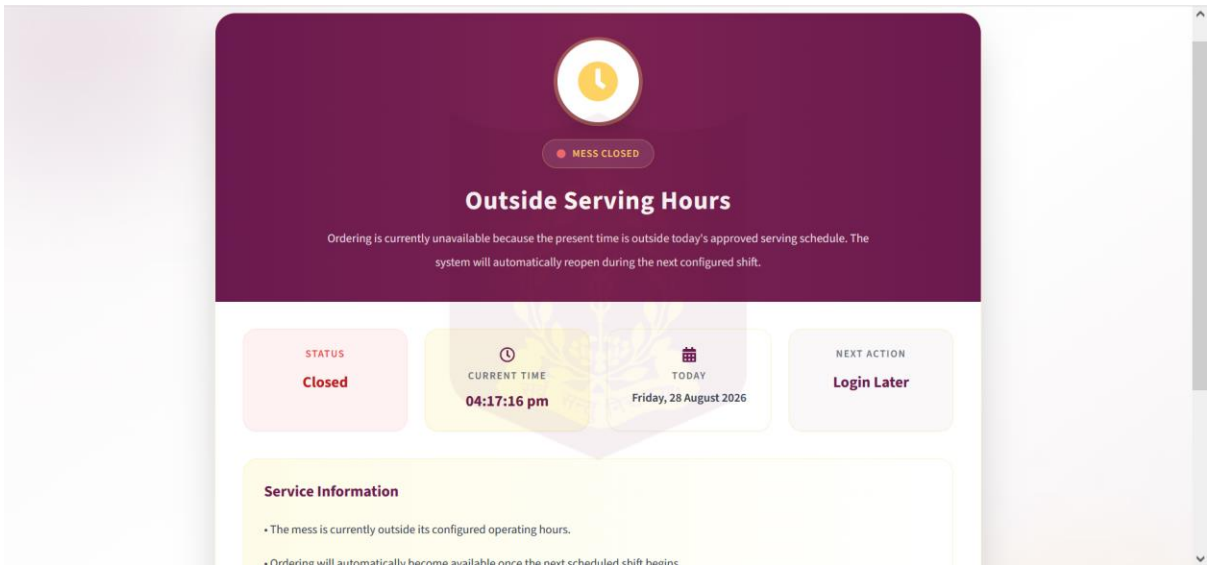

Figure 8: Sign In Screen

Login → Time Out Screen

The user cannot proceed to the shopping screen until the mess becomes active again.

6. End User Flow

The End User Flow guides employees through the process of browsing the menu, placing orders, making payments, and tracking order status. This section covers the complete user journey from login through order completion.

6.1 Login & Dashboard

End users access the AFMC Mess Application using the same login URL as administrators. Enter your username and password on the login screen and click Sign In. Upon successful authentication, you will be redirected to your personal dashboard.

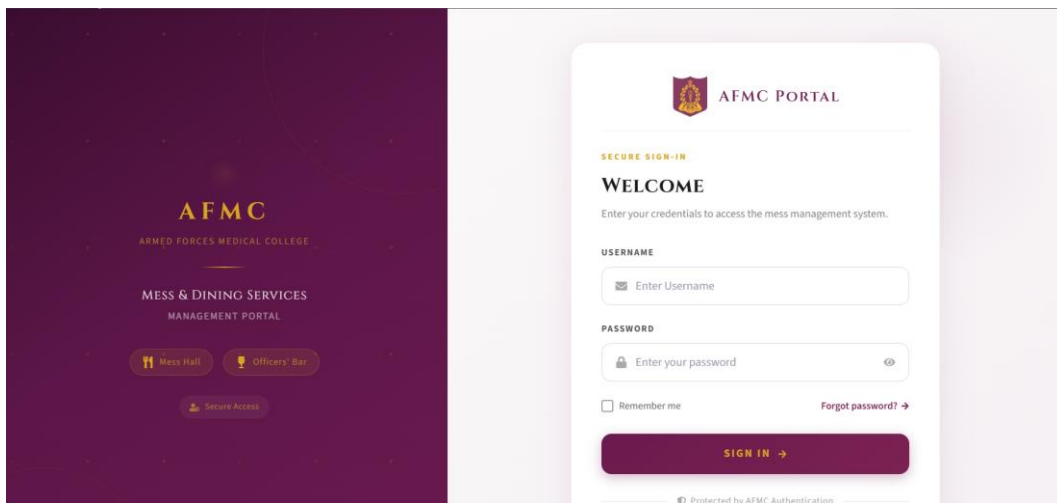

Figure 64: End User Login Screen

The user dashboard presents available service categories and provides access to all ordering functions. The interface is designed for intuitive navigation with clear visual indicators for menu categories, active offers, and cart status. Select the service you wish to use to proceed to the menu dashboard.

Figure 65: End User Dashboard

6.2 Menu Browsing

The menu dashboard displays all available food and beverage items organized by category. At the top of the screen, scrolling banners showcase current promotional offers. The main menu area is divided into two primary categories:

22. Drinks: Including soft drinks and hard drinks (beer, brandy, whisky, rum, cocktails, mocktails)
23. Snacks: Including vegetarian and non-vegetarian food items

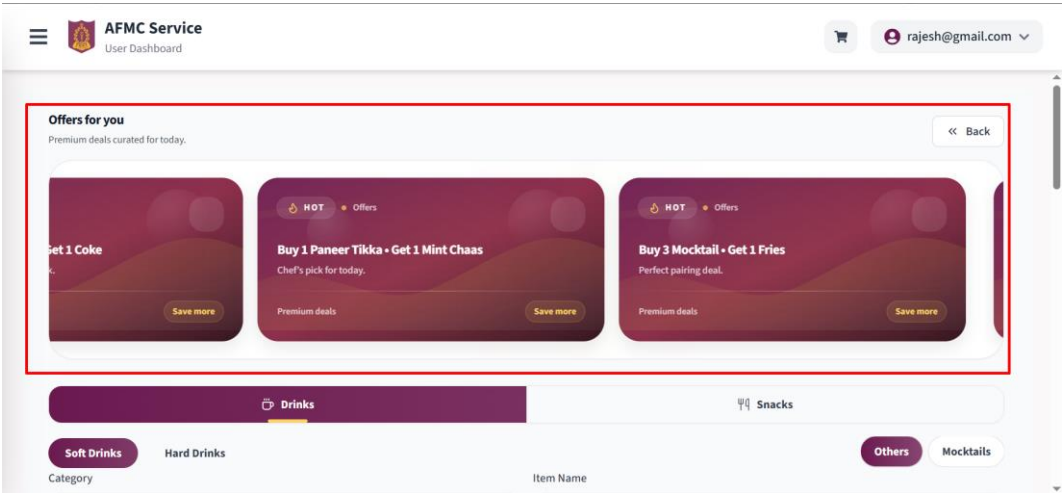

Figure 66: Menu Dashboard with Offers and Categories

Each main category contains sub-categories for refined browsing. Use the sub-category dropdown filters to narrow down the displayed items. For drinks, filter by soft drinks, hard drinks, or specific beverage types. For snacks, filter by vegetarian or non-vegetarian options.

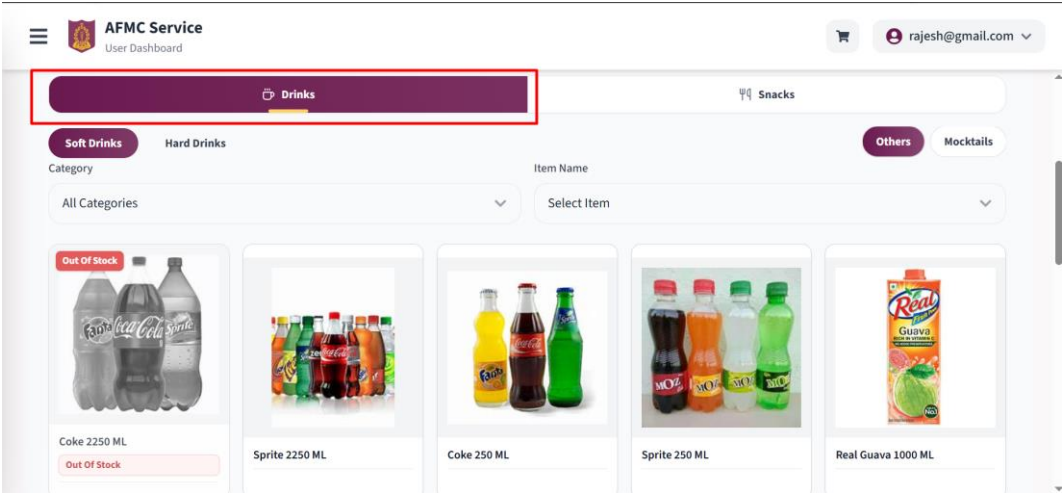

Figure 67: Category and Sub-category Filters

Items that are out of stock will display a faded appearance with an 'Out of Stock' overlay, and cannot be selected for ordering. This visual indicator helps users quickly identify available items.

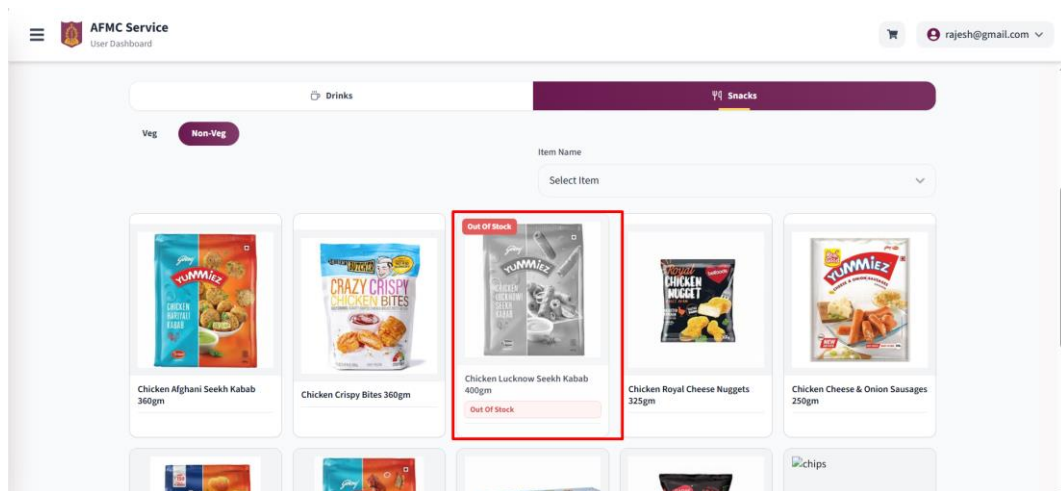

Figure 68: Out of Stock Item Indicator

6.3 Drinks Ordering Flow

The drinks ordering flow allows users to browse beverage categories, select items, and add them to the cart. This section covers the standard ordering process for all drink items except cocktails and mocktails (which are covered separately).

6.3.1 Selecting a Category

From the menu dashboard, navigate to the Drinks section. Select the desired sub-category (e.g., Hard Drinks) from the dropdown filter. The menu will refresh to display only items matching the selected sub-category.

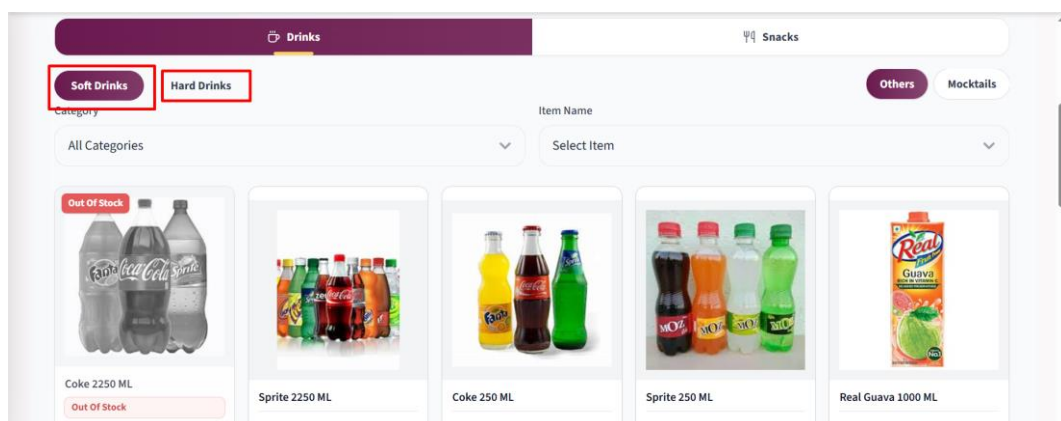

Figure 69: Drinks Category Selection

6.3.2 Filtering by Item Name

Use the Item Name dropdown to further filter the menu. Click the dropdown to view all available items in the selected sub-category, or type to search for a specific item. Select an item to filter the display to that specific product.

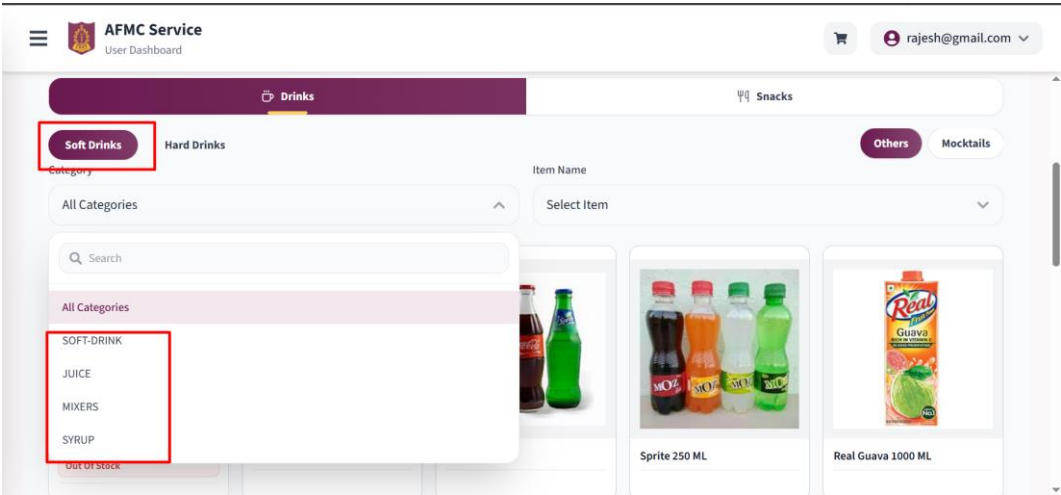

Figure 70: Filtering Items by Name

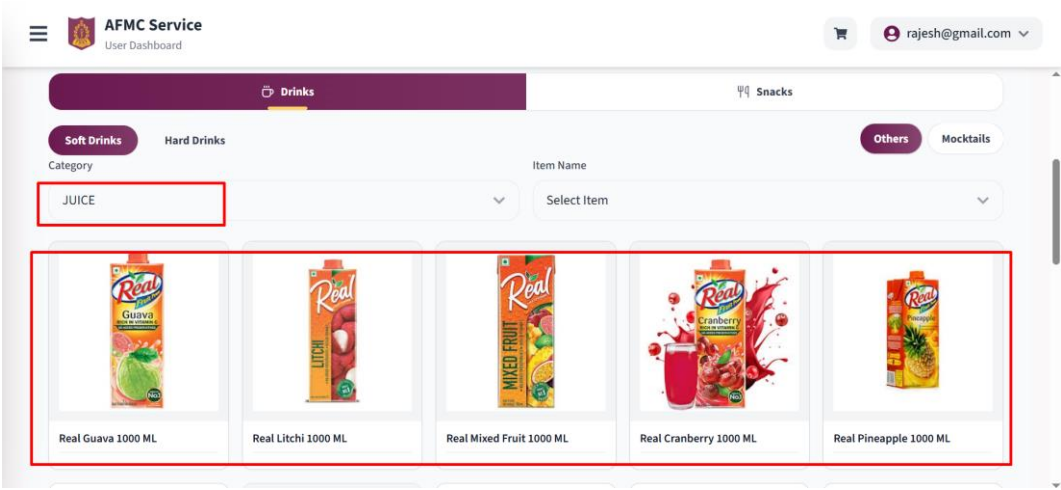

Figure 71: Filtered Menu Display

6.3.3 Adding to Cart

Click on any menu item to open the order dialog. Select the service type (Dine-In or Takeaway) from the Remarks dropdown. Enter the desired quantity and click Add to Cart. If the item has sufficient stock, a confirmation message will appear and the item will be added to your cart.

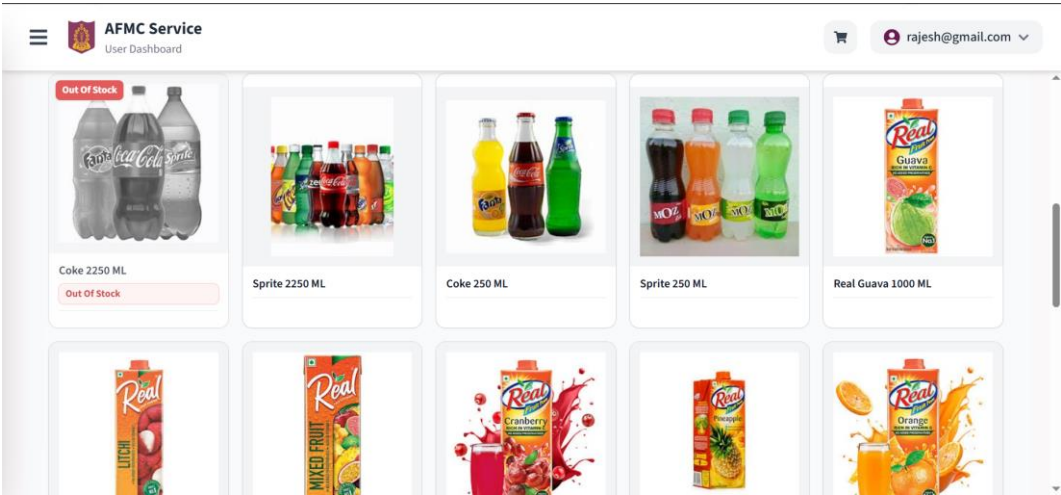

Figure 72: Item Order Dialog

If the requested quantity exceeds available stock, an 'Out of Stock' alert will be displayed. In this case, reduce the quantity or select a different item.

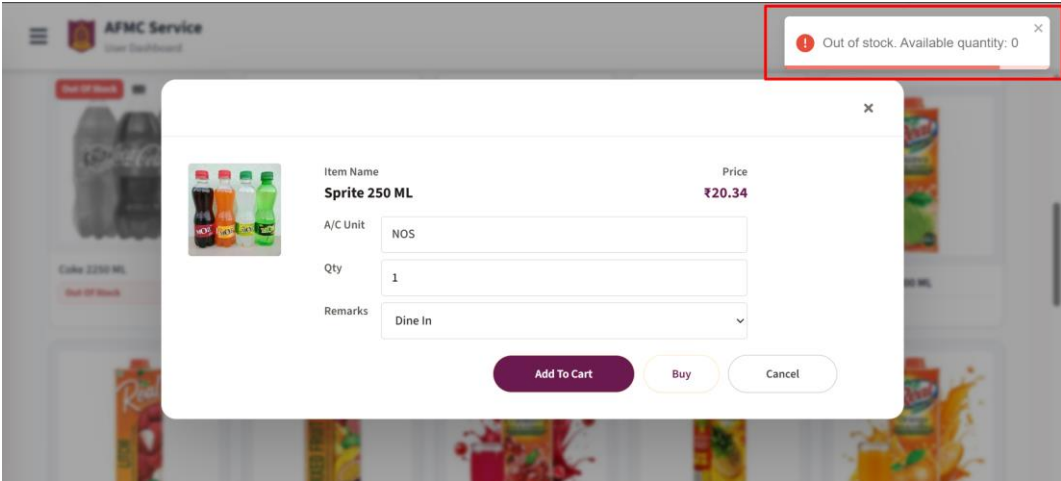

Figure 73: Out of Stock Alert

Upon successful addition, a toast notification will confirm the item has been added to the cart. The cart icon in the top navigation bar will update to show the current item count.

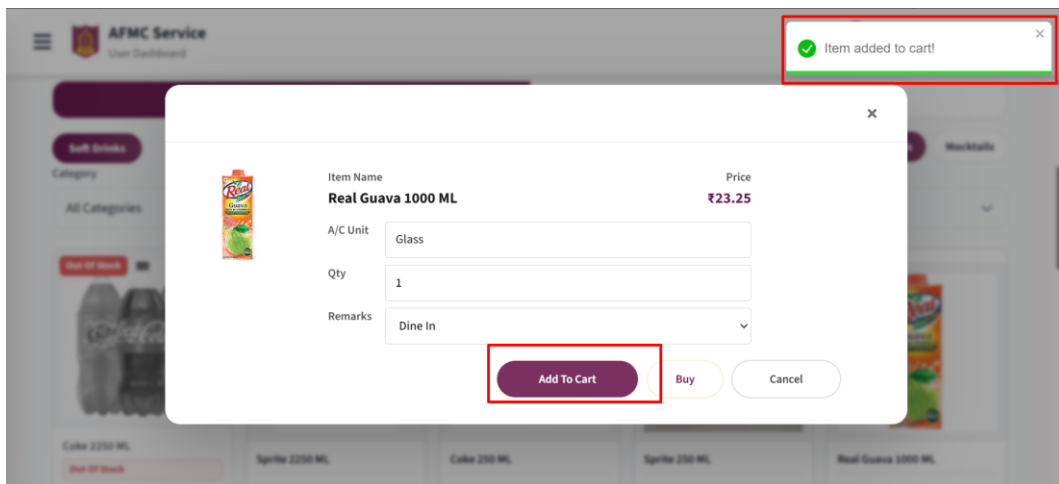

Figure 74: Cart Item Count Update

6.4 Snacks Ordering Flow

The snacks ordering flow follows the same pattern as drinks. Navigate to the Snacks section of the menu dashboard. The two sub-categories are Vegetarian (Veg) and Non-Vegetarian (Non-Veg).

Select the desired sub-category, then use the item name filter to locate specific items. Click on an item to open the order dialog, select the service type and quantity, then click Add to Cart.

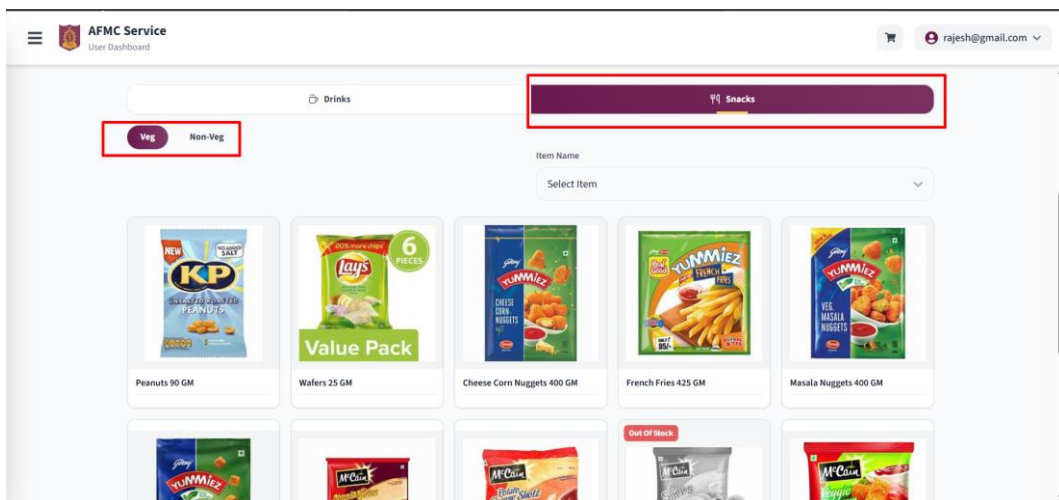

Figure 75: Snacks Menu with Sub-categories

The cart flow for snacks is identical to the drinks cart flow described in the following section. All cart operations including quantity adjustment, item deletion, and checkout apply uniformly across both categories.

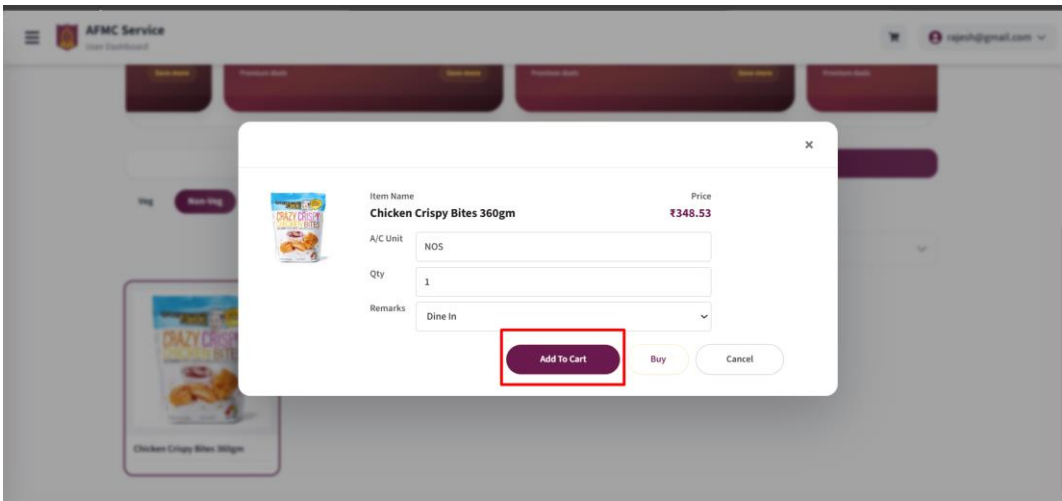

Figure 76: Snack Item Order Dialog

6.5 Cart Management

The cart management interface provides tools for reviewing and modifying your order before checkout. Click the cart icon in the top navigation bar to access the cart page.

6.5.1 Viewing Cart Contents

The cart page displays all items you have added, showing the item name, unit price, quantity, and subtotal for each entry. Review your selections carefully before proceeding to checkout.

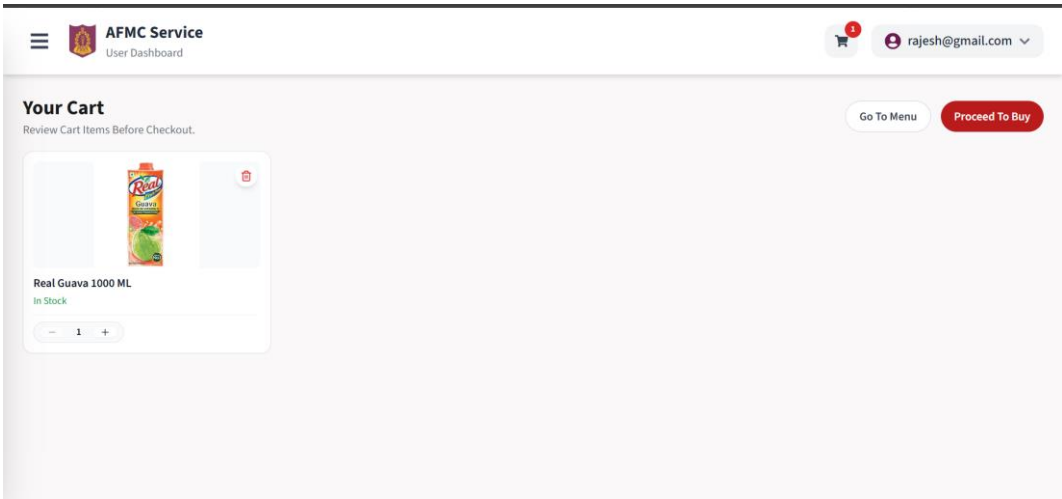

Figure 77: Cart Management Page

6.5.2 Adjusting Quantities

To change the quantity of an item, use the plus (+) and minus (-) buttons next to each cart entry. The subtotal will automatically recalculate, and a confirmation message will display when the quantity is updated.

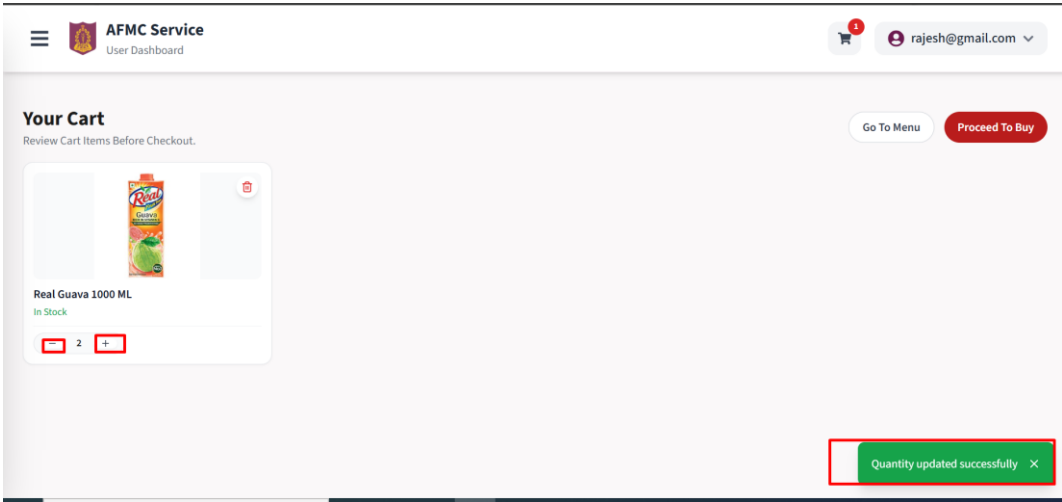

Figure 78: Adjusting Item Quantities in Cart

6.5.3 Deleting Cart Items

To remove an item from your cart, click the delete (trash) icon next to the item. The item will be immediately removed, and the cart total will be recalculated. If all items are removed, the cart will display an empty state message.

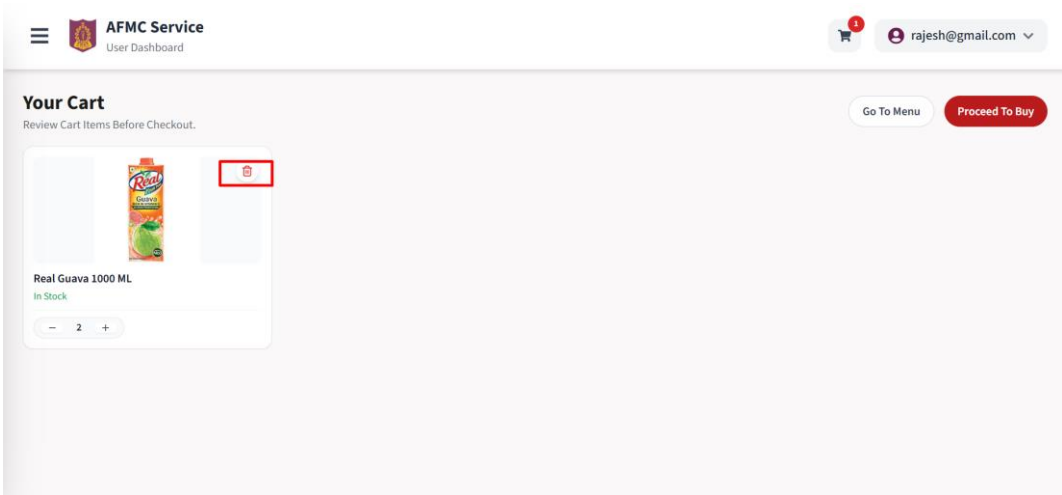

Figure 79: Deleting an Item from Cart

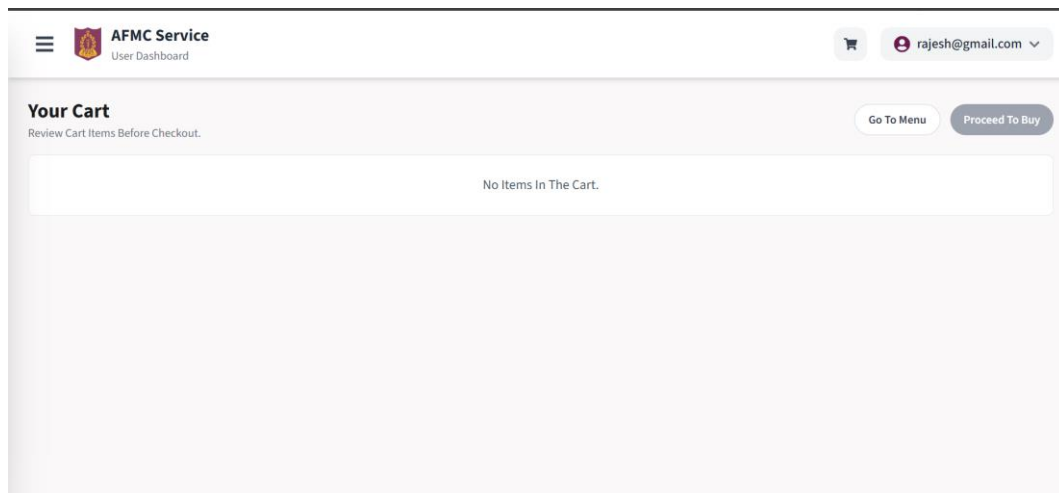

Figure 80: Empty Cart State

6.5.4 Proceeding to Checkout

When you are satisfied with your cart contents, click the Proceed to Buy button. A confirmation dialog will appear asking if you are sure you want to continue with the order. Click Yes to proceed to the order confirmation screen, or Cancel to return to the cart.

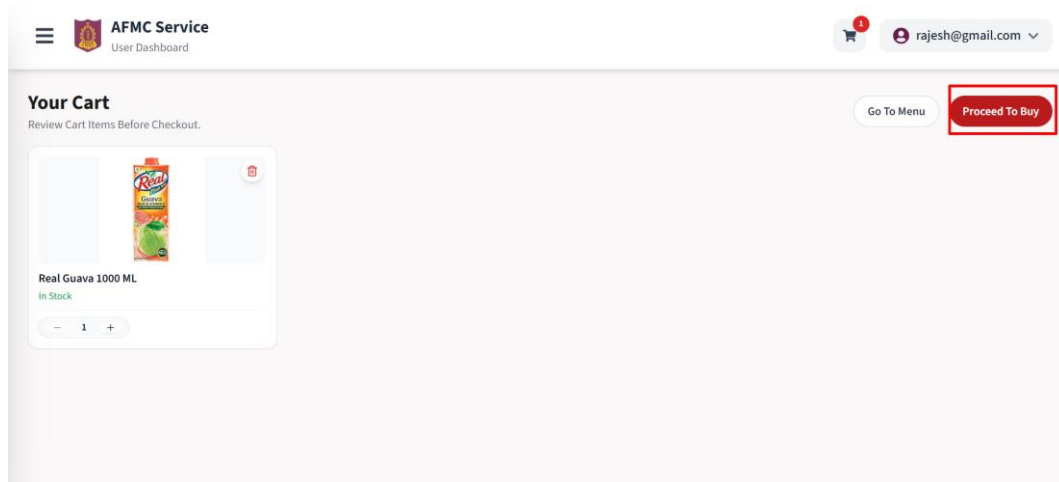

Figure 81: Proceed to Buy Confirmation

6.6 Cocktail / Mocktail Ordering

Ordering cocktails and mocktails follows a similar process to standard drinks but includes an additional ingredient customization step. This allows users to personalize their mixed drinks by adding or modifying ingredients.

6.6.1 Selecting a Cocktail/Mocktail

Navigate to the Drinks section and select the Hard Drinks sub-category. From the item type filter, select Cocktails to display available cocktail and mocktail items. Use the item name filter to locate a specific drink.

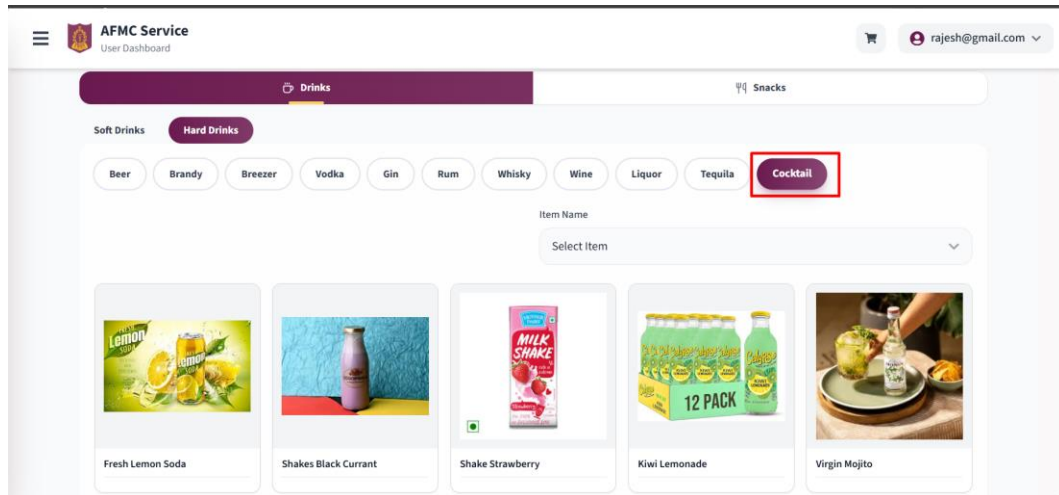

Figure 82: Selecting Cocktail Category

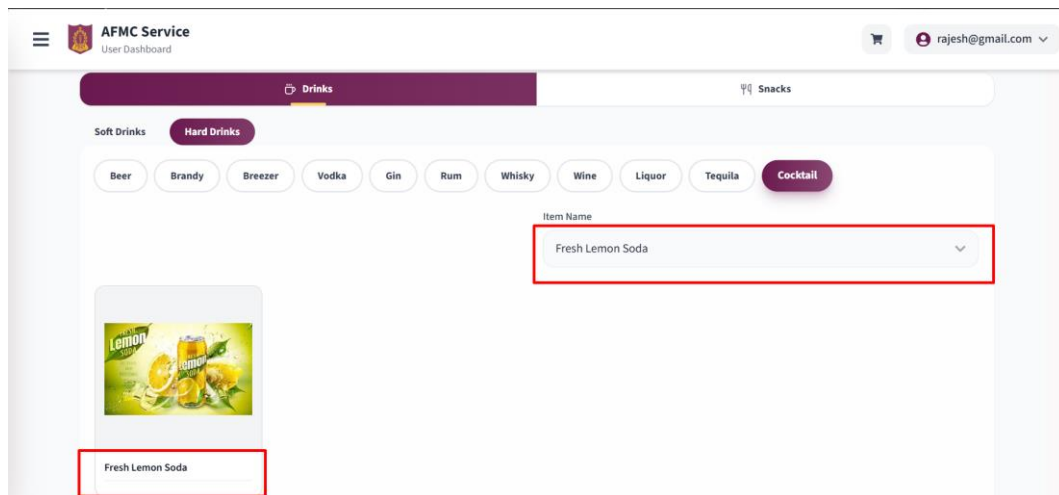

Figure 83: Cocktail/Mocktail Menu Display

6.6.2 Adding to Cart with Customization

Click on a cocktail item to open the order dialog. Select the service type and quantity, then click Add to Cart. After adding the item, navigate to the cart page.

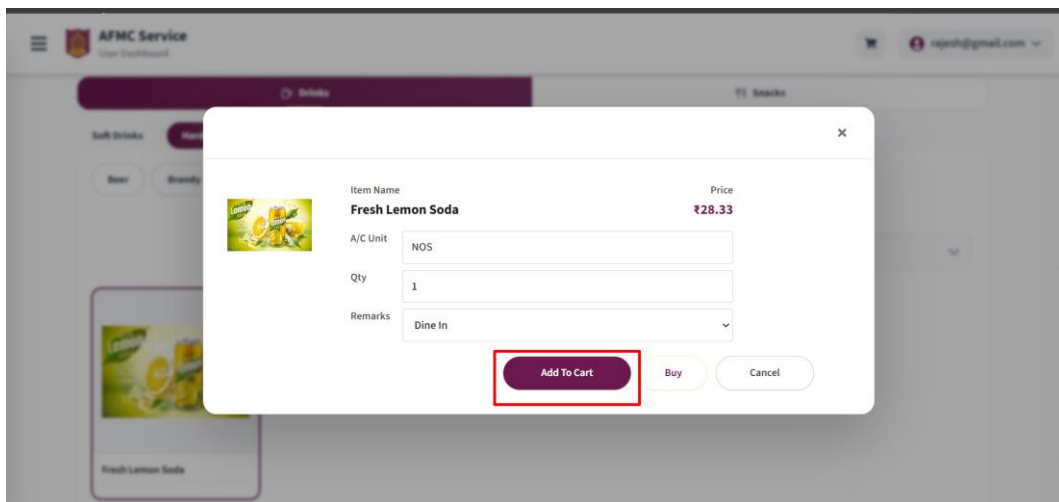

Figure 84: Cocktail Order Dialog

In the cart, cocktail and mocktail items display an edit (pencil) icon that allows ingredient customization. Click this icon to open the ingredient management interface.

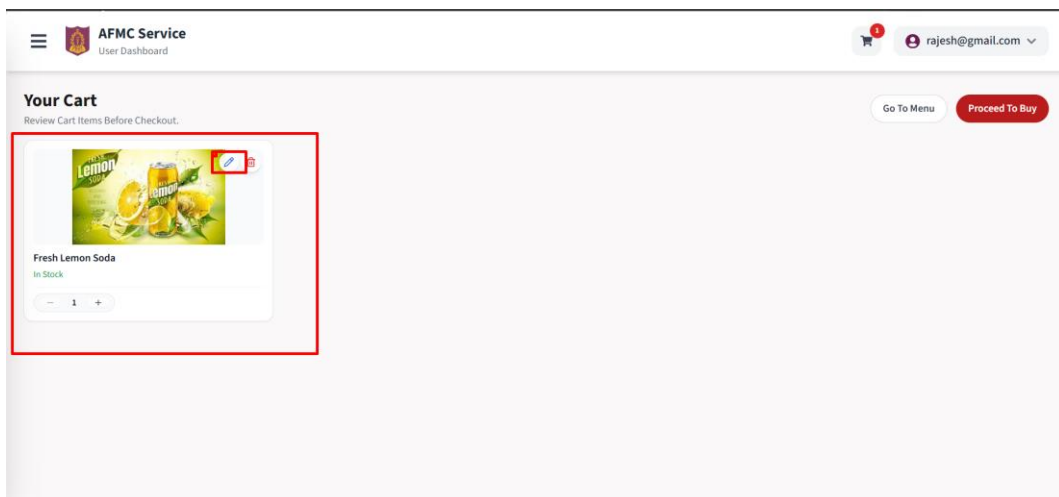

Figure 85: Cart with Cocktail Edit Option

6.6.3 Customizing Ingredients

The ingredient customization screen displays the default ingredients for the selected cocktail. Click the Add Ingredients button to open the ingredient selection dialog. Available ingredients are shown on the left; selected ingredients appear on the right.

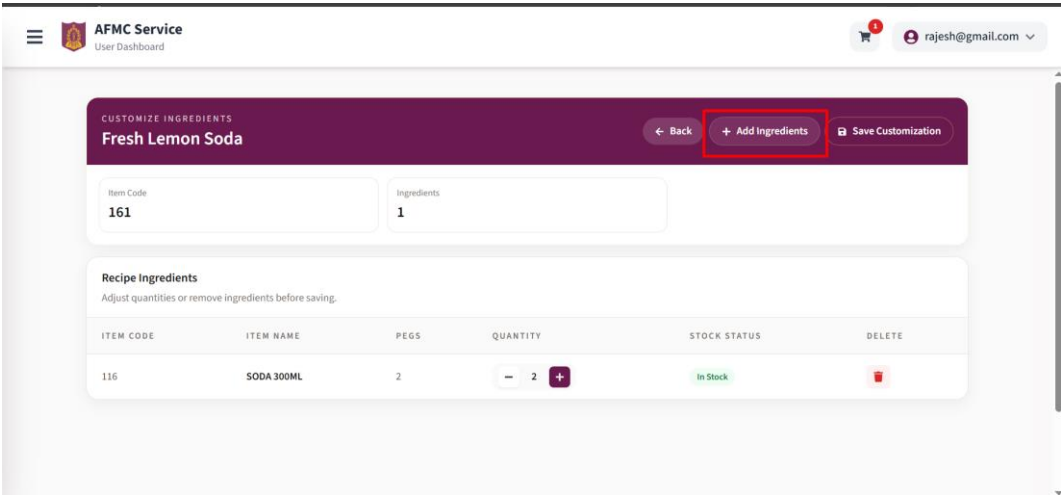

Figure 86: Ingredient Selection Dialog

Select up to three ingredients for your cocktail. If you attempt to add more than three, a warning message will be displayed. Similarly, if you try to add an ingredient that is already included, an 'Item Already Exists' alert will appear.

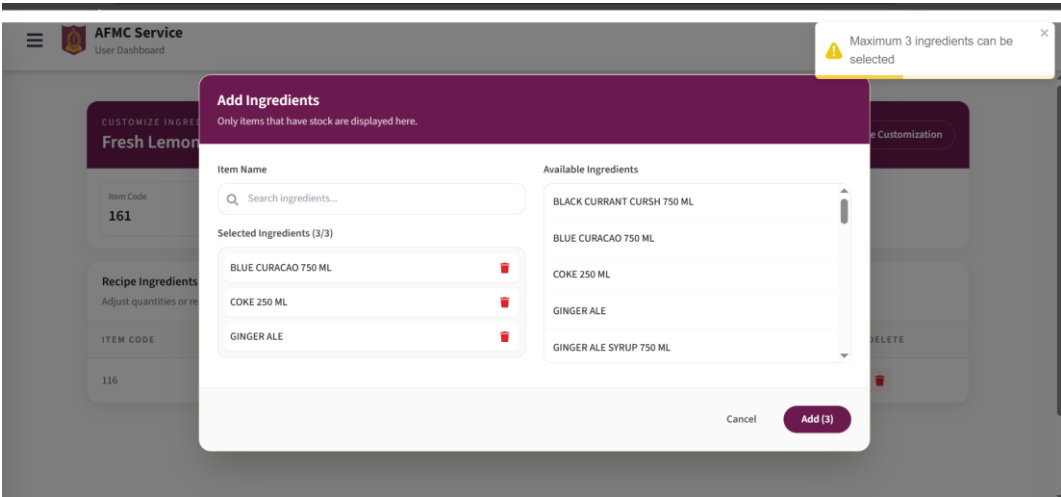

Figure 87: Maximum Ingredients Warning

For each selected ingredient, specify the quantity in pegs. The price will be automatically calculated based on the ingredient quantities. Use the plus and minus buttons to adjust quantities, or the trash icon to remove an ingredient.

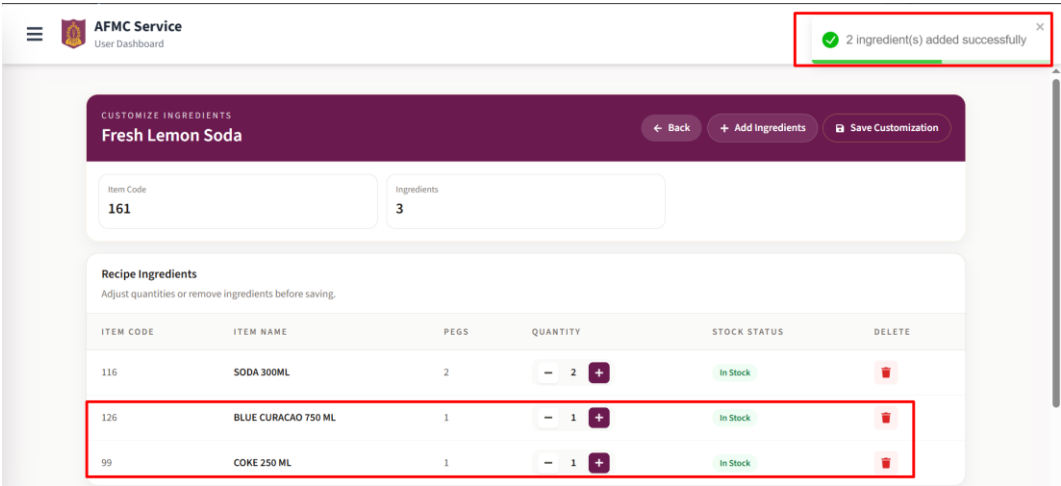

Figure 88: Setting Ingredient Quantities

If an ingredient is out of stock, you will not be able to proceed with that ingredient. Either remove it and continue without it, or substitute it with another available ingredient.

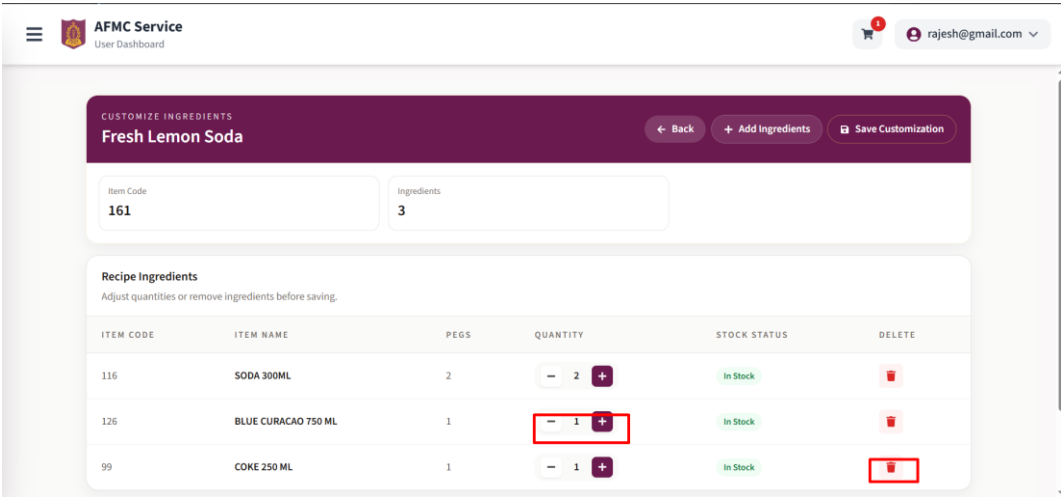

Figure 89: Out of Stock Ingredient Alert

After configuring your ingredients, click Save Customization. A success message will confirm your changes, and the customized cocktail will be updated in your cart with the modified ingredient list and recalculated price.

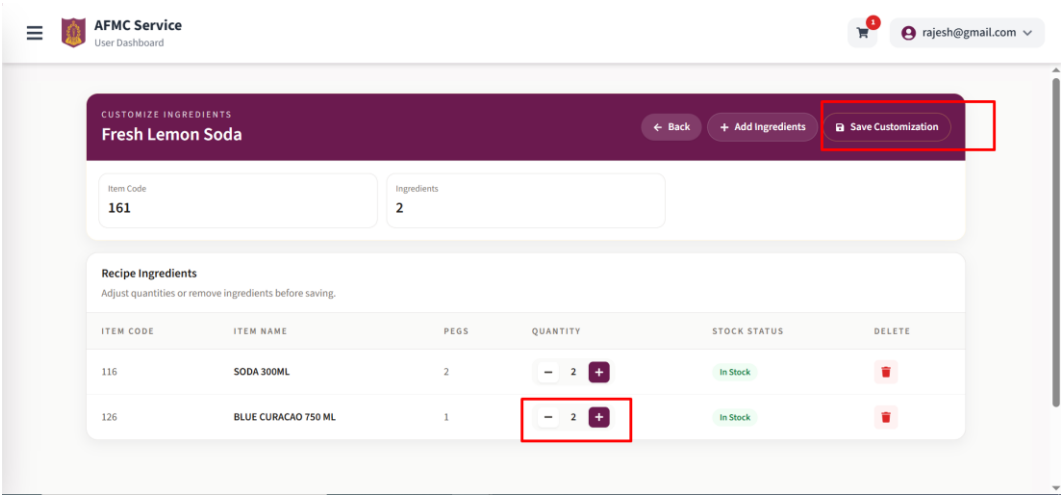

Figure 90: Saving Customized Ingredients

6.7 Order Confirmation & Payment

After proceeding from the cart, you will be taken to the order confirmation screen. Review your complete order including all items, quantities, and the total amount. You can still adjust quantities or remove items at this stage.

6.7.1 Confirming the Order

Verify all order details are correct. If you need to make changes, navigate back to the cart. When ready, click the Confirm Order button to submit the order to the kitchen.

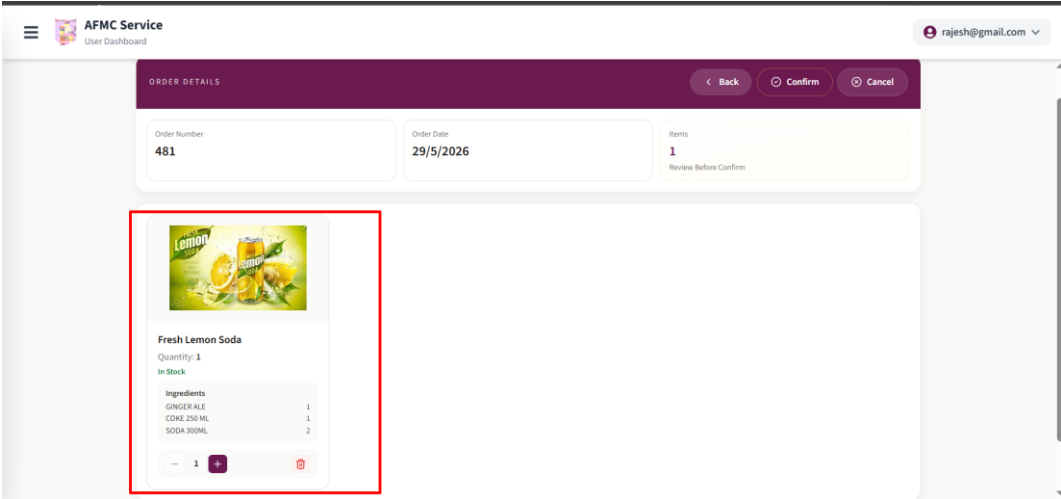

Figure 91: Order Confirmation Screen

After confirming the order, you will be redirected to the invoice report screen. This displays your order number, item details, quantities, prices, and the current order status. Initially, the status will show as 'Received' or 'Preparing'.

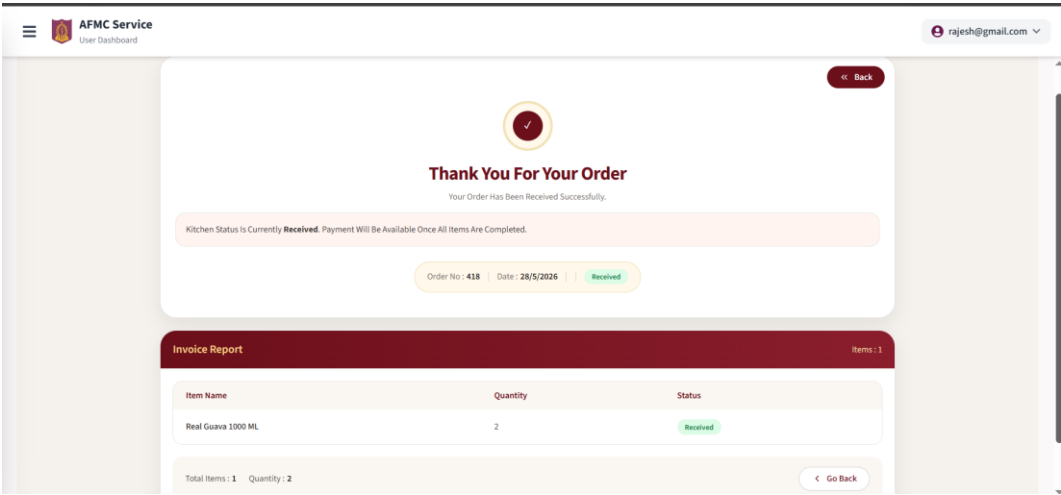

Figure 92: Order Invoice with Status

6.7.2 Making Payment

Once the kitchen staff has completed preparing your order, the status will update to 'Completed' and the Payment button will become active. Click the Payment button to navigate to the payment screen.

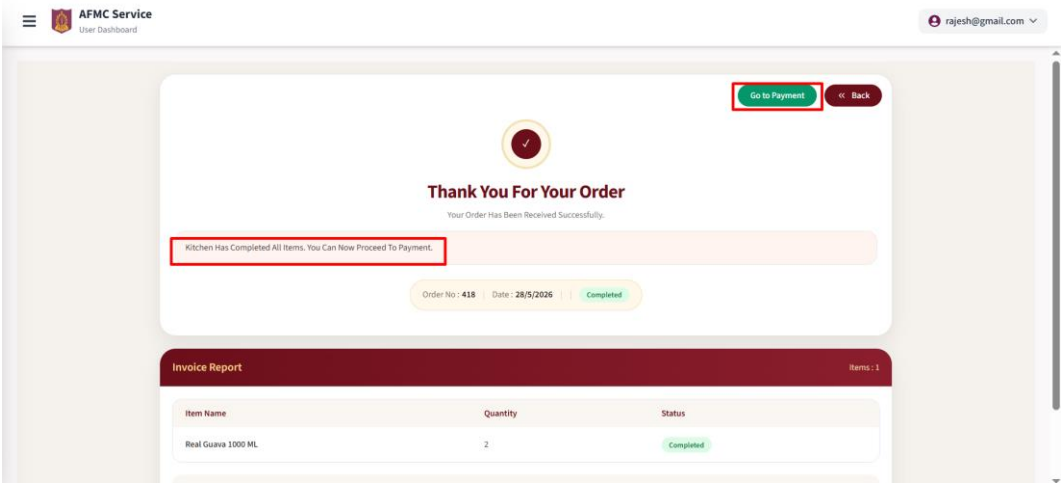

Figure 93: Payment Screen

The payment screen displays the final amount due. Enter the Payment ID (transaction reference number) and click Complete to finalize the payment. A payment confirmation will be displayed, and you will be redirected to the final invoice showing the payment status.

The screenshot shows the AFMC Service User Dashboard. At the top, there's a header with the AFMC Service logo and a user profile icon for 'rajesh@gmail.com'. Below the header, there's a section for 'ORDER NUMBER' (418) and 'ITEMS' (1). The main part of the dashboard is the 'Payment Panel', which includes a 'PAYMENT MODE' dropdown menu set to 'Immediate', a 'PAYMENT REFERENCE' field with a placeholder 'Enter Transaction Id', and 'Back' and 'Complete' buttons. Below the payment panel is the 'Order Items' section, which contains a table with the following data:

Item	Quantity	Price	Total
Real Guava 1000 ML	2	₹ 23.25	₹ 46.50

Figure 94: Entering Payment Details

The screenshot shows the AFMC Service User Dashboard after a successful payment. At the top, there's a header with the AFMC Service logo and a user profile icon for 'rajesh@gmail.com'. Below the header, there's a 'Thank You For Your Order' message with a sub-message 'Your Invoice Has Been Generated Successfully.' and a status bar showing 'Order No : 418 | Date : 28/5/2026 | Completed'. The main part of the dashboard is the 'Invoice Report' section, which includes a table with the following data:

Item Name	Quantity	Unit Price	Total
Real Guava 1000 ML	2	₹23.25	₹46.50
	2	Total	₹46.50

Figure 95: Payment Confirmation Invoice

6.8 Buy Flow

The drinks ordering flow allows users to browse beverage categories, select items, and add them to the cart. This section covers the standard ordering process for all drink items except cocktails and mocktails (which are covered separately).

6.8.1 Selecting a Category

From the menu dashboard, navigate to the Drinks section. Select the desired sub-category (e.g., Hard Drinks) from the dropdown filter. The menu will refresh to display only items matching the selected sub-category.

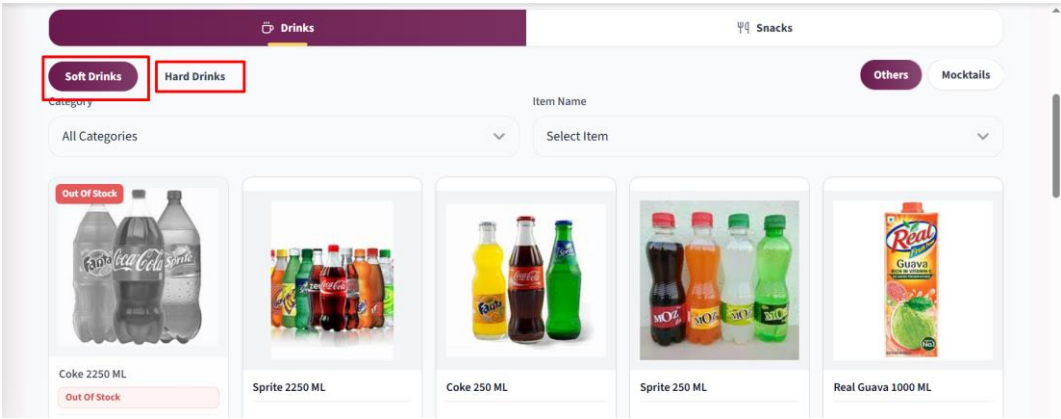

Figure 96: selecting category

6.8.2 Filtering by Item Name

Use the Item Name dropdown to further filter the menu. Click the dropdown to view all available items in the selected sub-category, or type to search for a specific item. Select an item to filter the display to that specific product.

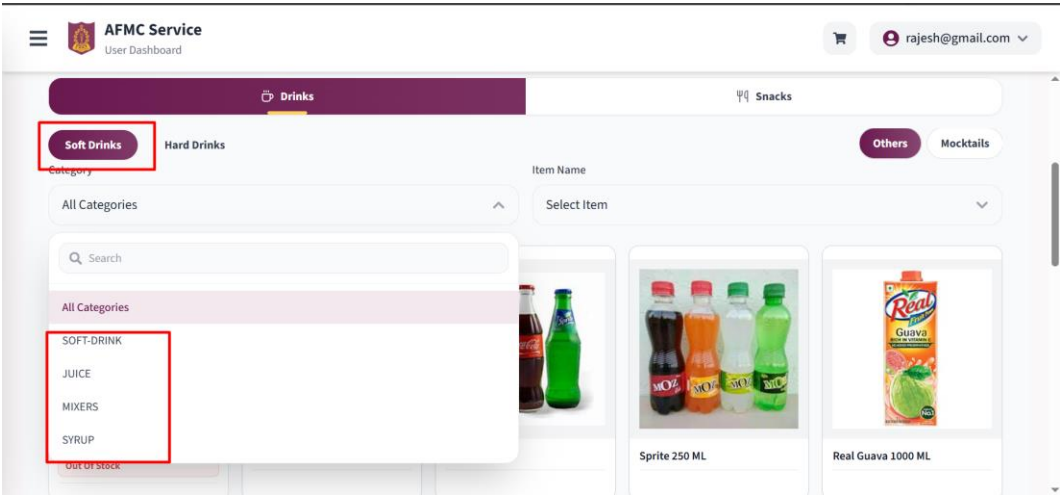

Figure 97: filtering category

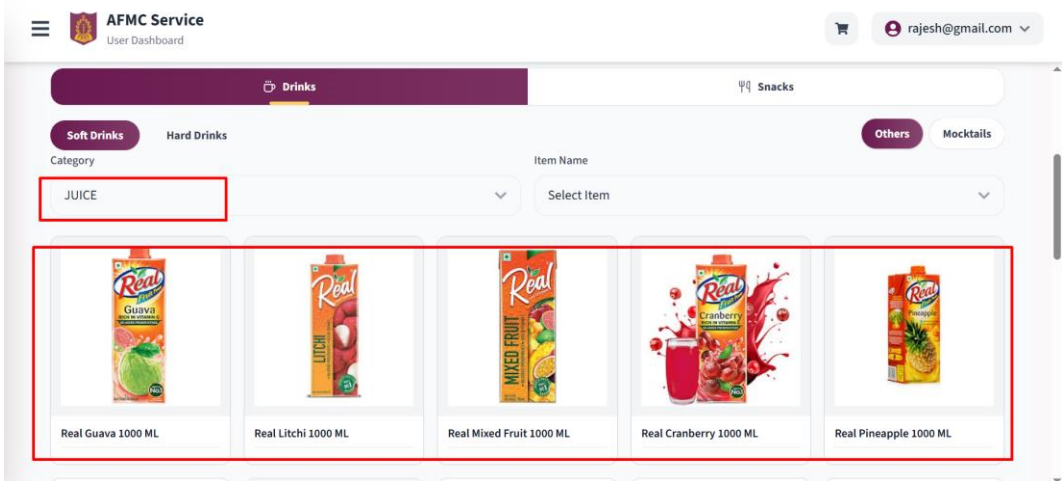

Figure 98: selected category display

6.8.3 Drinks Ordering Flow

Click on any menu item to open the order dialog. Select the service type (Dine-In or Takeaway) from the Remarks dropdown. Enter the desired quantity and click Bu. If the item has sufficient stock it will navigate to order details screen.

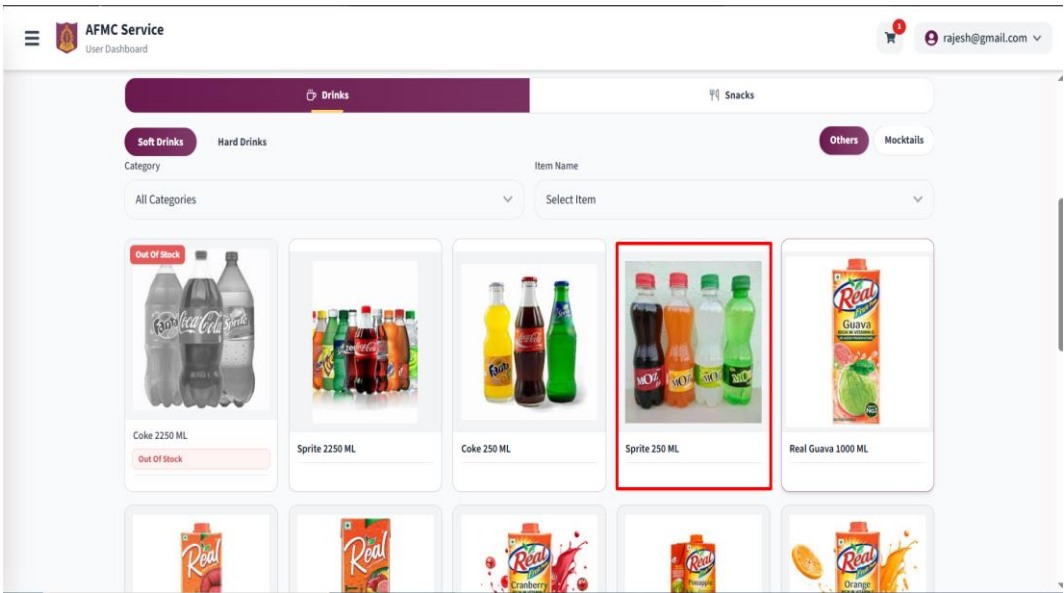

Figure 99: Drinks Ordering Flow - Step 1

If the requested quantity exceeds available stock, an 'Out of Stock' alert will be displayed. In this case, reduce the quantity or select a different item.

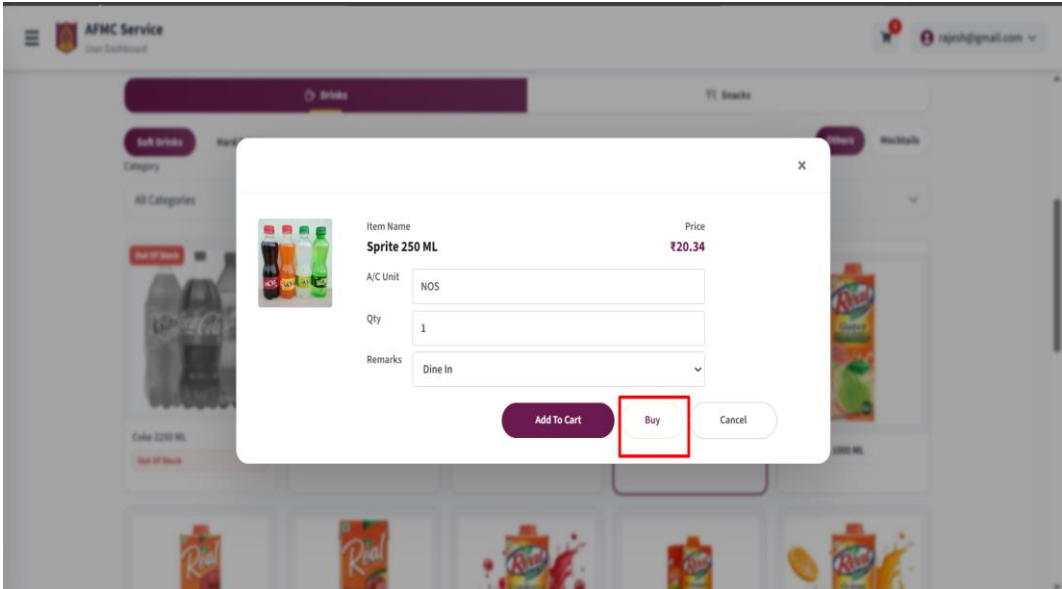

Figure 100: Drinks Ordering Flow - Step 2

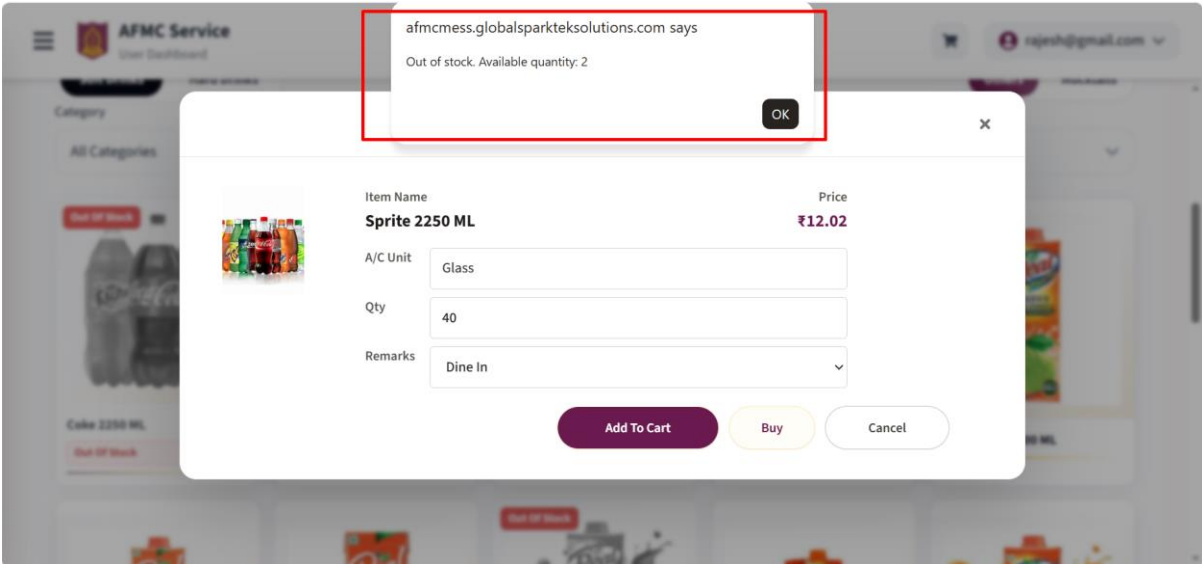

Figure 102: Out of Stock Alert

Upon successful Buy, it will navigate to the order details screen. there we can customize the orders.

6.9 Snacks Ordering Flow

The snacks ordering flow follows the same pattern as drinks. Navigate to the Snacks section of the menu dashboard. The two sub-categories are Vegetarian (Veg) and Non-Vegetarian (Non-Veg).

Select the desired sub-category, then use the item name filter to locate specific items. Click on an item to open the order dialog, select the service type and quantity, then click Buy.

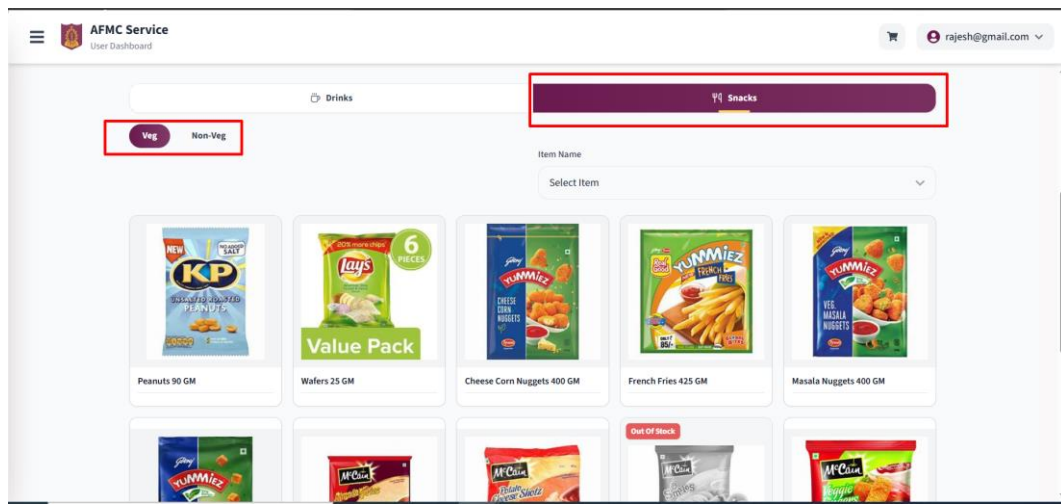

Figure 103: Snacks Menu with Sub-categories

The Buy flow for snacks is identical to the drinks buy flow described in the following section. All Buy operations including quantity adjustment, item deletion, and checkout apply uniformly across both categories.

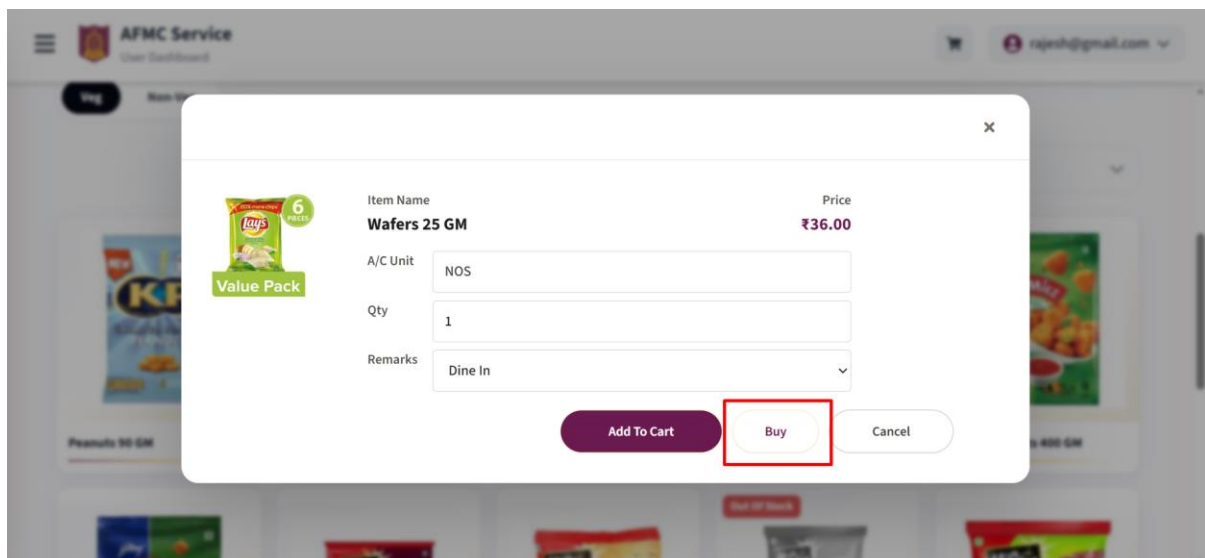

Figure 104: Snack Item Order Dialog

6.10 Buy Flow Order Management

The Buy flow order management interface provides tools for reviewing and modifying your order before checkout.

6.10.1 Viewing Buy Order Contents

The Order Details page displays all purchased items, including the item name, unit price, quantity, and subtotal for each entry. Review your order details carefully before proceeding to checkout.

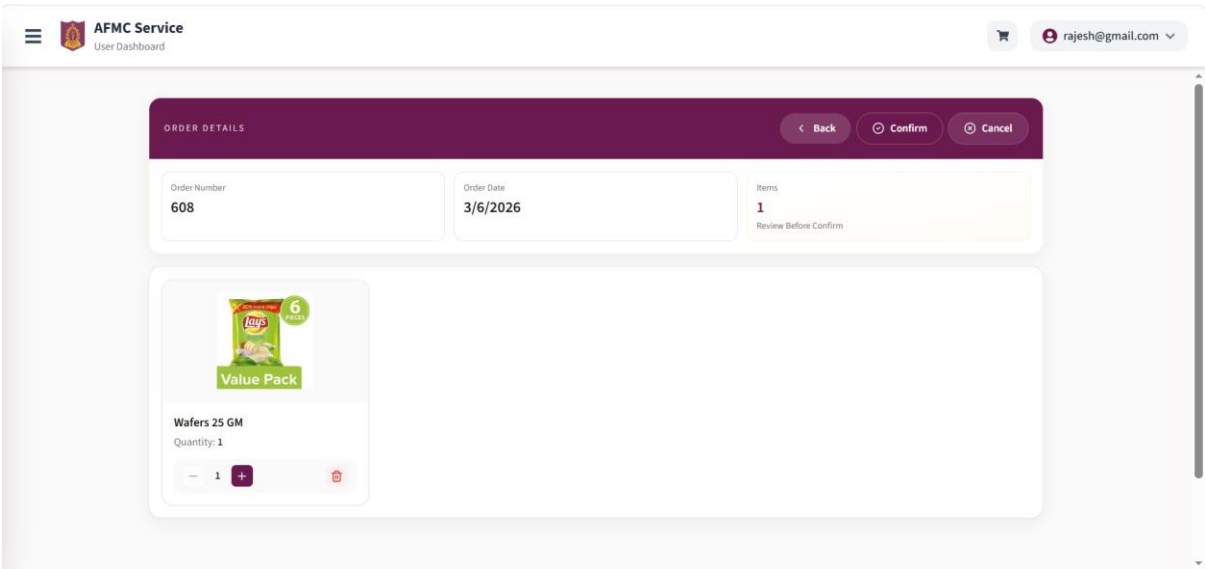

Figure 105: confirm order screen

6.10.2 Adjusting Quantities

To change the quantity of an item, use the plus (+) and minus (-) buttons next to buy entry. The subtotal will automatically recalculate, and a confirmation message will display when the quantity is updated.

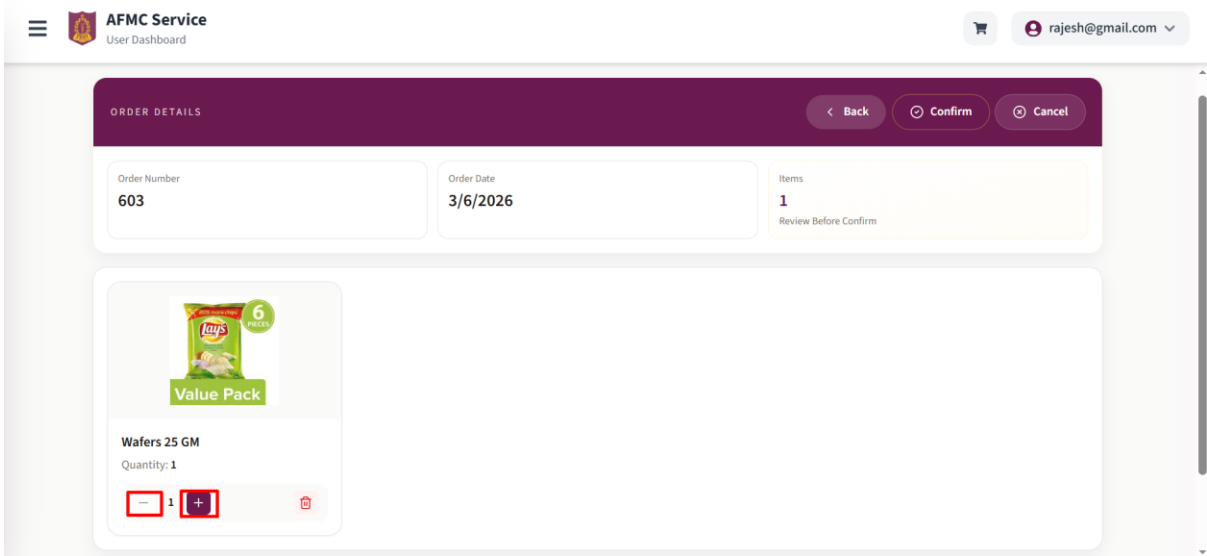

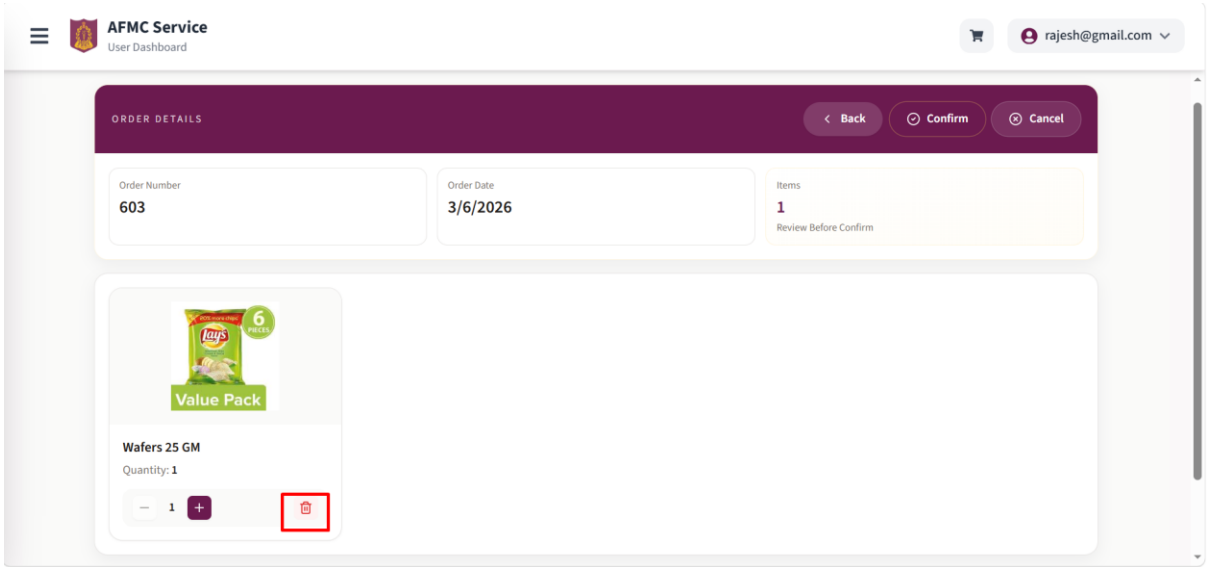

Figure 106: Adjusting Item Quantities

6.10.3 Deleting Items

To remove an item from the order details page, click the **Delete (Trash)** icon displayed next to the item. Once selected, the item will be immediately removed from the order, and the order summary will be updated automatically to reflect the change.

After the item is deleted, the system will redirect you to the **Menu Dashboard**, allowing you to continue browsing and selecting additional items. This enables users to modify their order before final confirmation and easily add replacement items if required.

Ensure that all required items are included in the order before proceeding with the purchase process.

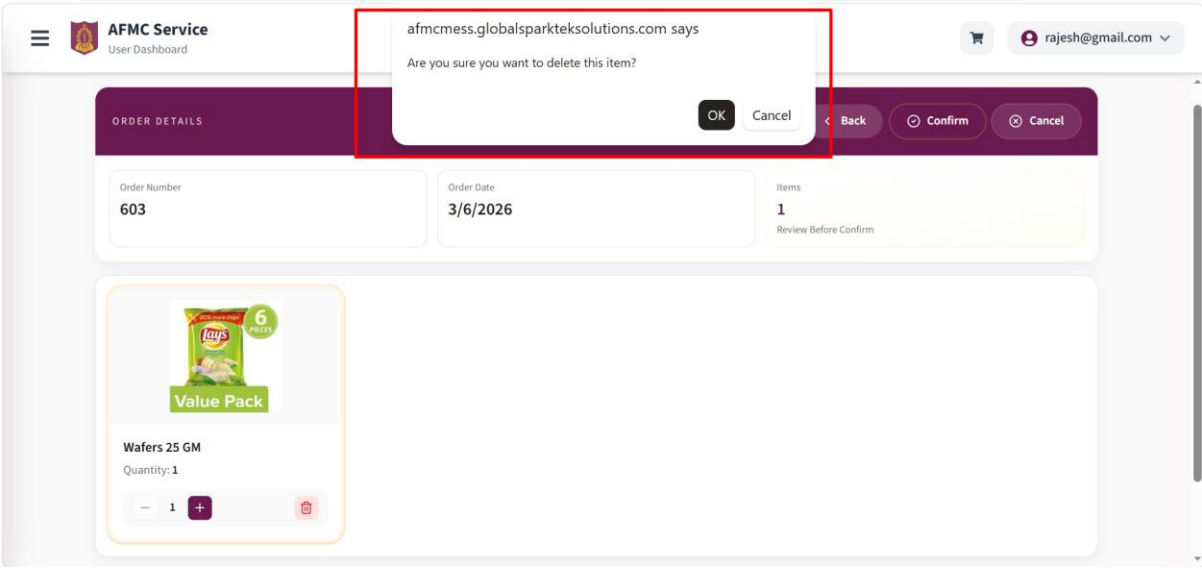

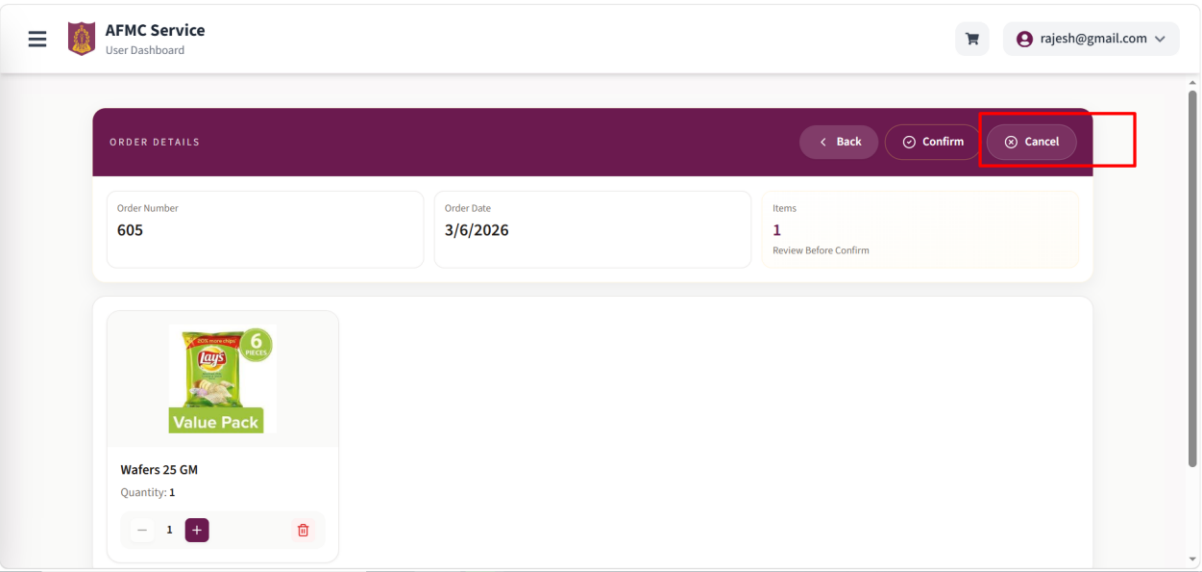

Figure 107: Deleting an Item

6.10.4 cancelling the order

To cancel the order, click the Cancel button located at the top-right corner of the Order Details page. A confirmation dialog will appear asking whether you want to cancel the order.

Click OK to confirm the cancellation. The order will be cancelled immediately, and you will be redirected to the Menu Dashboard.

If you do not wish to cancel the order, click Cancel in the confirmation dialog to close the prompt and return to the Order Details page without making any changes to your order.

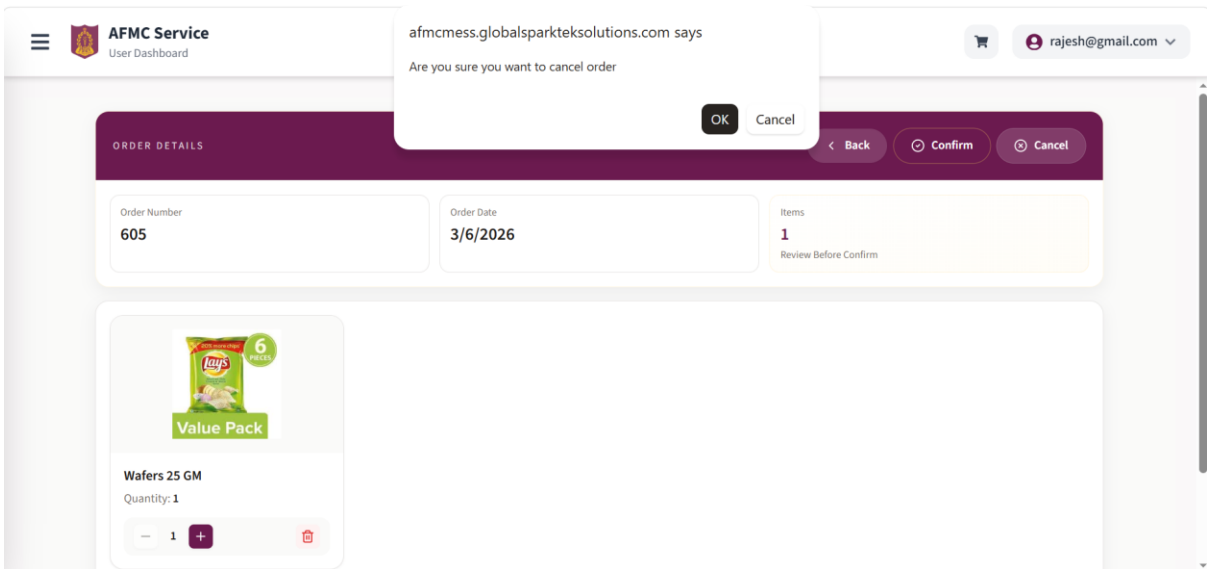

Figure 108: cancelling an Item

6.10.5 Proceeding to Checkout

When you are satisfied with the order details, click the **Confirm** button to proceed with your purchase. You will navigate to the invoice report screen

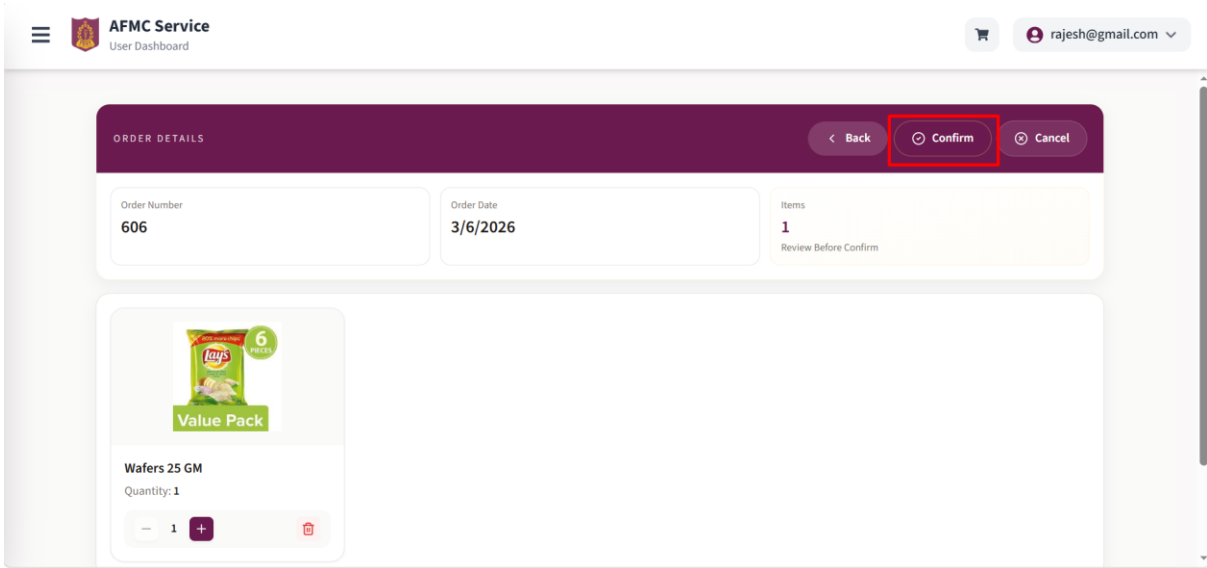

Figure 109: confirm an Item

6.11 Cocktail / Mocktail Ordering

Ordering cocktails and mocktails follows a similar process to standard drinks but includes an additional ingredient customization step. This allows users to personalize their mixed drinks by adding or modifying ingredients.

6.11.1 Selecting a Cocktail/Mocktail

To select Cocktail:

Navigate to the Drinks section and select the Hard Drinks sub-category. From the item type filter, select Cocktails to display available cocktail items. Use the item name filter to locate a specific drink.

To select mocktail:

Navigate to the Drinks section and select the Soft Drinks sub-category. From the item type filter, select Mocktails to display available mocktail items. Use the item name filter to locate a specific drink.

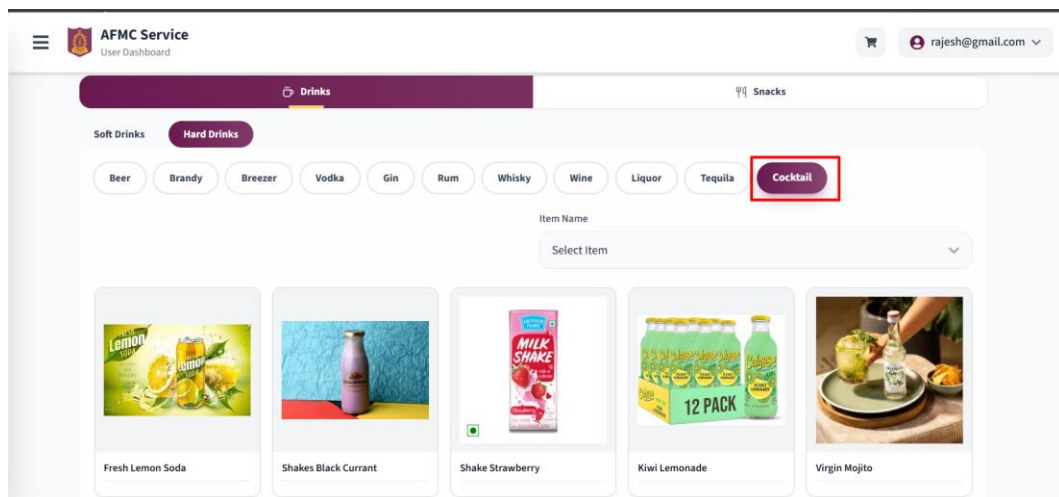

Figure 110: Selecting Cocktail Category

6.11.2 Filtering by Item Name

Use the Item Name dropdown to further filter the menu. Click the dropdown to view all available items in the selected sub-category, or type to search for a specific item. Select an item to filter the display to that specific product.

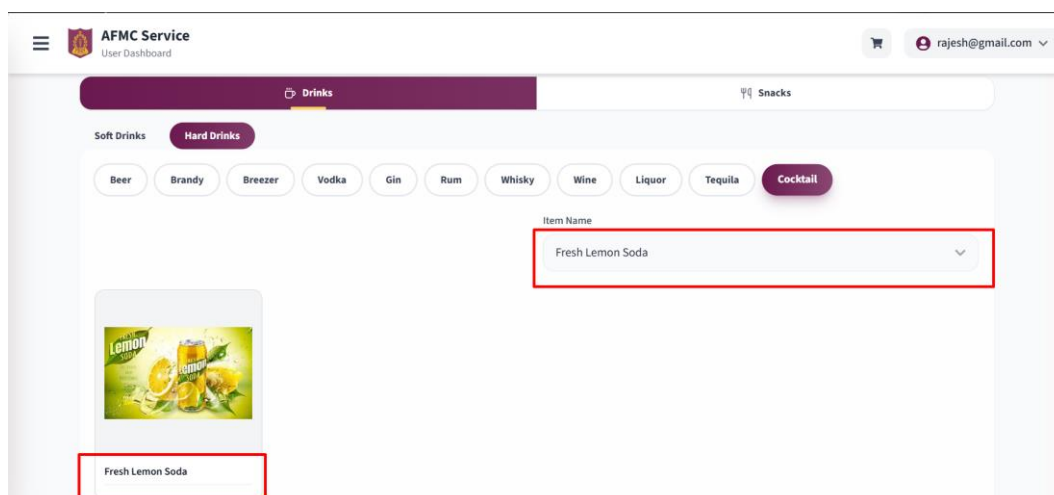

Figure 111: Cocktail/Mocktail filtered Menu Display

6.11.3 Proceeding to Buy with Customization

Click on a cocktail item to open the order dialog. Select the service type and quantity, then click on buy. After that you will navigate to the confirm order page.

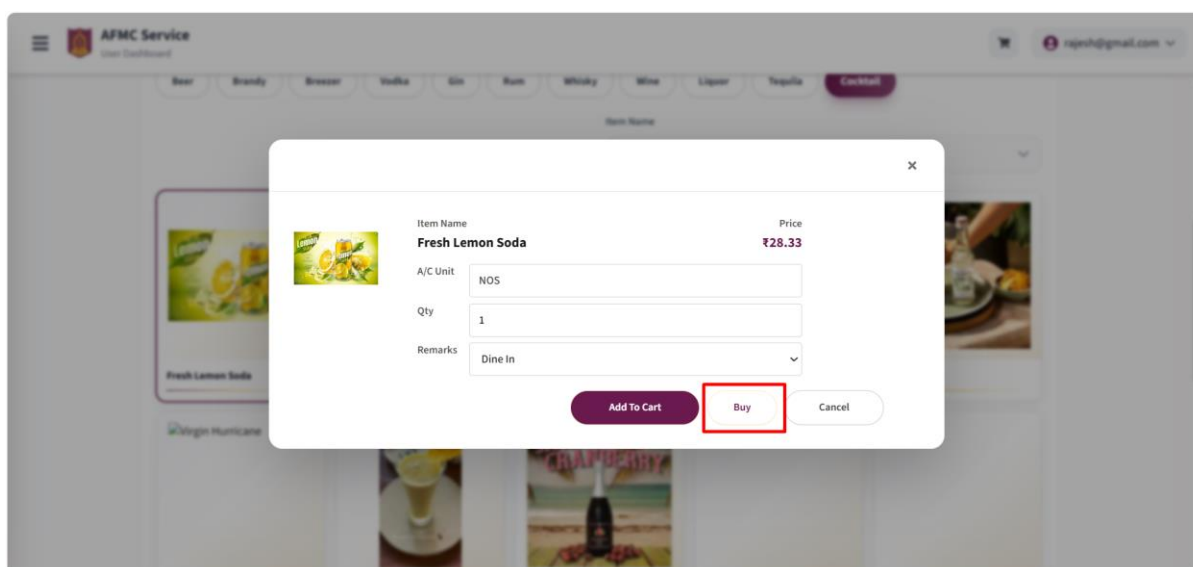

Figure 112: Cocktail Order Dialog

In the confirm order screen, cocktail and mocktail items display an edit (pencil) icon that allows ingredient customization. Click this icon to open the ingredient management interface.

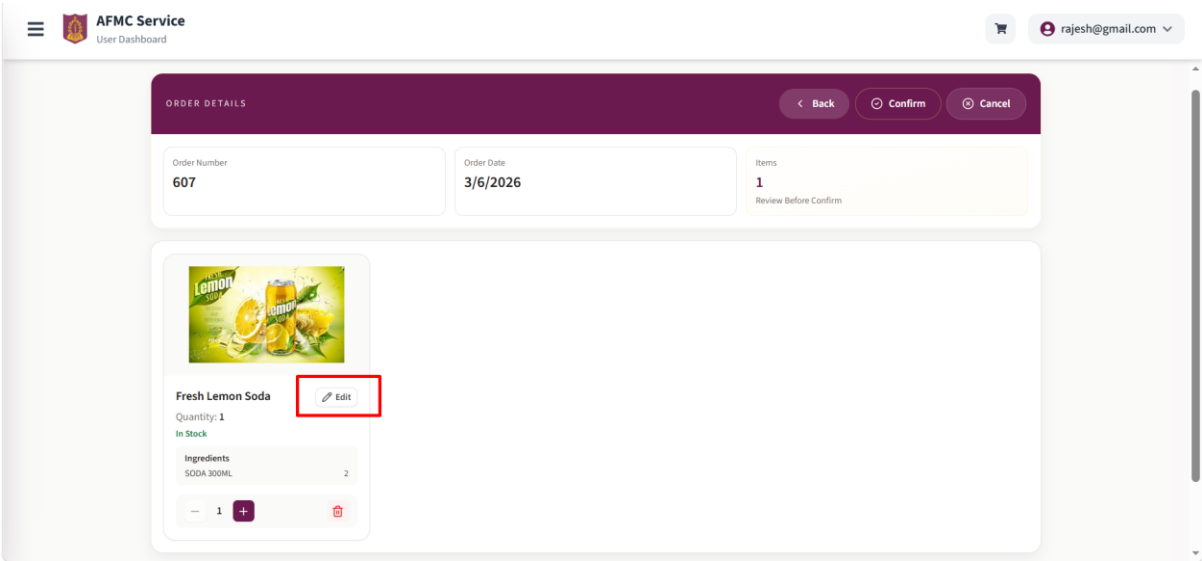

Figure 113: confirm order screen with Cocktail Edit Option

6.11.4 Customizing Ingredients

The ingredient customization screen displays the default ingredients for the selected cocktail. Click the Add Ingredients button to open the ingredient selection dialog. Available ingredients are shown on the left; selected ingredients appear on the right.

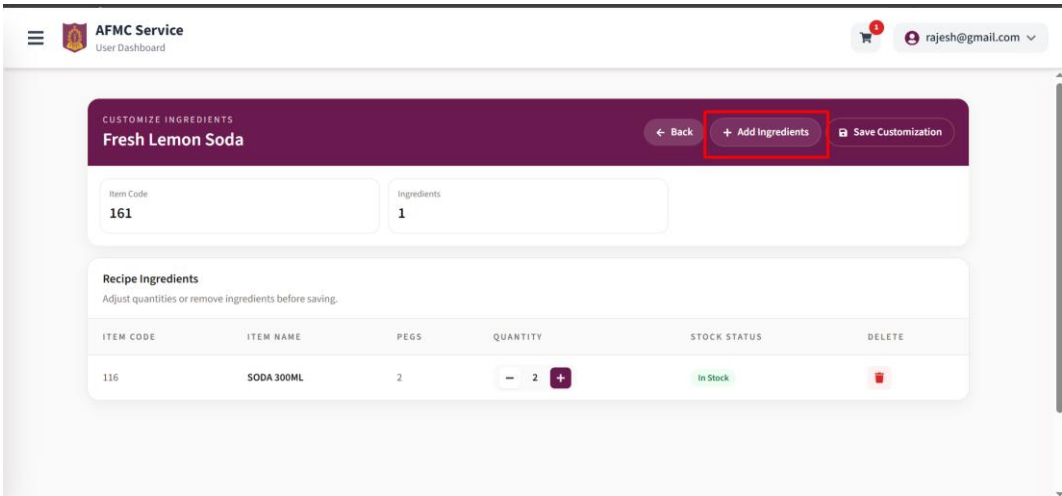

Figure 115: Ingredient Selection Dialog

Select up to three ingredients for your cocktail. If you attempt to add more than three, a warning message will be displayed. Similarly, if you try to add an ingredient that is already included, an 'Item Already Exists' alert will appear.

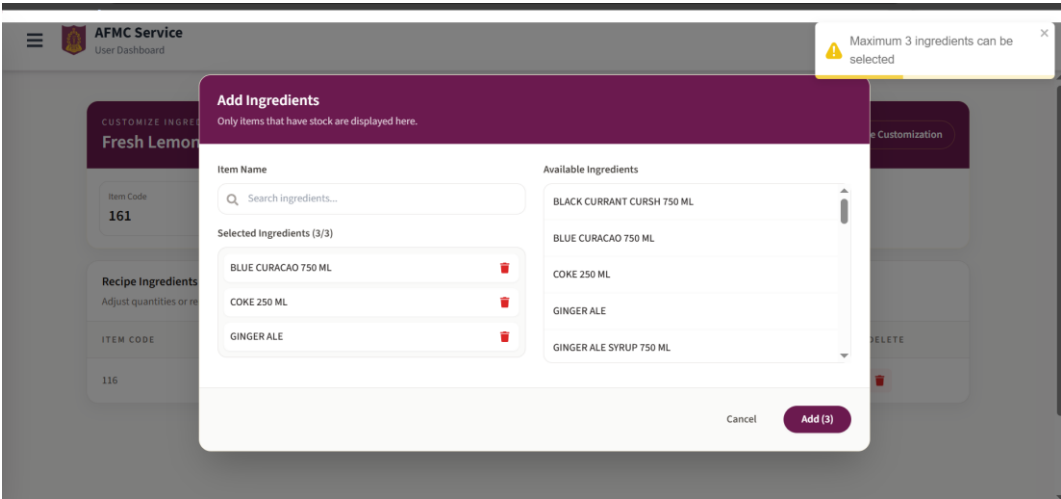

Figure 116: Maximum Ingredients Warning

For each selected ingredient, specify the quantity in peps. The price will be automatically calculated based on the ingredient quantities. Use the plus and minus buttons to adjust quantities, or the trash icon to remove an ingredient.

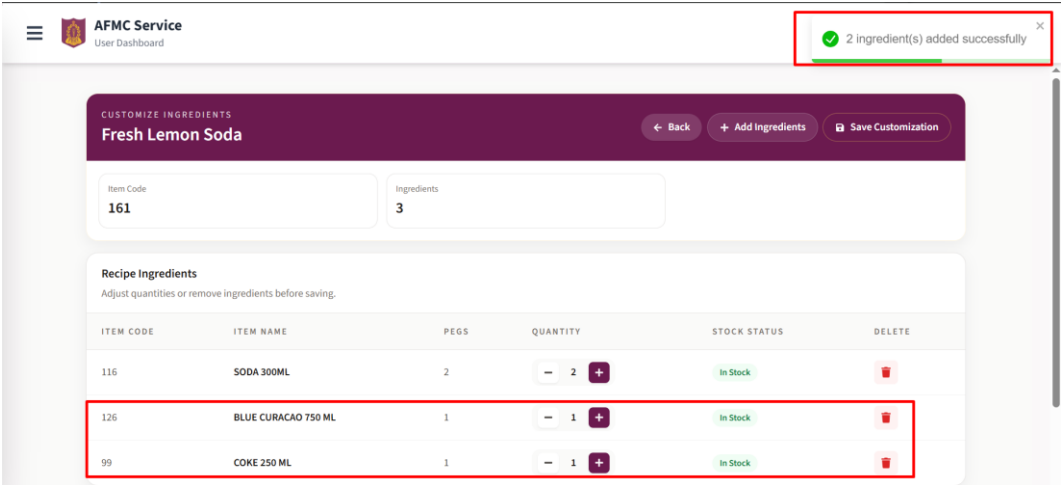

Figure 117: Setting Ingredient Quantities

If an ingredient is out of stock, you will not be able to proceed with that ingredient. Either remove it and continue without it, or substitute it with another available ingredient.

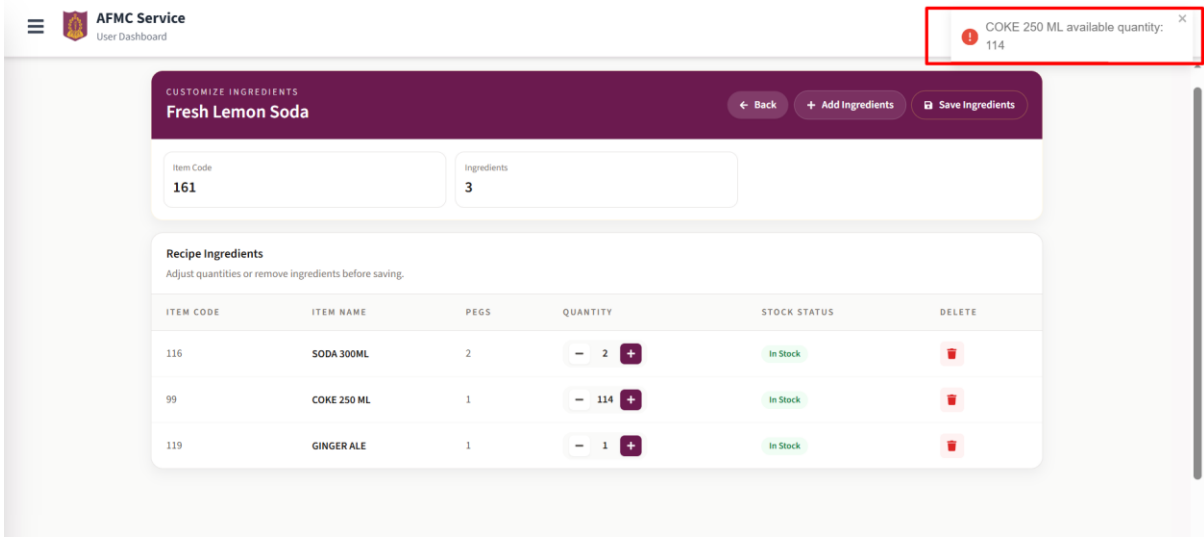

Figure 1181: Out of Stock Ingredient Alert

After configuring your ingredients, click Save Customization. A success message will confirm your changes, and the customized cocktail will be updated in your cart with the modified ingredient list and recalculated price.

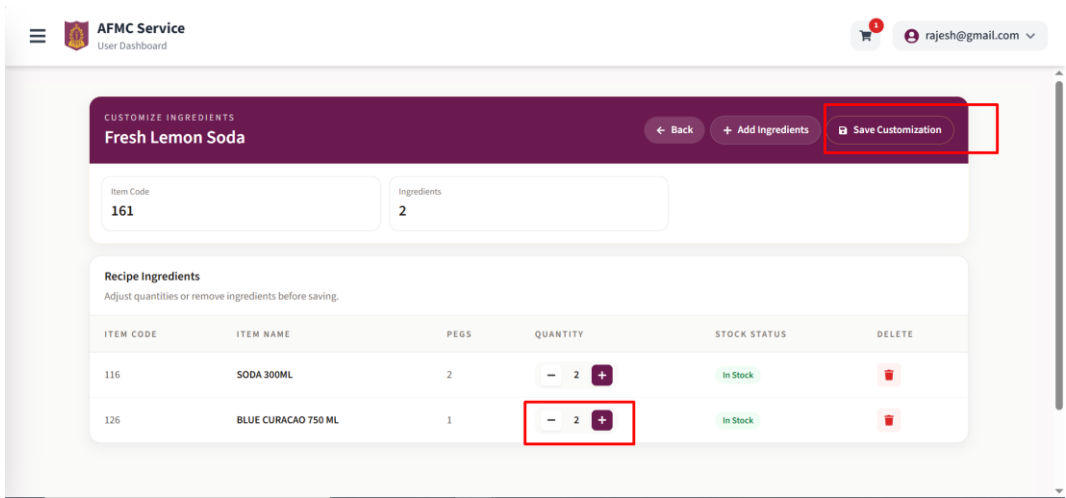

Figure 119: Saving Customized Ingredients

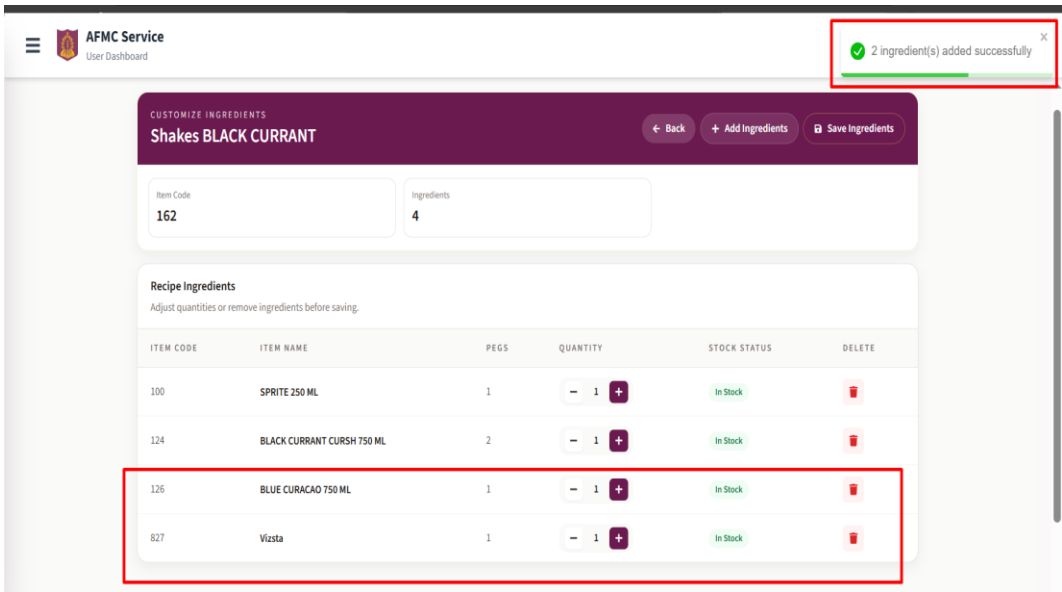

Figure 120: Selected ingredients showing

6.11.5 Order Details screen

After saving ingredients, you will be taken to the order confirmation screen. Review your complete order including all items, quantities, and the total amount. You can still adjust quantities or remove items at this stage.

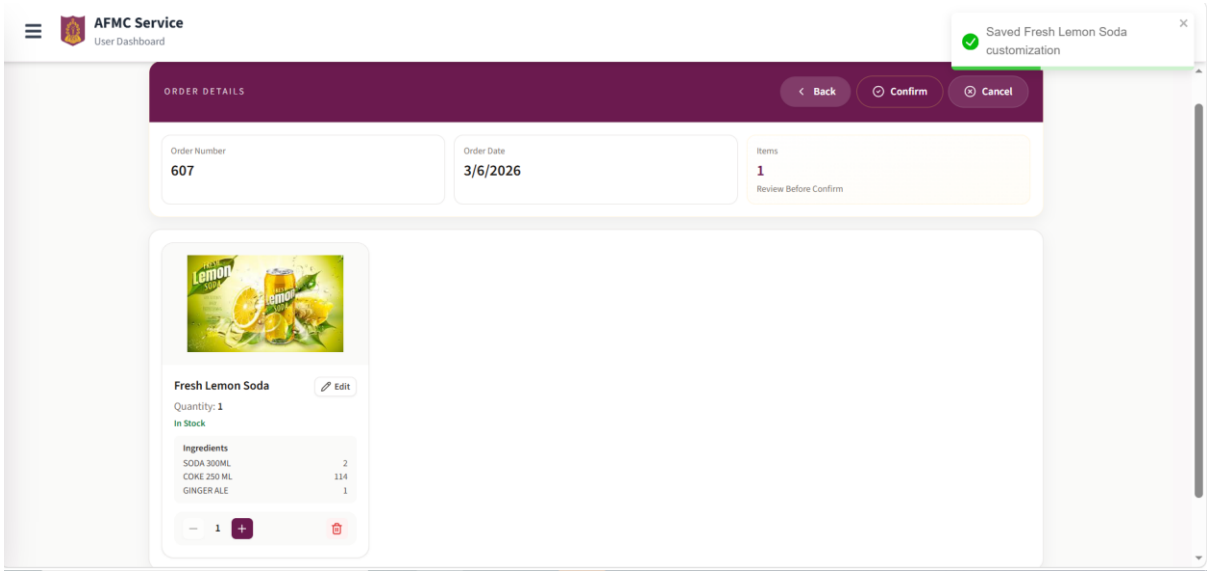

Figure 121: Selected ingredients showing

6.12 Order Confirmation & Payment

After proceeding from the cart, you will be taken to the order confirmation screen. Review your complete order including all items, quantities, and the total amount. You can still adjust quantities or remove items at this stage.

6.12.1 Confirming the Order

Verify all order details are correct. If you need to make changes. When ready, click the Confirm Order button to submit the order to the kitchen.

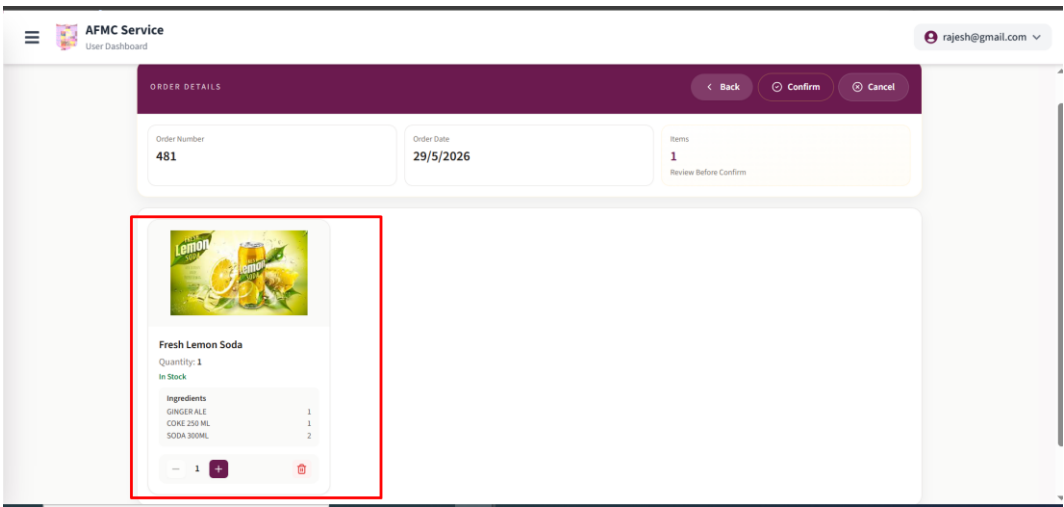

Figure 122: Order Confirmation Screen

After confirming the order, you will be redirected to the invoice report screen. This displays your order number, item details, quantities, prices, and the current order status. Initially, the status will show as 'Received'.

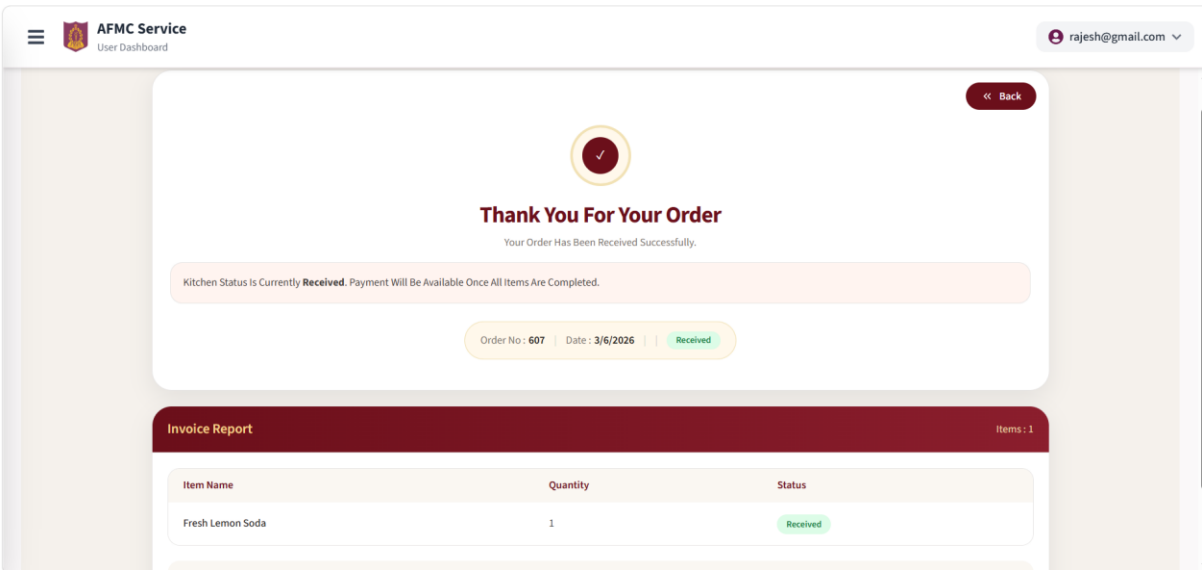

Figure 123: invoice report Screen

Once the user started preparing the order the status update to preparing.

6.12.2 Making Payment

Once the kitchen staff has completed preparing your order, the status will update to 'Completed' and the Payment button will become active. Click the Payment button to navigate to the payment screen.

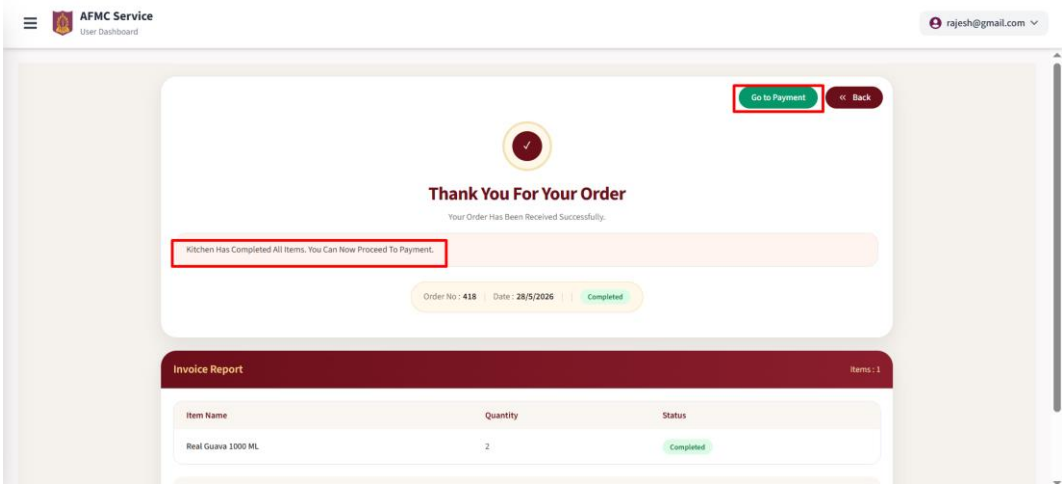

Figure 124: Payment button enable

The payment screen displays the final amount due. Enter the Payment ID (transaction reference number) and click Complete to finalize the payment. A payment confirmation will be displayed, and you will be redirected to the final invoice showing the payment status.

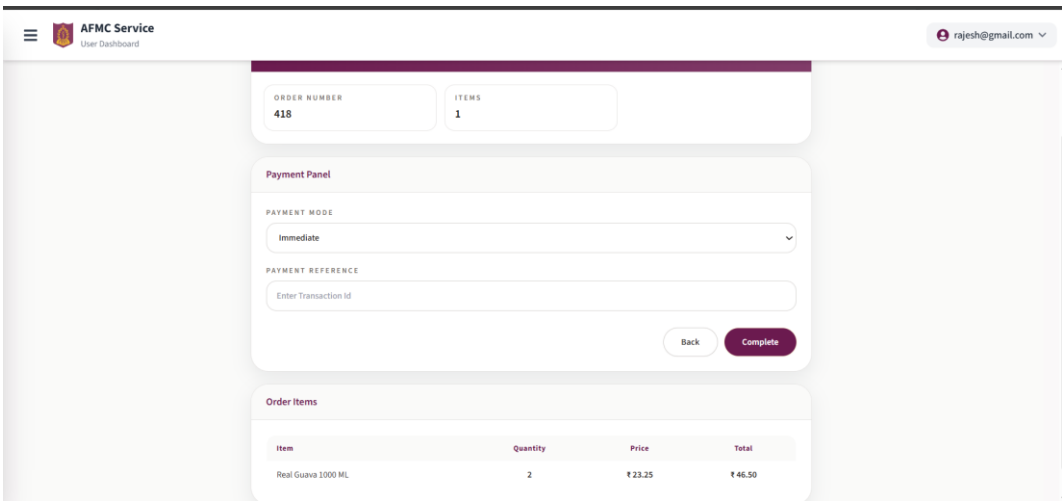

Figure 125: Entering Payment Details

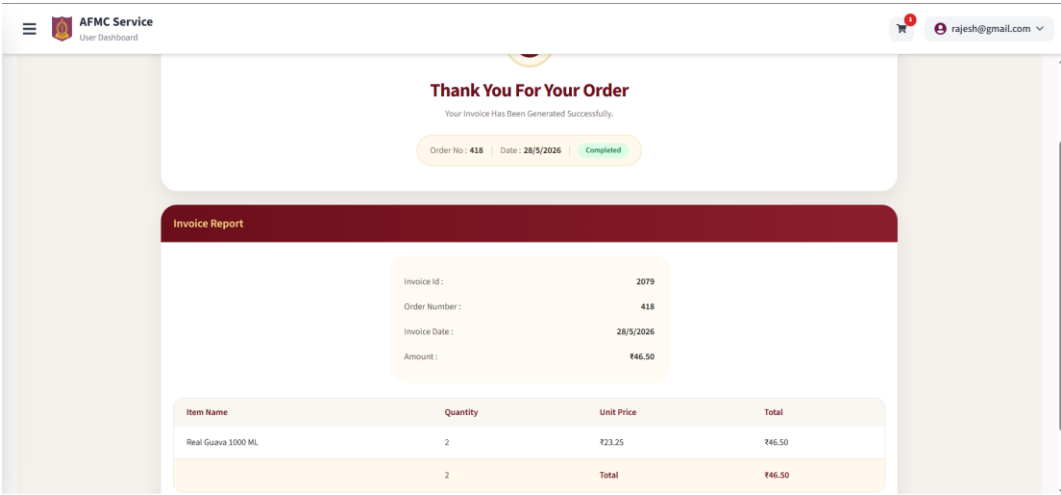

Figure 126: Payment Confirmation Invoice

6.13 Active Orders

You can view the status of your active orders at any time. The Active Orders section displays today's orders with their current status. Once payment is completed, the order will be marked as fully processed.

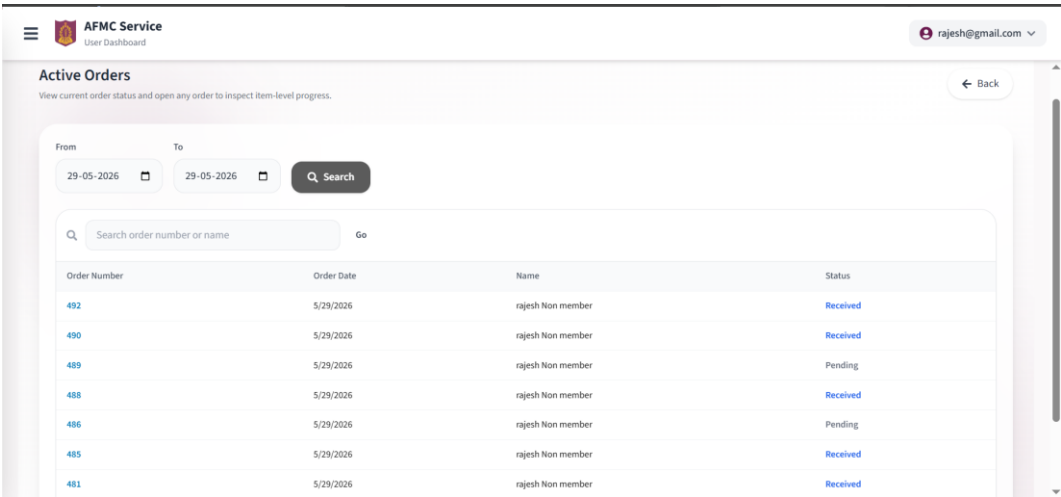

Figure 127: Active Orders Dashboard

If the user clicks on the **Order Number**, a **modal pop-up** will appear displaying the complete **order details** for that selected order.

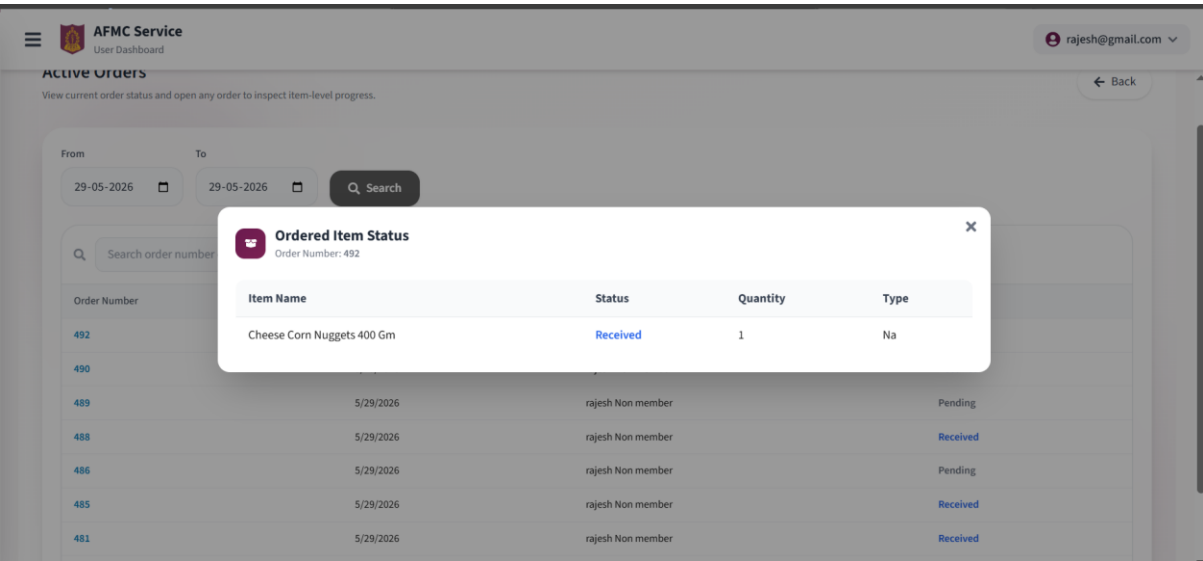

Figure 128: Active Orders Order details

6.14 Orders Status

If payment has already been completed for an order, no additional payment action is required or permitted. The order status will display as paid and completed.

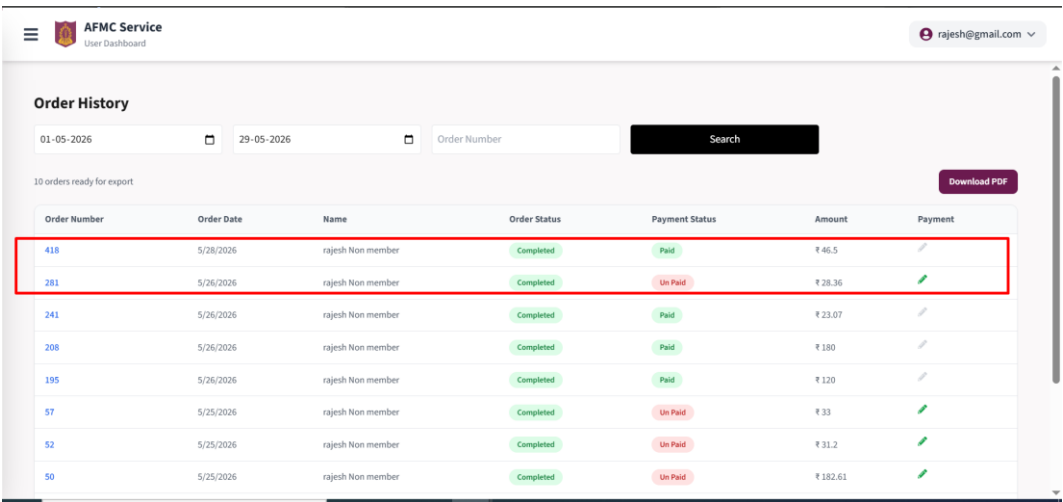

Figure 129: Completed and Paid Order

If the user clicks on the **Order Number**, a **modal pop-up** will appear displaying the complete **order details** for that selected order.

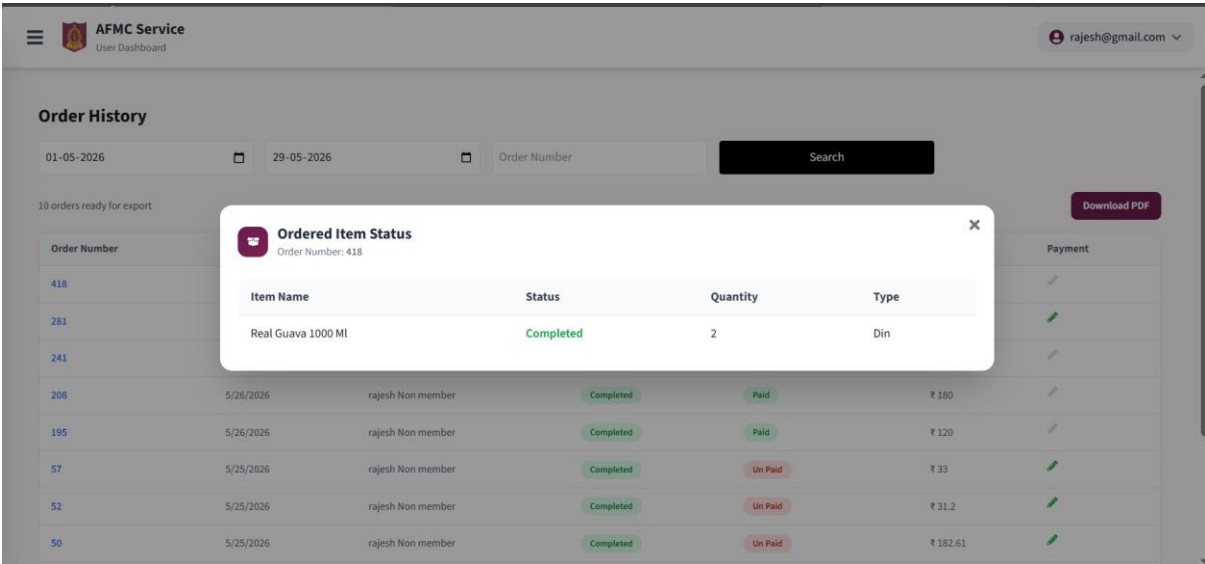

Figure 130: Orders Status Order details

7. Kitchen Flow

The Kitchen Flow covers all activities performed by kitchen staff to process and fulfill incoming orders. The system supports two specialized kitchen types: the Mess Kitchen (for snack/food preparation) and the Bar Kitchen (for drink preparation). This section provides detailed guidance for kitchen personnel.

7.1 Login & Kitchen Selection

Kitchen staff access the system using the same login URL as other users. After entering valid credentials, you will be presented with a kitchen selection screen where you must choose your assigned kitchen type:

- 24. Mess Kitchen: For staff responsible for preparing snack and food items
- 25. Bar Kitchen: For staff responsible for preparing drink and beverage items

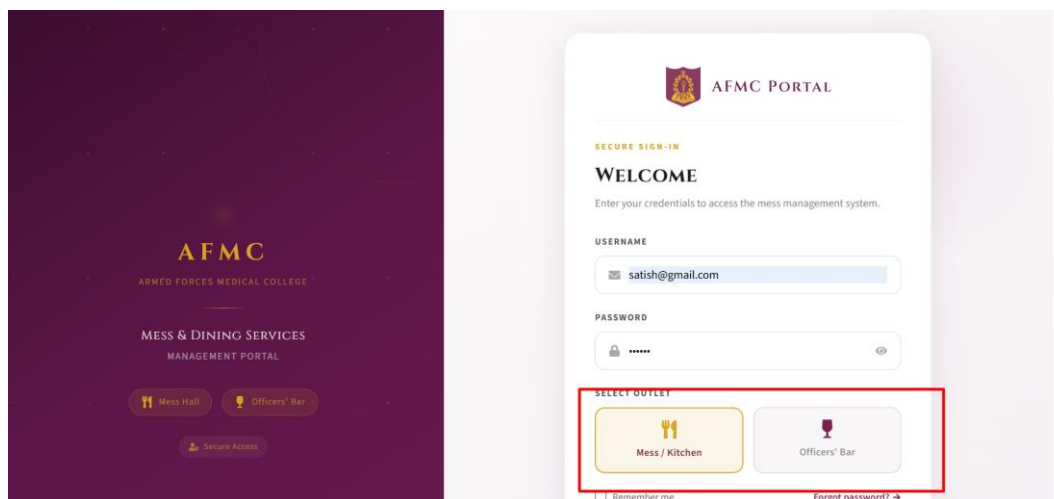

Figure 131: Kitchen Selection Screen

Select the appropriate kitchen type and click Sign In to access your dedicated kitchen dashboard. Each kitchen type has a specialized interface optimized for the specific items being prepared.

7.2 Mess Kitchen (Snack Orders)

After selecting Mess Kitchen and signing in, you will be directed to the Kitchen Orders screen. This interface displays all incoming snack orders organized by status and priority.

7.2.1 Order Display and Notifications

The kitchen dashboard displays orders in a structured format with the following status indicators:

- 26. Received: New orders that have just been placed

27. Preparing: Orders that are currently being processed

28. Completed: Orders that have been fully prepared and served

The bell icon in the top navigation bar indicates the number of pending orders. Click the bell icon to view a popup summary of recent order notifications.

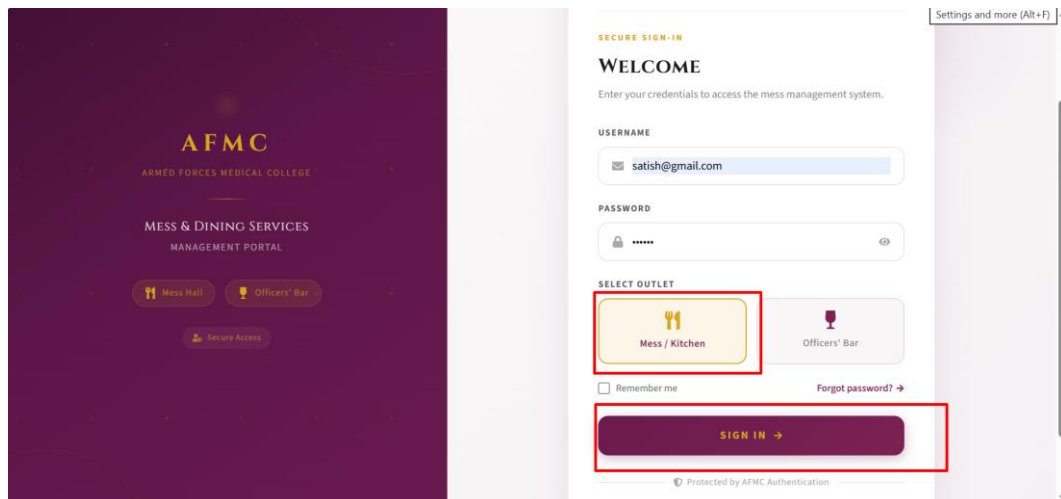

Figure 132: Mess Kitchen Orders Screen

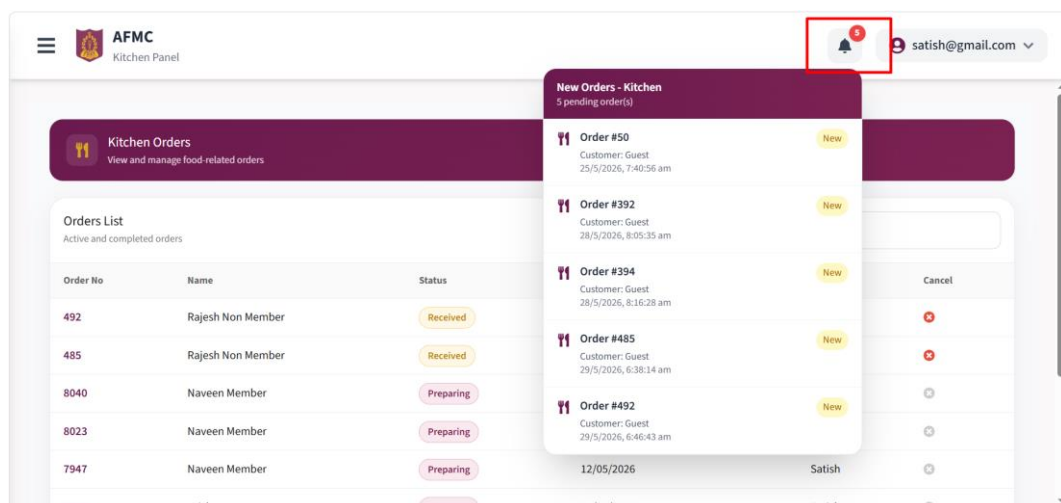

Figure 133: Order Notification Popup

7.2.2 Processing an Order

Click on any order number to open the order details screen. This action automatically updates the order status from 'Received' to 'Preparing'. The order details display all items to be prepared with their quantities.

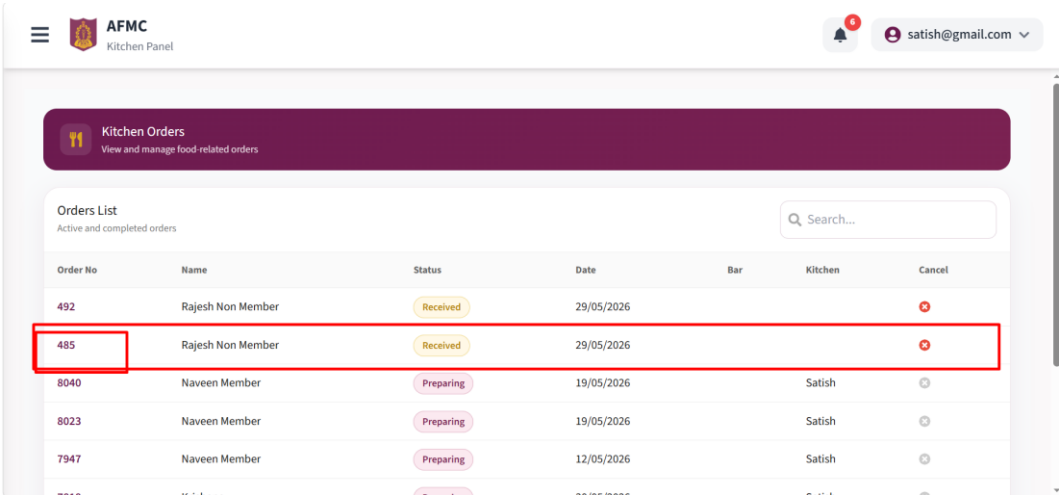

Figure 134: Order Details Screen

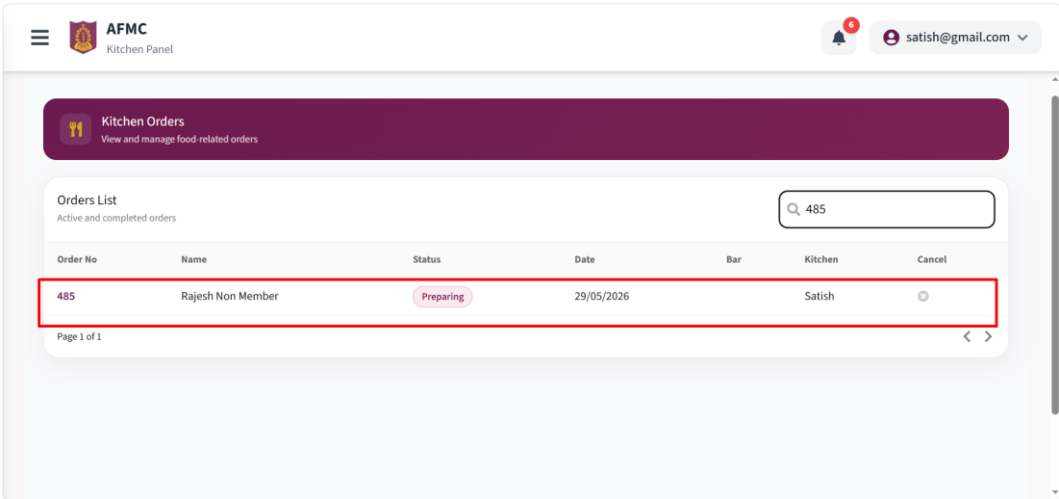

Figure 135: Order Status Updated to Preparing

7.2.3 Barcode Verification

For order verification, kitchen staff can use barcode scanning. There are two methods available:

Method 1 - Manual Barcode Entry: Enter the item's barcode number in the designated field and press Enter. The system will validate the barcode and display the corresponding item details.

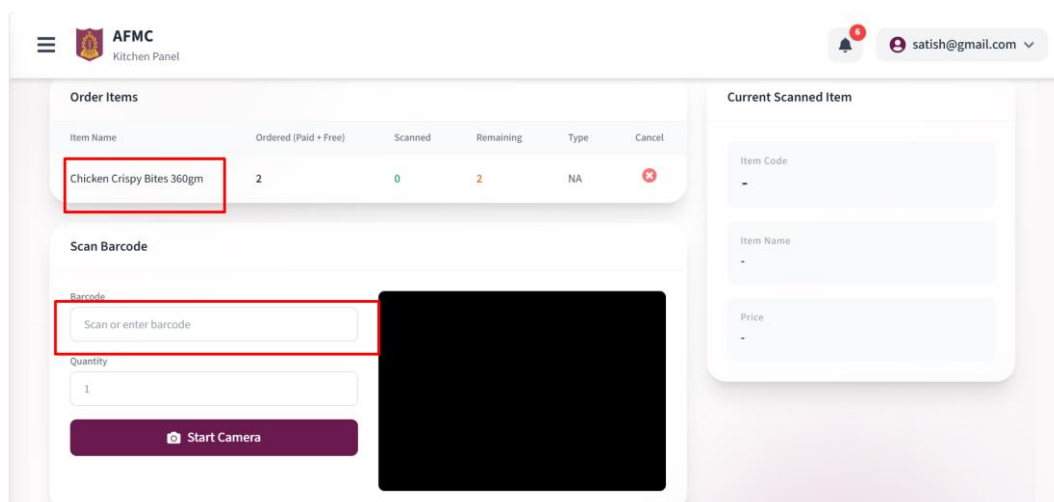

Figure 136: Manual Barcode Entry

Method 2 - Camera Scan: Click the Start Camera button to activate the device camera. Position the barcode within the designated scan area. The system will automatically detect and process the barcode.

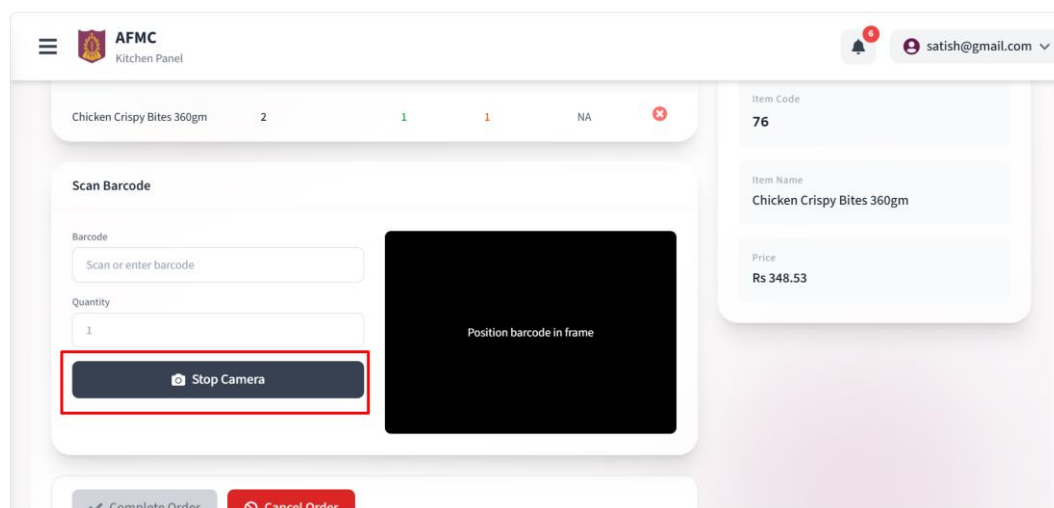

Figure 137: Camera Barcode Scanning

If you attempt to scan a barcode that has already been processed for this order, a 'Duplicate Barcode Scan' warning will be displayed. Each barcode must be scanned the exact number of times corresponding to the ordered quantity.

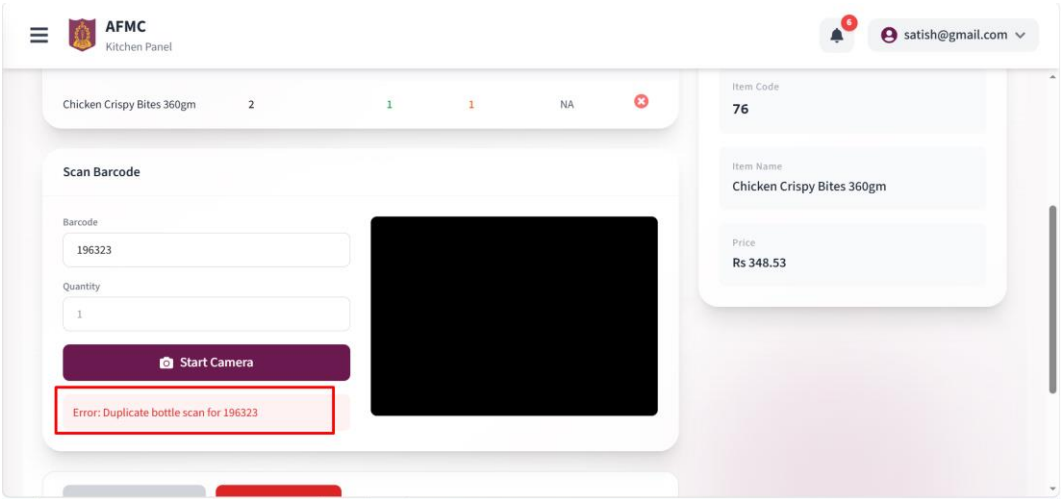

Figure 138: Duplicate Barcode Scan Alert

The scanned quantity and remaining quantity are displayed in real time. Continue scanning until all items in the order have been verified.

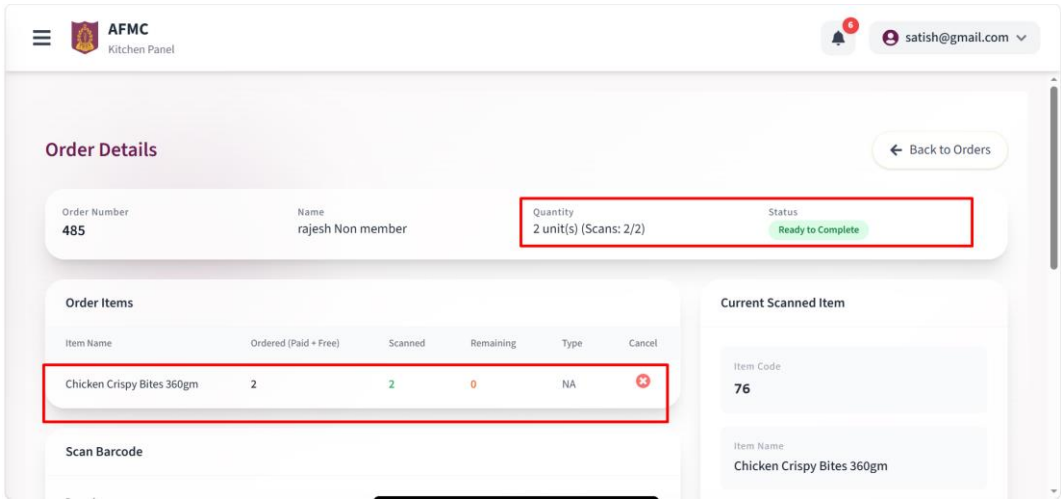

Figure 139: Barcode Scan Progress

7.2.4 Completing an Order

Once all items have been scanned and verified, the Complete Order button will become enabled. Click this button to finalize the order. A confirmation dialog will appear; click OK to confirm completion or Cancel to return to the order details.

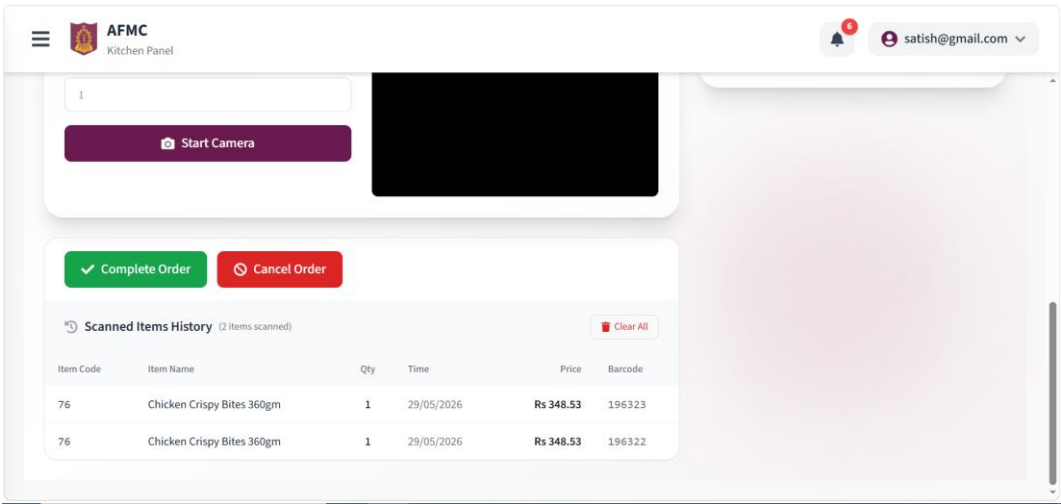

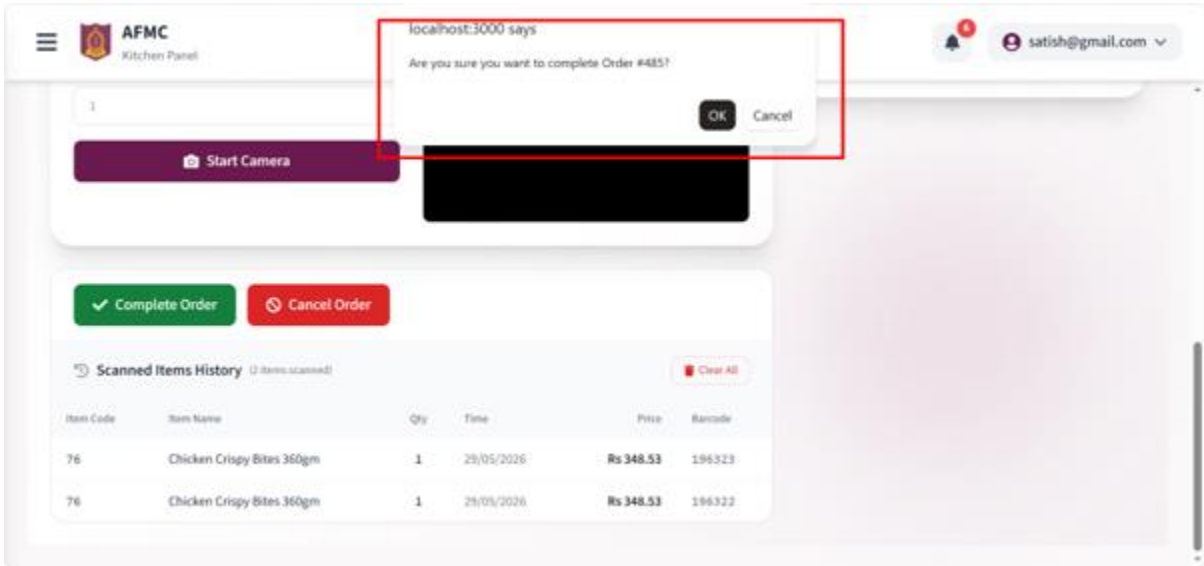

Figure 140: Complete Order Button Enabled

After completion, the order status will be updated to 'Completed' and the order will move to the order history. The user will be notified that their order is ready.

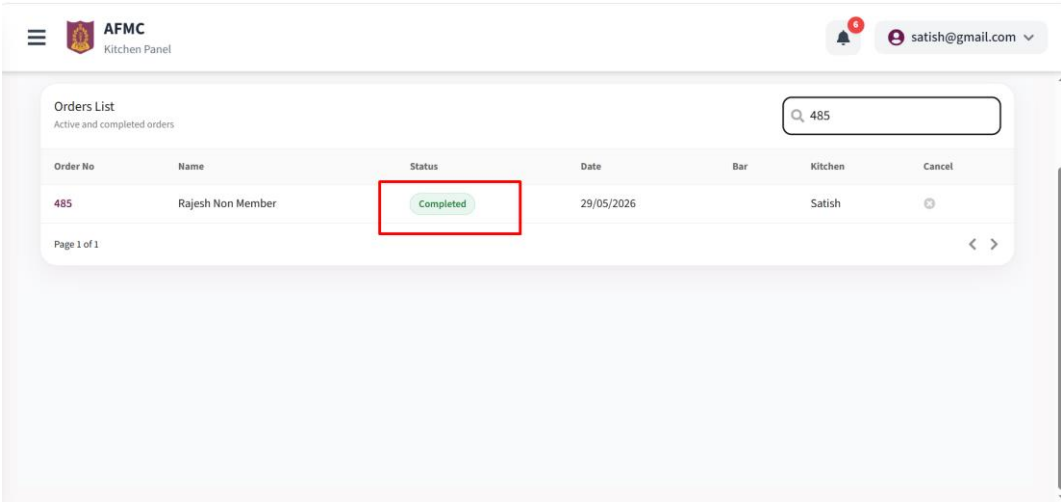

Figure 141: Completed Order Status

7.2.5 Clearing Scanned Items

If you need to restart the scanning process, click the Clear All button. A confirmation dialog will appear; click OK to clear all scanned items from the current order. This action resets the scan progress and allows you to start over.

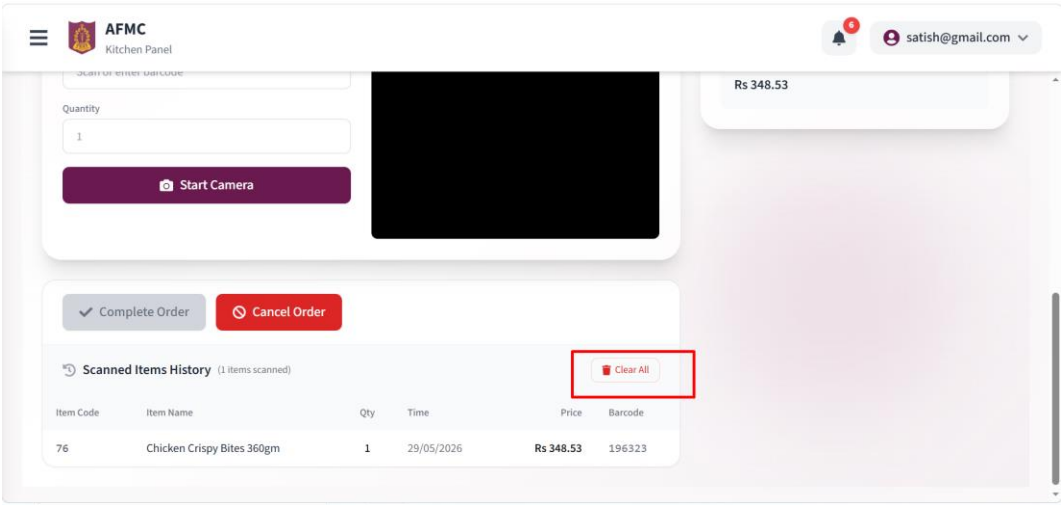

Figure 142: Clear All Scanned Items

7.3 Bar Kitchen (Drink Orders)

The Bar Kitchen interface follows the same workflow as the Mess Kitchen but is specialized for beverage orders. After selecting Bar Kitchen at login, the orders screen displays all pending drink orders.

Bar orders may include standard drinks, cocktails, and mocktails. Cocktail and mocktail orders are highlighted in blue to indicate that they require ingredient verification in addition to standard order processing.

7.3.1 Processing Cocktail Orders

For cocktail and mocktail orders, click on the order number to view the detailed ingredient list. A popup window will display all ingredients with their specified quantities. Verify each ingredient and scan the corresponding barcodes to confirm preparation.

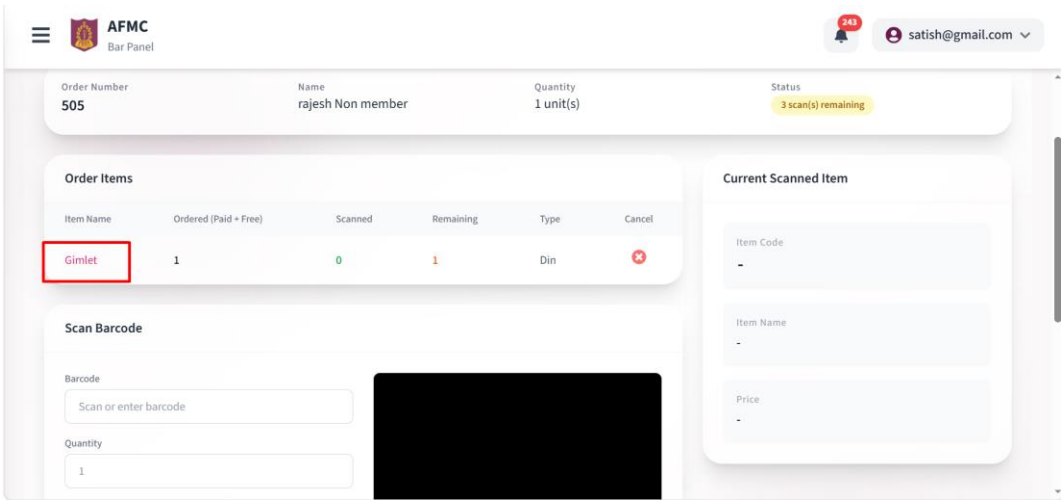

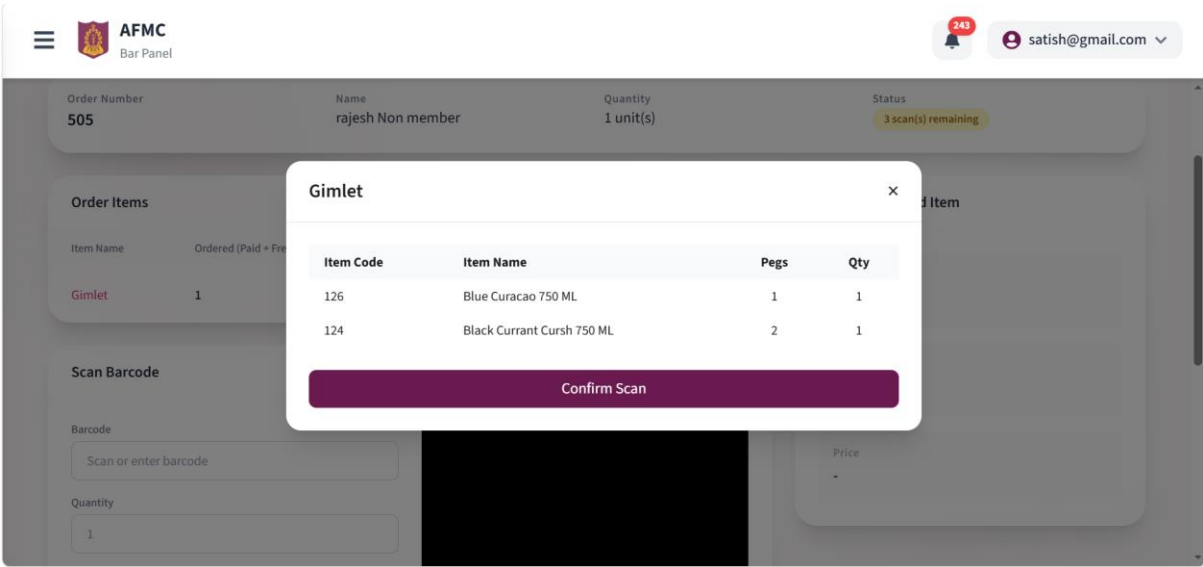

Figure 143: Cocktail Order with Ingredient Details

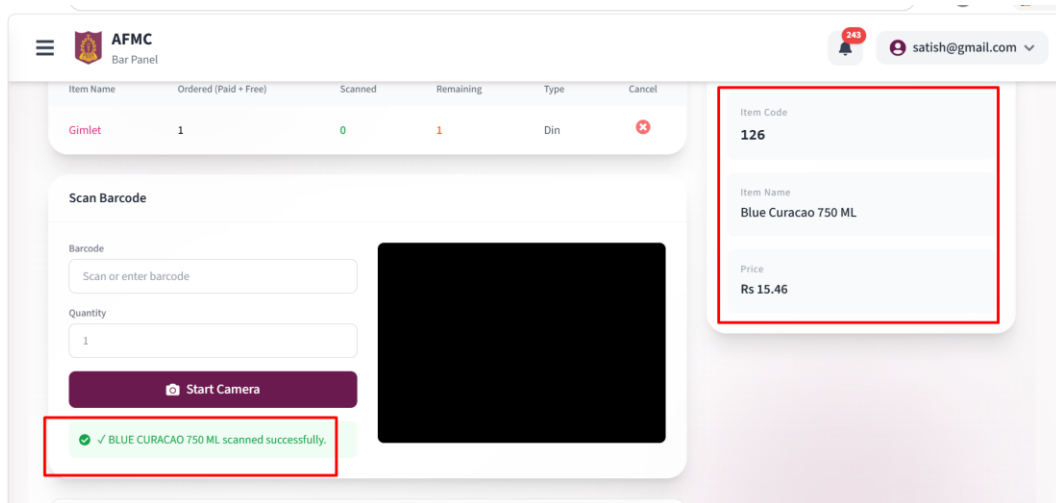

Figure 144: Scanning Cocktail Ingredients

The number of scans required corresponds to the quantity ordered multiplied by the pegs per ingredient. For example, if 2 quantities are ordered with 2 pegs each, scan the barcode 4 times total.

7.4 Order Processing & Completion

The order processing workflow follows a standardized sequence across both kitchen types:

1. Order Received: New orders appear with 'Received' status
2. Order Opened: Click order number to view details; status changes to 'Preparing'
3. Item Verification: Scan barcodes or manually verify each item
4. Order Completed: Click Complete Order after all items verified
5. User Notification: Customer is notified that order is ready

The system enforces quantity accuracy by requiring the exact number of barcode scans matching the ordered quantity. The Complete Order button remains disabled until all items are fully verified.

7.5 Order Cancellation

Kitchen staff have the ability to cancel orders that are in 'Received' status. Once an order status has been updated to 'Preparing', it can no longer be cancelled from the kitchen interface.

To cancel a received order, click the red cancel icon next to the order. A confirmation dialog will appear asking if you are sure you want to cancel. Click OK to proceed with cancellation, or Cancel to retain the order.

Order No	Name	Status	Date	Bar	Kitchen	Cancel
494	Krishana	Received	29/05/2026			
492	Rajesh Non Member	Received	29/05/2026			
8040	Naveen Member	Preparing	19/05/2026		Satish	
8023	Naveen Member	Preparing	19/05/2026		Satish	
7947	Naveen Member	Preparing	12/05/2026		Satish	
7818	Krishana	Preparing	30/05/2026		Satish	
7814	Krishana	Preparing	02/03/2026		Satish	
7795	Naveen Member	Preparing	21/03/2026		Satish	

Figure 145: Order Cancel Option

localhost:3000 says
Are you sure you want to cancel Order #492? This action cannot be undone.

Order No	Name	Status	Date	Bar	Kitchen	Cancel
494	Krishana	Received	29/05/2026			
492	Rajesh Non Member	Received	29/05/2026			
8040	Naveen Member	Preparing	19/05/2026		Satish	
8023	Naveen Member	Preparing	19/05/2026		Satish	
7947	Naveen Member	Preparing	12/05/2026		Satish	
7818	Krishana	Preparing	30/05/2026		Satish	
7814	Krishana	Preparing	02/03/2026	Cancel order	Satish	
7795	Naveen Member	Preparing	21/03/2026		Satish	

Figure 146: Cancellation Confirmation Dialog

Cancelled orders will no longer appear in the active orders list. They are moved to the Cancelled Orders report, which can be accessed from the Order History section for audit purposes.

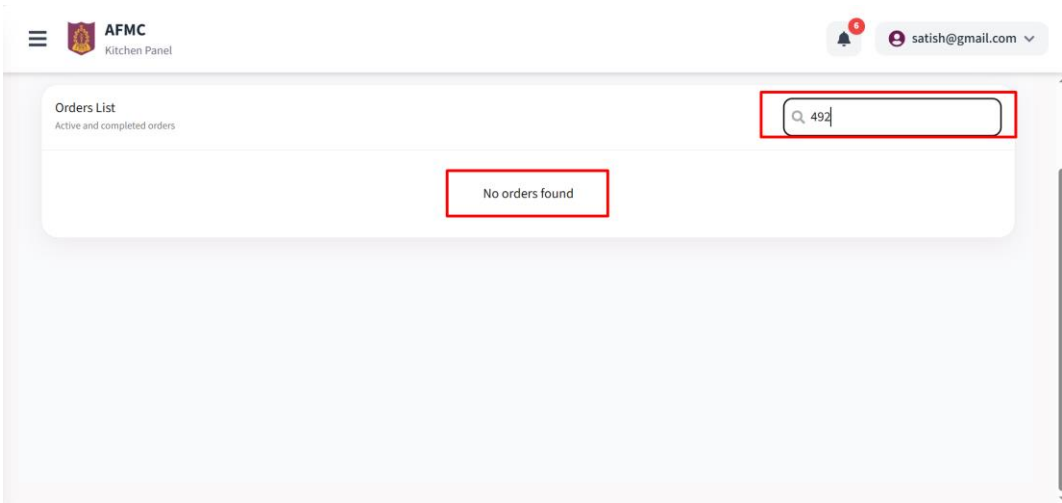

Figure 147: Cancelled Orders in History

7.5.1 Cancelling Individual Items

Kitchen staff can also cancel individual items within an order if those items are out of stock or cannot be prepared. Click the cancel button next to the specific item to remove it from the order. The remaining items in the order will still be processed normally.

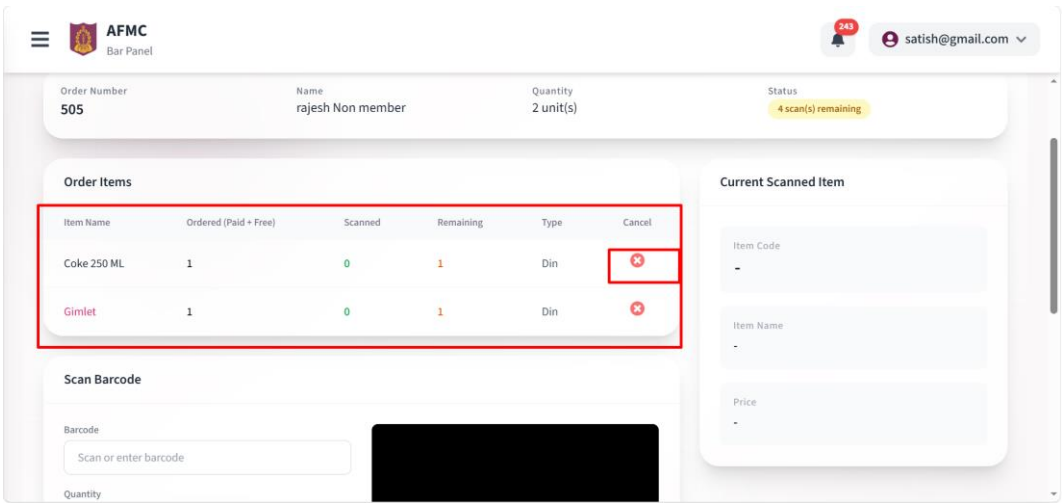

Figure 148: Cancelling Individual Order Items

7.6 Order History & Reports

The Order History section provides access to all completed orders for review, analysis, and reporting purposes. Navigate to Order History from the kitchen sidebar menu.

7.6.1 Viewing Order History

The order history listing displays all completed orders with details including order number, date, customer name, item summary, and total amount. By default, today's completed orders are shown.

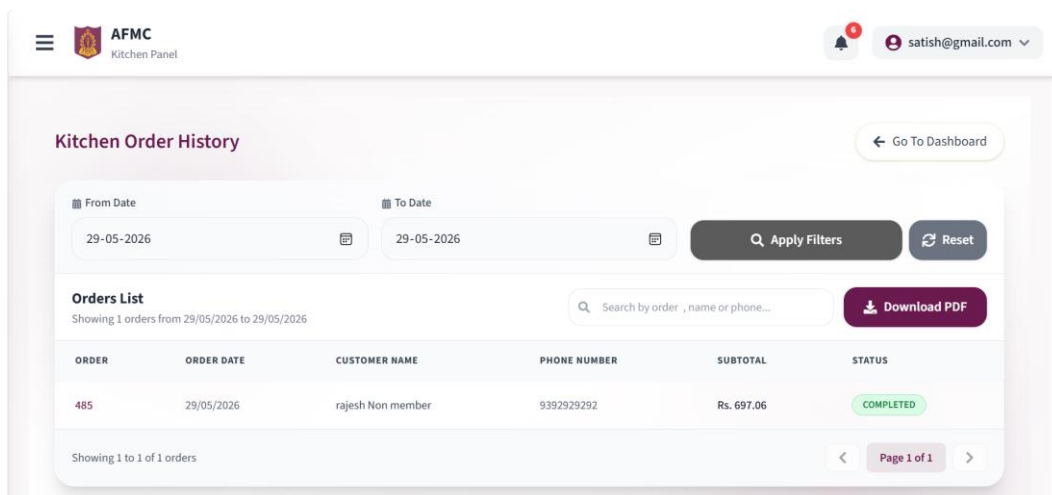

Figure 149: Kitchen Order History

7.6.2 Date Filtering

Use the date filter to view orders within a specific date range. Set the From and To dates, then click Apply Filter to refresh the listing. Click Reset to clear the date filters and return to the default view.

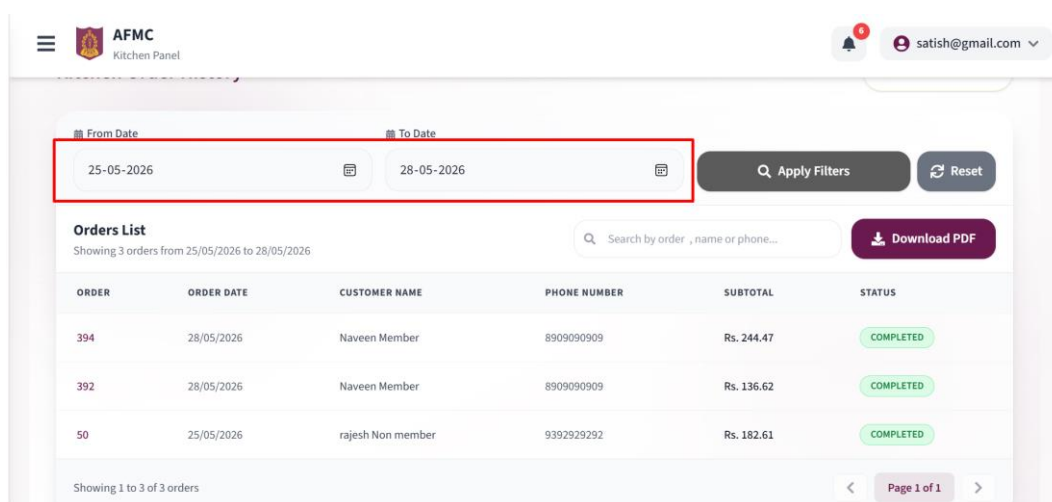

Figure 150 Filtering Orders by Date Range

7.6.3 Search Functionality

Search for specific orders by order number, customer name, or phone number. Enter the search term and click Search to filter the results. Click Reset to clear the search and display all records.

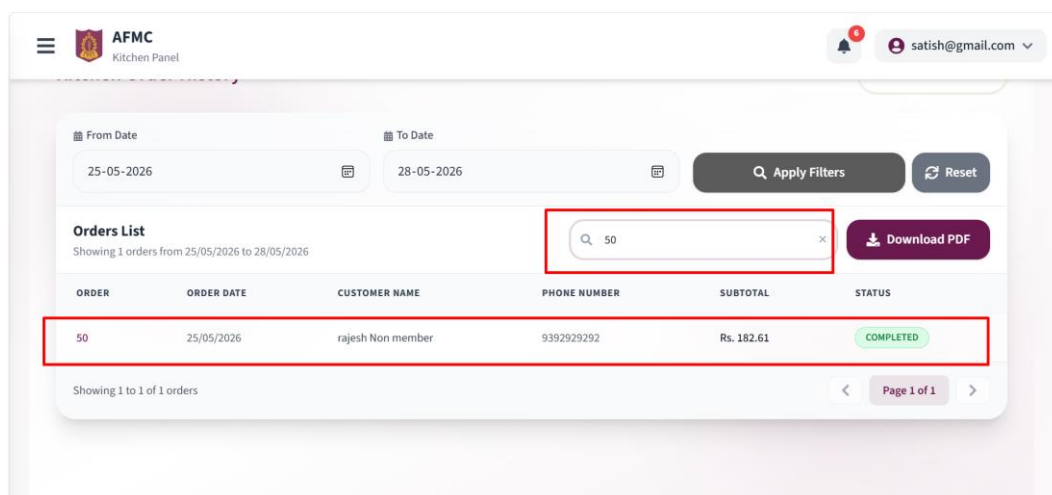

Figure 151: Searching Order History

7.6.4 Downloading Reports

The filtered order history can be downloaded as a PDF report for record-keeping. Apply the desired filters, then click the Download button to generate and save the PDF file. The downloaded file will appear in your browser's downloads folder.

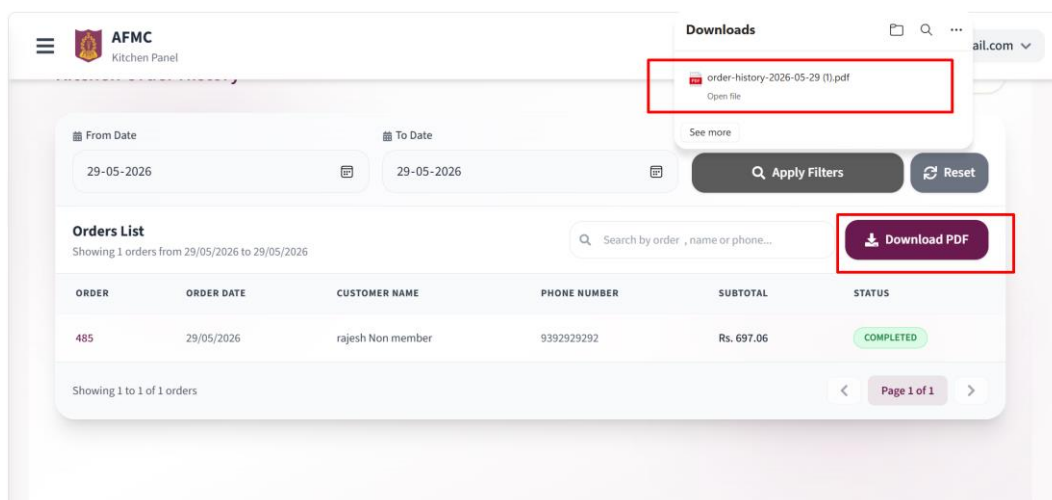

Figure 152: Downloading Order History Report

7.6.5 Cancelled Order History

A separate Cancelled Order History view is available to review all cancelled orders. This includes orders cancelled by both kitchen staff and users. Filter by date range and download reports in PDF format as needed.

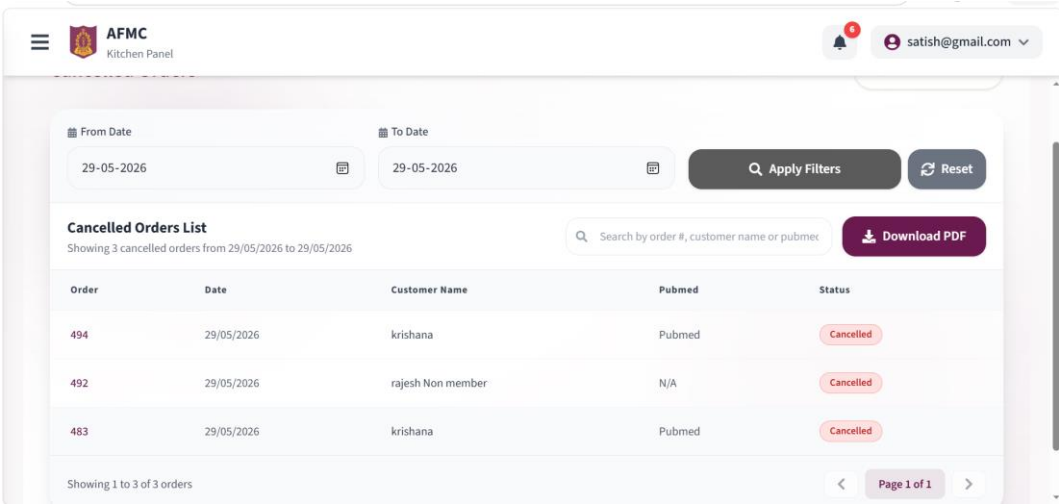

Figure 153: Cancelled Orders History

8. Storekeeper Flow

The Storekeeper Flow covers all inventory management activities performed by storekeeping personnel. Storekeepers are responsible for monitoring stock levels, receiving alerts for low or depleted inventory, and updating stock quantities to ensure uninterrupted mess operations.

8.1 Stock Alerts

The system provides real-time stock alert notifications to keep storekeepers informed about inventory status. When any item reaches zero stock or falls below the configured threshold, an alert is generated and visible through the notification system.

Click on the alert/notification icon to view a popup window displaying all items that are currently out of stock or running low. The alert shows the item name, current quantity, and category for quick identification.

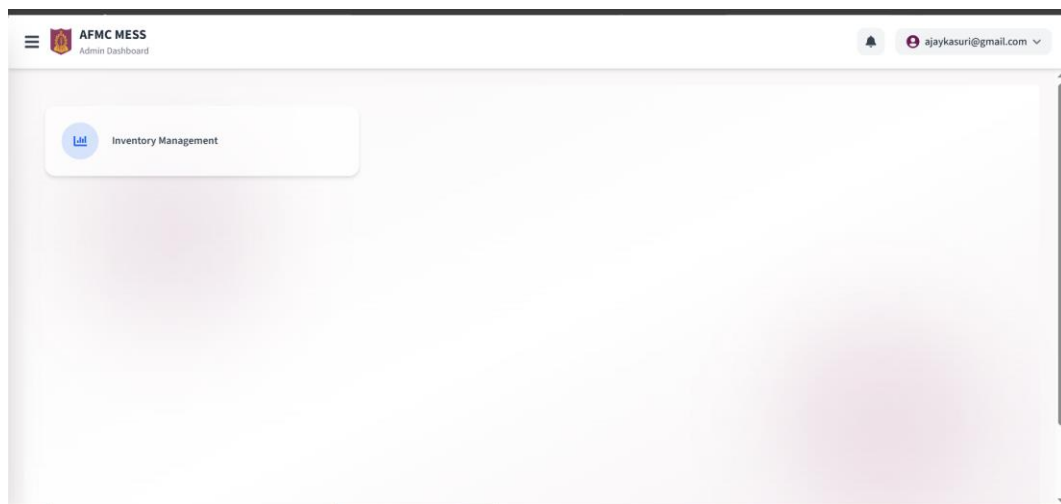

Figure 154: Stock Alert Notification

Click on any item name in the alert popup to navigate directly to the inventory report page for that item. This provides detailed quantity information and transaction history to help determine the appropriate reorder quantity.

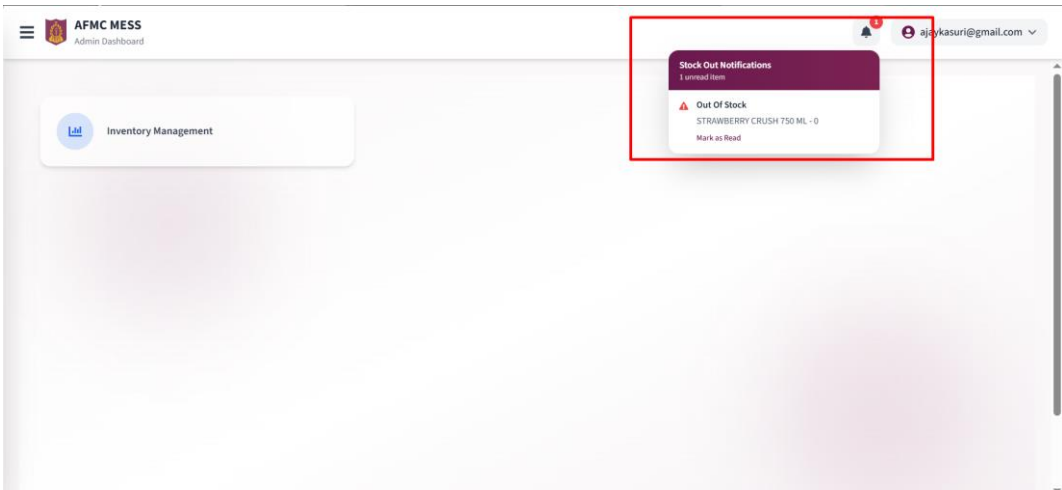

Figure 155: Stock Alert Item Details

8.2 Inventory Management

Storekeepers can access the Inventory Management module to view current stock levels for all items. The inventory listing displays each item's name, category, current stock quantity, price, and preparation charge status. This comprehensive view enables quick assessment of overall inventory health.

When items are first created by administrators, they are initialized with zero stock. It is the storekeeper's responsibility to add stock through the Add Stock workflow described in the following section.

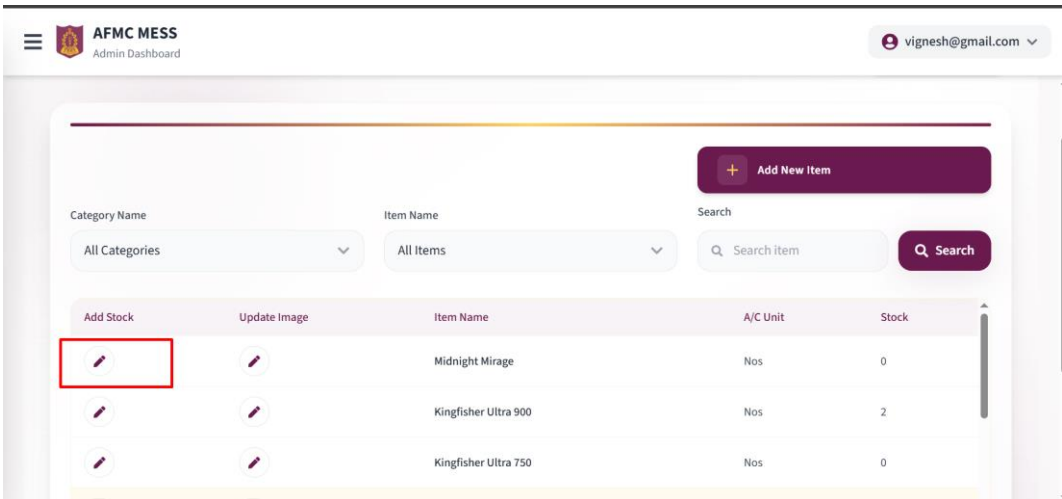

Figure 156: Inventory Management Overview

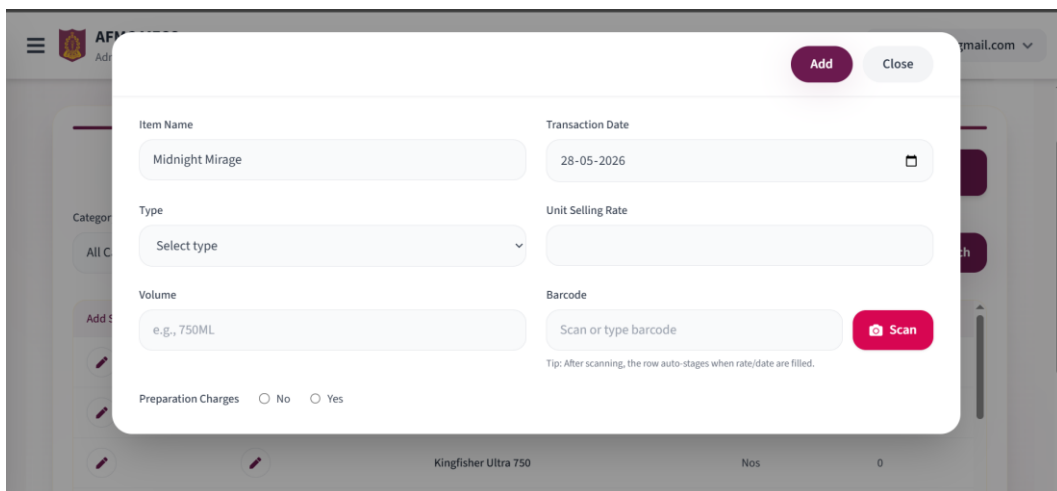

8.3 Adding Stock

The Add Stock module is the primary tool for storekeepers to update inventory quantities. Navigate to the Add Stock option from the sidebar menu to access the stock addition interface.

8.3.1 Stock Addition Form

The Add Stock screen provides a form for entering stock details. For each item being added, the following information is required:

29. Item Selection: Enter the item's barcode or scan it using the barcode scanner
30. Purchase Type: Select Free (no cost) or Purchase (with cost)
31. Item Price: Enter the unit purchase price (for purchase type)
32. Unit Selling Rate: Enter the selling price per unit
33. Volume: Specify the quantity being added
34. Barcode: Assign or confirm the unique barcode for the item

The screenshot displays the 'Add Stock' form within the AFMC Mess Application. The form is a white modal box with rounded corners, featuring several input fields and buttons. At the top right of the modal are 'Add' and 'Close' buttons. The fields include:

- Item Name:** A text input field containing 'Midnight Mirage'.
- Transaction Date:** A date input field showing '28-05-2026' with a calendar icon.
- Type:** A dropdown menu with 'Select type' as the current selection.
- Unit Selling Rate:** A text input field.
- Volume:** A text input field with the placeholder 'e.g., 750ML'.
- Barcode:** A text input field with the placeholder 'Scan or type barcode' and a red 'Scan' button with a camera icon.
- Preparation Charges:** Radio buttons for 'No' and 'Yes'.

Below the barcode field, a small tip reads: 'Tip: After scanning, the row auto-stages when rate/date are filled.' The background shows a blurred view of the application's main interface, including a sidebar with a menu icon and a list of items with columns for item name, volume, and quantity.

Figure 157: Add Stock Interface

The barcode can be entered manually by typing the barcode number, or automatically by scanning the physical barcode using a connected scanner device. The system validates the barcode to ensure it corresponds to an existing inventory item.

The screenshot shows a mobile application interface with a modal dialog box titled 'Barcode Entry Methods'. The dialog has two tabs: 'Add' (selected) and 'Close'. It contains the following fields and options:

- Item Name:** Text input field containing 'Midnight Mirage'.
- Transaction Date:** Text input field containing '28-05-2026' with a calendar icon.
- Type:** A dropdown menu with 'Select type' as the placeholder. A red box highlights the dropdown, and a secondary red box highlights the expanded list containing 'Free' and 'Purchased'.
- Unit Selling Rate:** Text input field.
- Barcode:** Text input field with the placeholder 'Scan or type barcode'. A red box highlights this field, and a 'Scan' button with a camera icon is to its right.
- Preparation Charges:** Radio button options: 'No' (selected) and 'Yes'.

At the bottom of the dialog, there is a tip: 'Tip: After scanning, the row auto-stages when rate/date are filled.' Below the dialog, a table is partially visible with the header 'Kingfisher Ultra 750' and columns for 'Nos' and a numerical value '0'.

Figure 158: Barcode Entry Methods

If applicable, preparation charges can be specified in the designated field. When items have associated preparation charges, these will be factored into the final selling price calculation.

The screenshot shows the same 'Barcode Entry Methods' dialog box, but with different data entered and a red box highlighting the 'Barcode' field. The fields are now:

- Item Name:** 'Midnight Mirage'.
- Transaction Date:** '28-05-2026'.
- Type:** 'Purchased'.
- Unit Selling Rate:** '190'.
- Volume:** '650'.
- Barcode:** 'Scan or type barcode' (highlighted with a red box). The 'Scan' button is to its right.
- Preparation Charges:** 'No' (selected with a blue dot).

The same tip is present at the bottom: 'Tip: After scanning, the row auto-stages when rate/date are filled.' The table at the bottom remains the same.

Figure 159: Preparation Charges Field

8.3.2 Staging and Confirming Stock

After filling in the item details, click the Add button to stage the item in the summary table below. Multiple items can be added to the staging table before final submission. Review all entries carefully before proceeding.

Item Name: Midnight Mirage

Transaction Date: 28-05-2026

Type: Purchased

Unit Selling Rate: 190

Volume: 650

Barcode: 994956

Preparation Charges: ☒ No ☐ Yes

Buttons: Add, Close, Scan

Figure 160: Staged Items in Summary Table

If an item was added incorrectly, click the Delete button next to that item in the staging table to remove it. After verifying all staged items are correct, click the Add Stock button to finalize the stock update.

Buttons: Add, Close, Scan

Preparation Charges: ☒ No ☐ Yes

Buttons: Cancel, Add Stock

Item Name	Quantity	Barcode	Batchname	Rate	Transaction Date	Volume	Delete
Midnight Mirage	1	994956	Midnight Mirage-1-650-5/28/2026	190	5/28/2026	650	

Figure 161: Confirming Stock Addition

Upon successful stock addition, the system will update the inventory records and redirect you to the Inventory Management page. The updated stock quantities will be immediately reflected in the item listing.

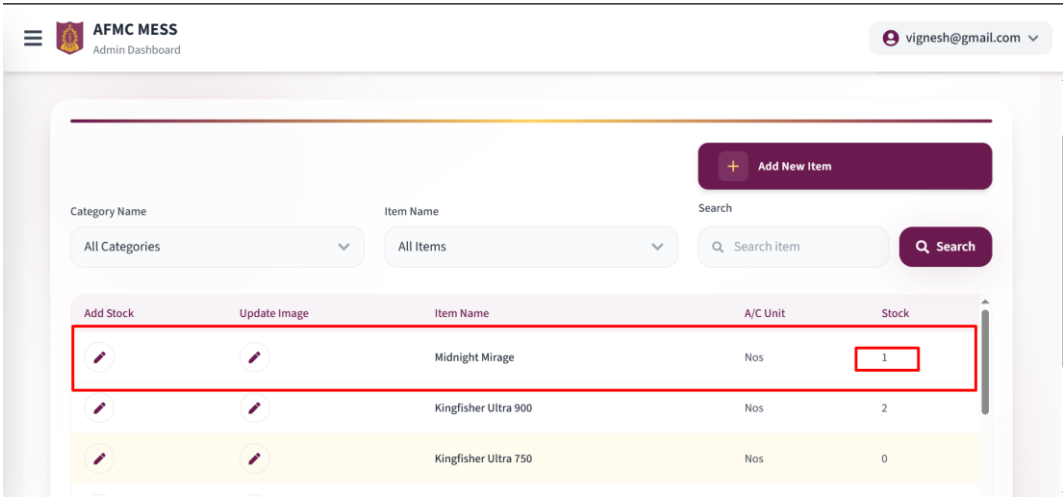

Figure 162: Updated Inventory with New Stock

After stock has been added, the items become available for end users to order. The out-of-stock indicators on the user menu will be removed, and the items will appear as active and selectable.

9. Order Attendant Flow

The Order Attendant is responsible for creating and managing customer orders within the system. This section describes the complete workflow, including logging in, browsing available menu items, creating orders, modifying order details, processing payments, and monitoring order status until the order is completed.

9.1 Login & Dashboard

Order attendant access the AFMC Mess Application using the same login URL as administrators. Enter your username and password on the login screen and click Sign In. Upon successful authentication, you will be redirected to your personal registration page.

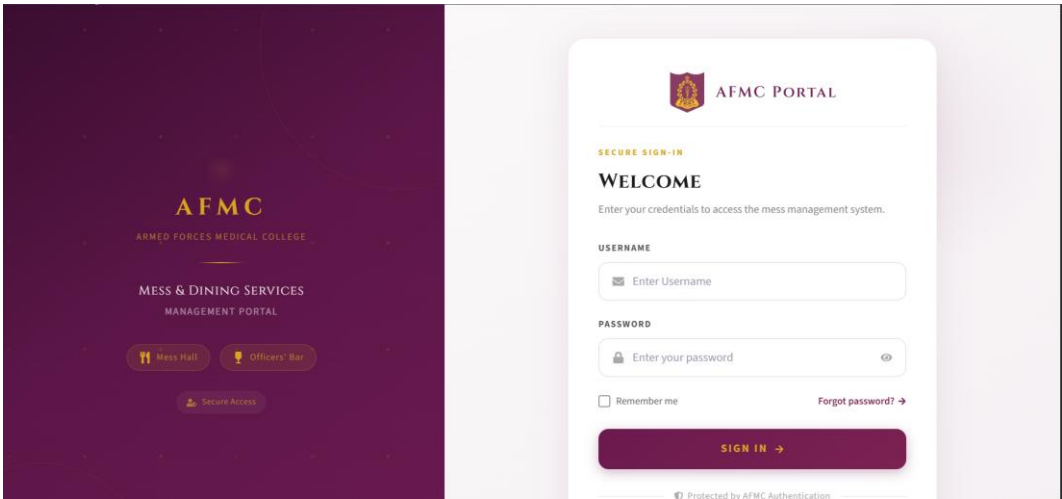

Figure 163: Order Attendant Login Screen

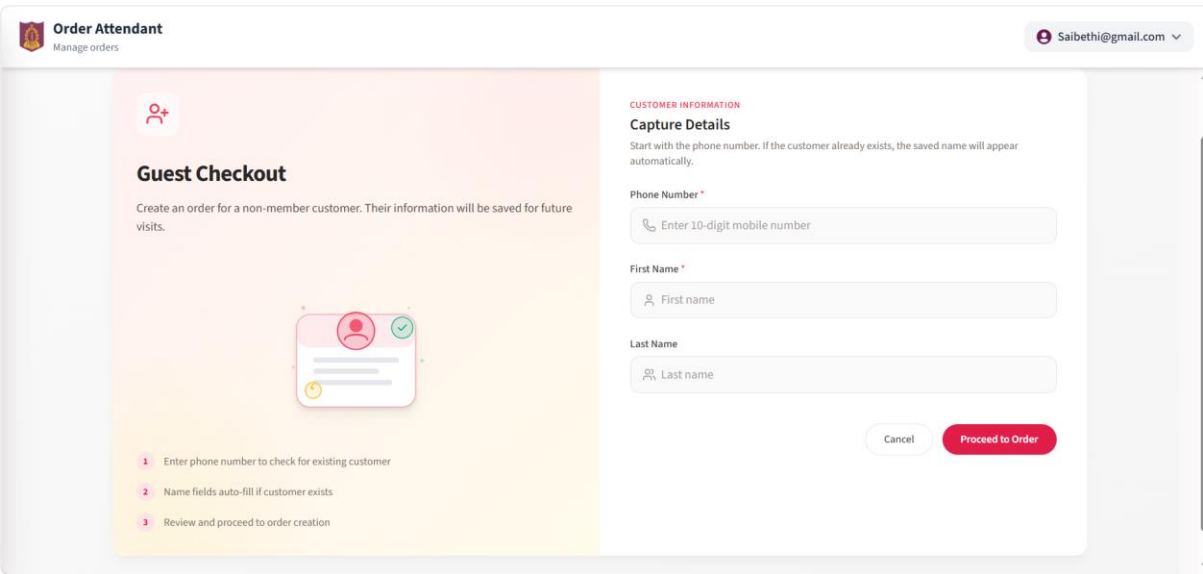

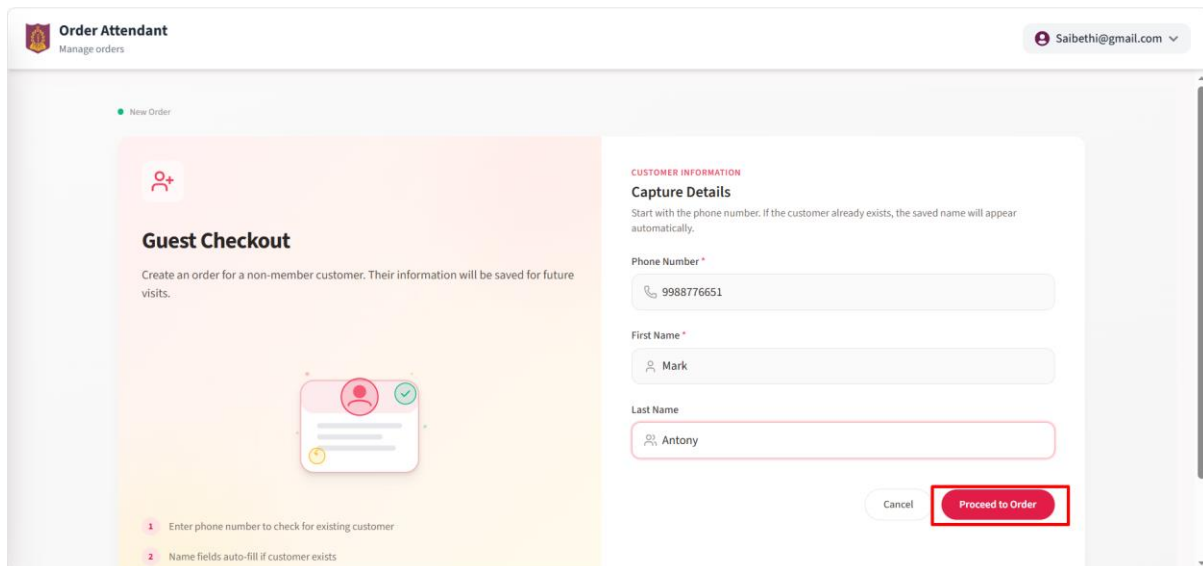

Figure 164: Order Attendant Register Screen

9.2 Register New user

Enter the customer's Mobile Number, First Name, and Last Name in the respective fields and verify that the information entered is correct. Once the required details have been provided, click the Proceed to Order button. The system will validate the customer information and navigate you to the Menu Dashboard, where you can browse the available menu categories and select items to create the customer's order.

The screenshot shows the 'Order Attendant' interface with a 'Guest Checkout' section on the left and a 'CUSTOMER INFORMATION' section on the right. The 'Guest Checkout' section includes a heading, a description, and a list of instructions. The 'CUSTOMER INFORMATION' section has a 'Capture Details' heading and three input fields for 'Phone Number', 'First Name', and 'Last Name'. A 'Proceed to Order' button is highlighted with a red box.

Figure 167: Register Screen for Existing User.

9.3 Menu Browsing

The menu dashboard displays all available food and beverage items organized by category. At the top of the screen, scrolling banners showcase current promotional offers. The main menu area is divided into two primary categories:

0. Drinks: Including soft drinks and hard drinks (beer, brandy, whisky, rum, cocktails, mocktails)
1. Snacks: Including vegetarian and non-vegetarian food items

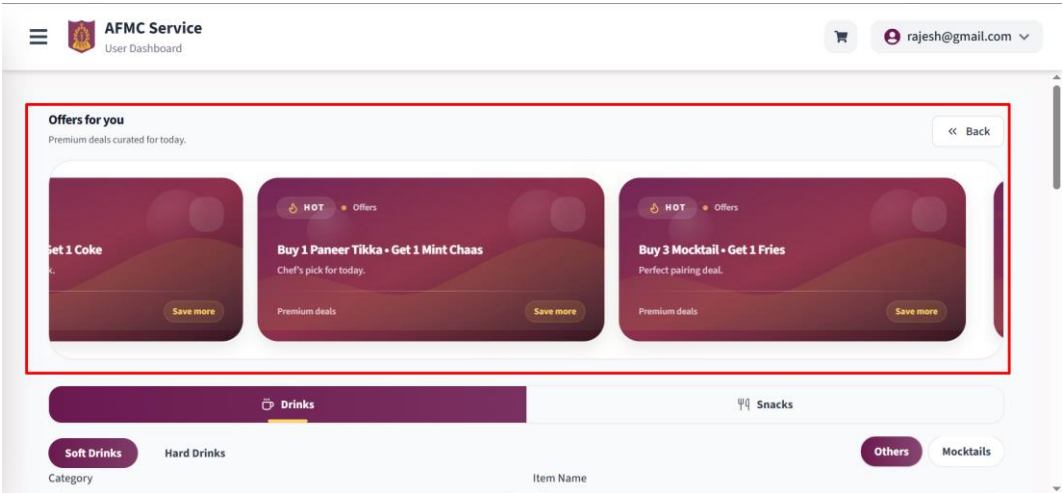

Figure 168: Menu Dashboard with Offers and Categories

Each main category contains sub-categories for refined browsing. Use the sub-category dropdown filters to narrow down the displayed items. For drinks, filter by soft drinks, hard drinks, or specific beverage types. For snacks, filter by vegetarian or non-vegetarian options.

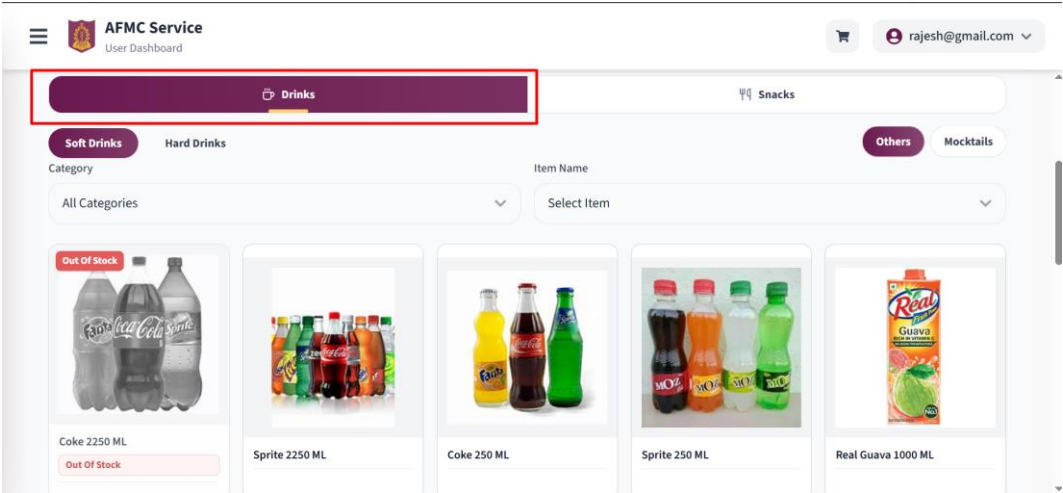

Figure 169: Category and Sub-category Filters

Items that are out of stock will display a faded appearance with an 'Out of Stock' overlay, and cannot be selected for ordering. This visual indicator helps users quickly identify available items.

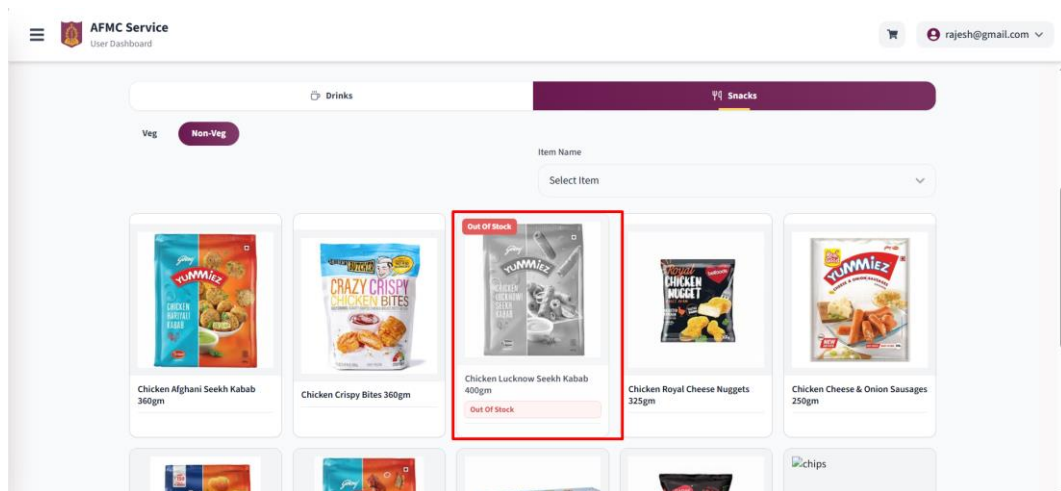

Figure 170: Out of Stock Item Indicator

9.4 Drinks Ordering Flow

The drinks ordering flow allows users to browse beverage categories, select items, and add them to the cart. This section covers the standard ordering process for all drink items except cocktails and mocktails (which are covered separately).

9.4.1 Selecting a Category

From the menu dashboard, navigate to the Drinks section. Select the desired sub-category (e.g., Hard Drinks) from the dropdown filter. The menu will refresh to display only items matching the selected sub-category.

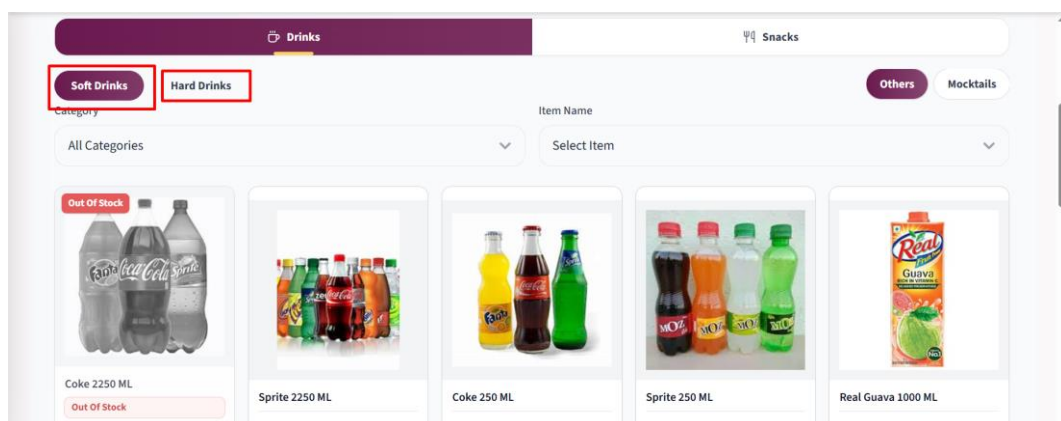

Figure 171: Drinks Category Selection

9.4.2 Filtering by Item Name

Use the Item Name dropdown to further filter the menu. Click the dropdown to view all available items in the selected sub-category, or type to search for a specific item. Select an item to filter the display to that specific product.

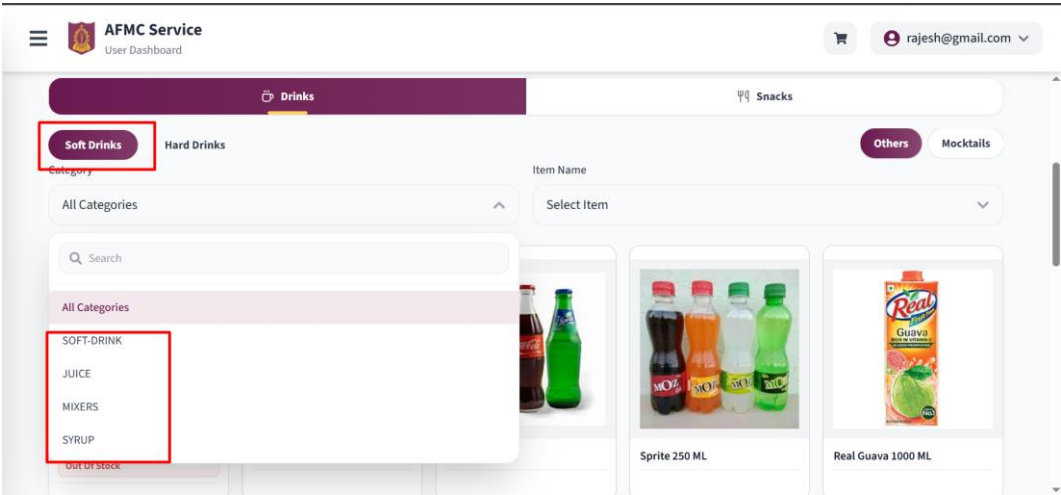

Figure 172: Filtering Items by Name

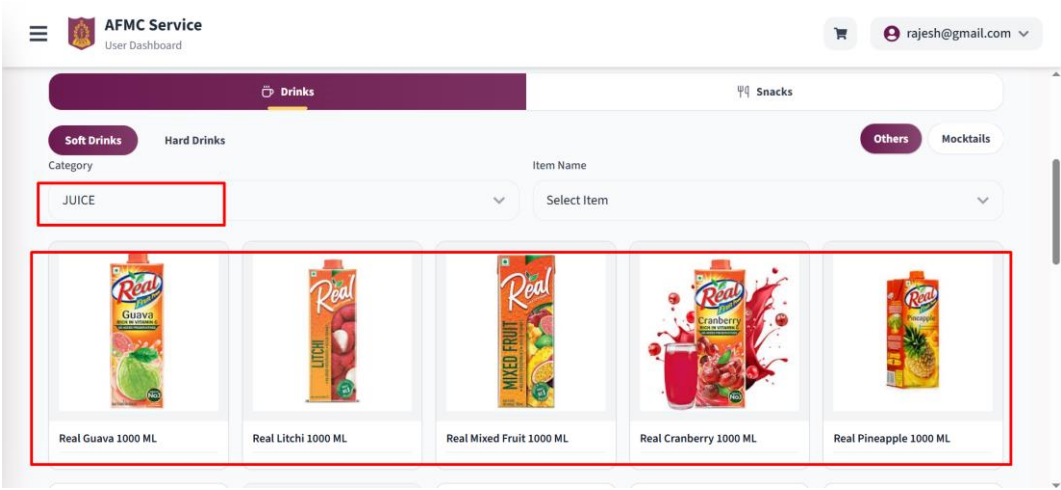

Figure 173: Filtered Menu Display

9.4.3 Adding to Cart

Click on any menu item to open the order dialog. Select the service type (Dine-In or Takeaway) from the Remarks dropdown. Enter the desired quantity and click Add to Cart. If the item has sufficient stock, a confirmation message will appear and the item will be added to your cart.

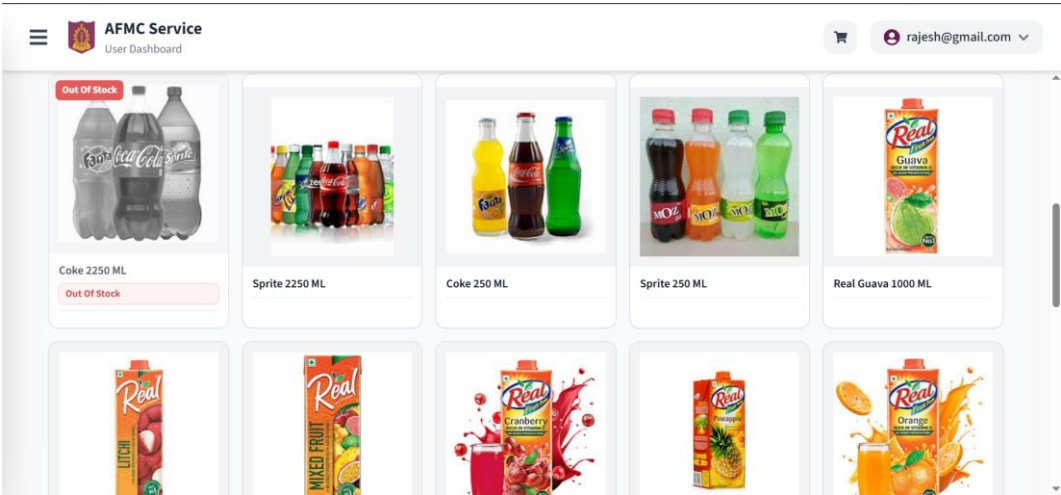

Figure 174: Item Order Dialog

If the requested quantity exceeds available stock, an 'Out of Stock' alert will be displayed. In this case, reduce the quantity or select a different item.

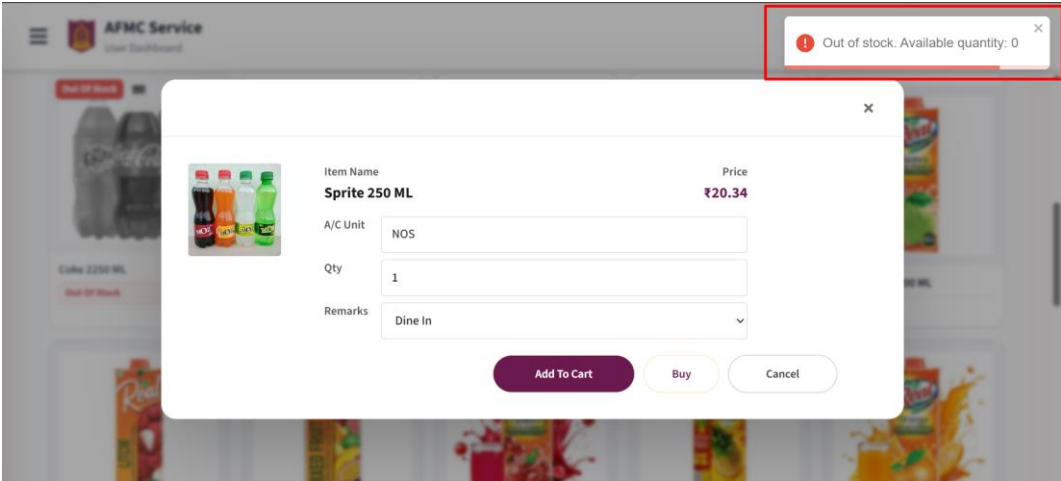

Figure 175: Out of Stock Alert

Upon successful addition, a toast notification will confirm the item has been added to the cart. The cart icon in the top navigation bar will update to show the current item count.

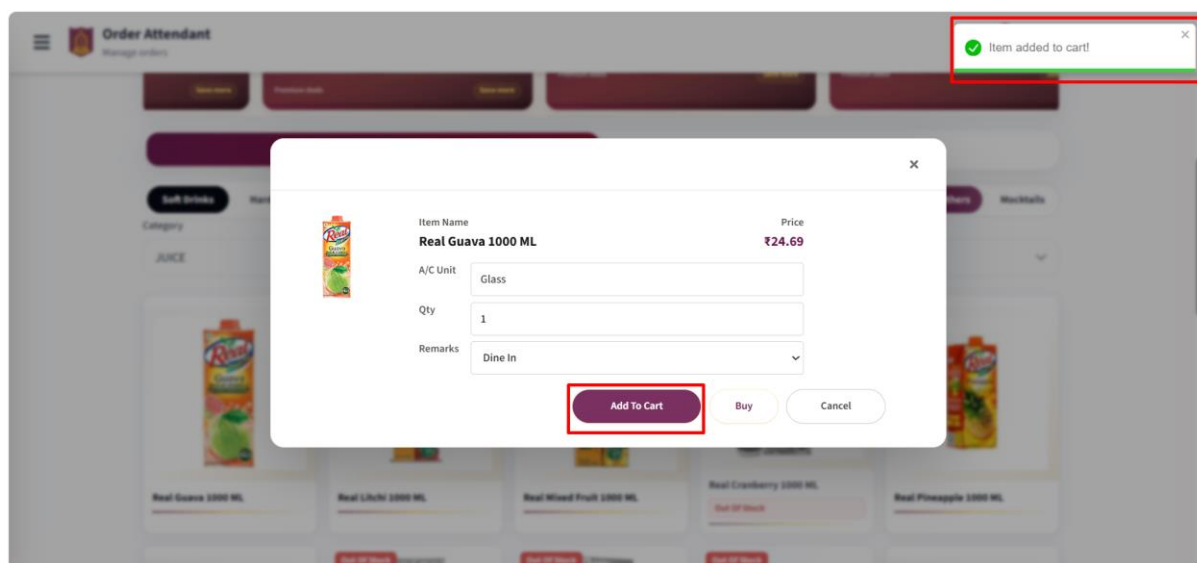

Figure 176: Cart Item Count Update

9.5 Snacks Ordering Flow

The snacks ordering flow follows the same pattern as drinks. Navigate to the Snacks section of the menu dashboard. The two sub-categories are Vegetarian (Veg) and Non-Vegetarian (Non-Veg).

Select the desired sub-category, then use the item name filter to locate specific items. Click on an item to open the order dialog, select the service type and quantity, then click Add to Cart.

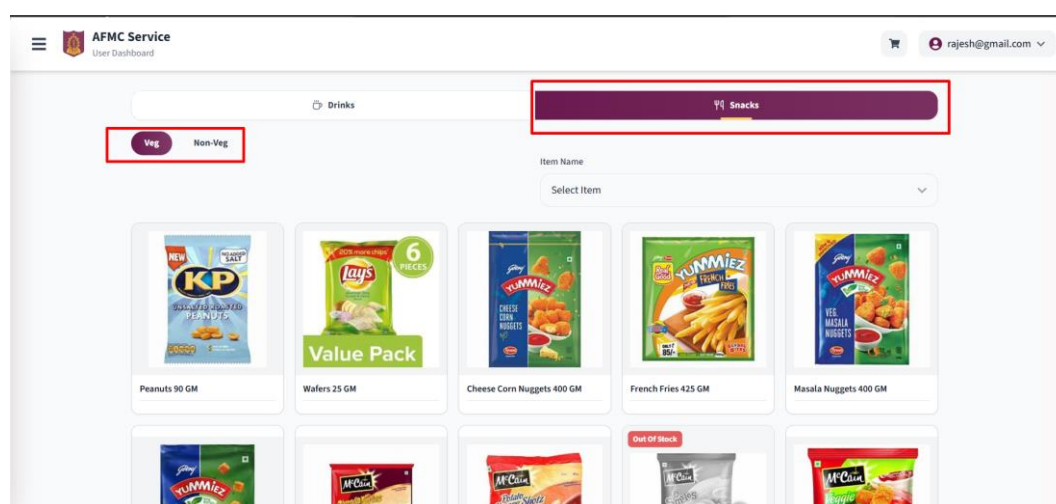

Figure 177: Snacks Menu with Sub-categories

The cart flow for snacks is identical to the drinks cart flow described in the following section. All cart operations including quantity adjustment, item deletion, and checkout apply uniformly across both categories.

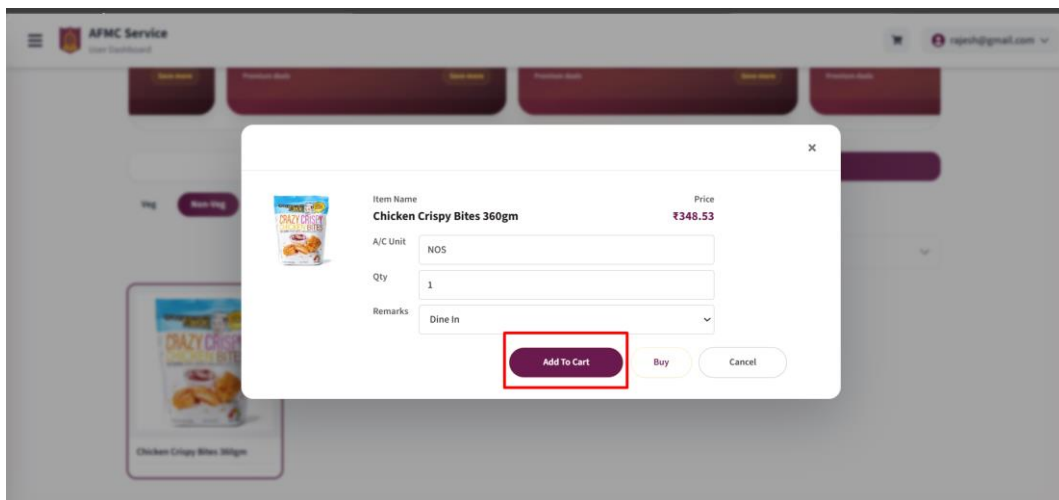

Figure 178: Snack Item Order Dialog

9.6 Cart Management

The cart management interface provides tools for reviewing and modifying your order before checkout. Click the cart icon in the top navigation bar to access the cart page.

9.6.1 Viewing Cart Contents

The cart page displays all items you have added, showing the item name, unit price, quantity, and subtotal for each entry. Review your selections carefully before proceeding to checkout.

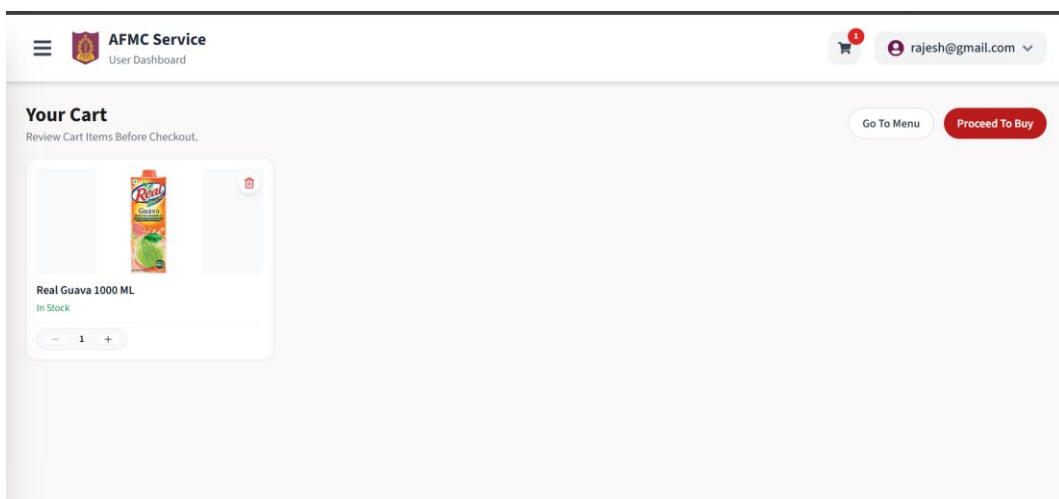

Figure 179: Cart Management Page

9.6.2 Adjusting Quantities

To change the quantity of an item, use the plus (+) and minus (-) buttons next to each cart entry. The subtotal will automatically recalculate, and a confirmation message will display when the quantity is updated.

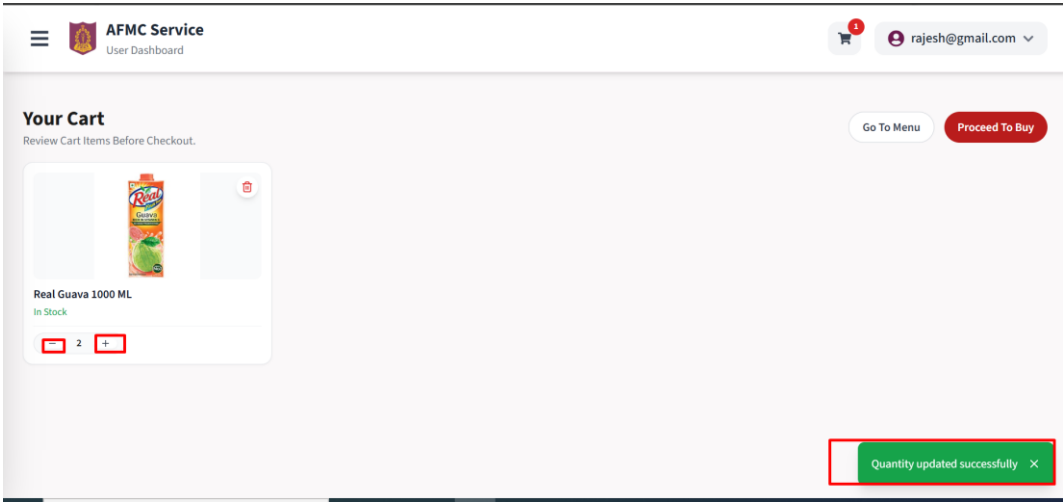

Figure 180: Adjusting Item Quantities in Cart

9.6.3 Deleting Cart Items

To remove an item from your cart, click the delete (trash) icon next to the item. The item will be immediately removed, and the cart total will be recalculated. If all items are removed, the cart will display an empty state message.

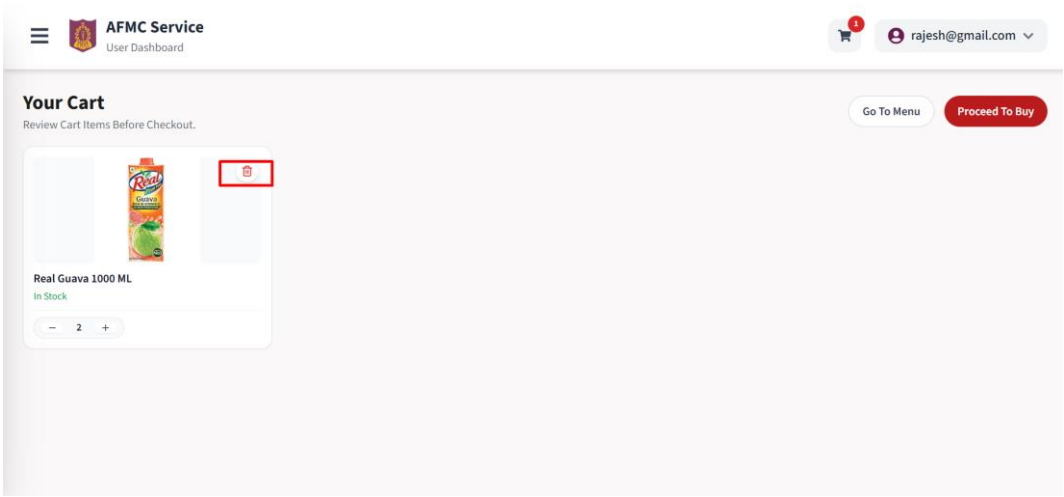

Figure 181: Deleting an Item from Cart

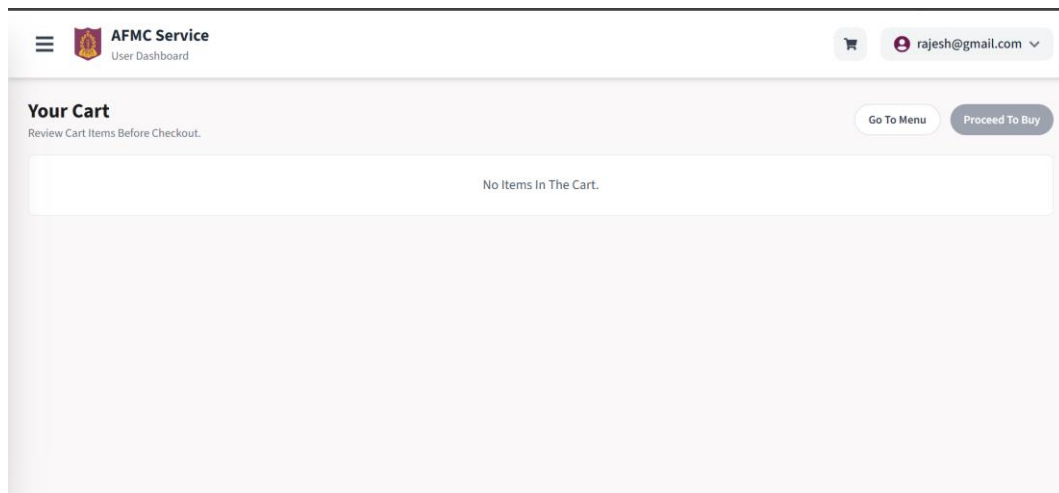

Figure 182: Empty Cart State

9.6.4 Proceeding to Checkout

When you are satisfied with your cart contents, click the Proceed to Buy button. A confirmation dialog will appear asking if you are sure you want to continue with the order. Click Yes to proceed to the order confirmation screen, or Cancel to return to the cart.

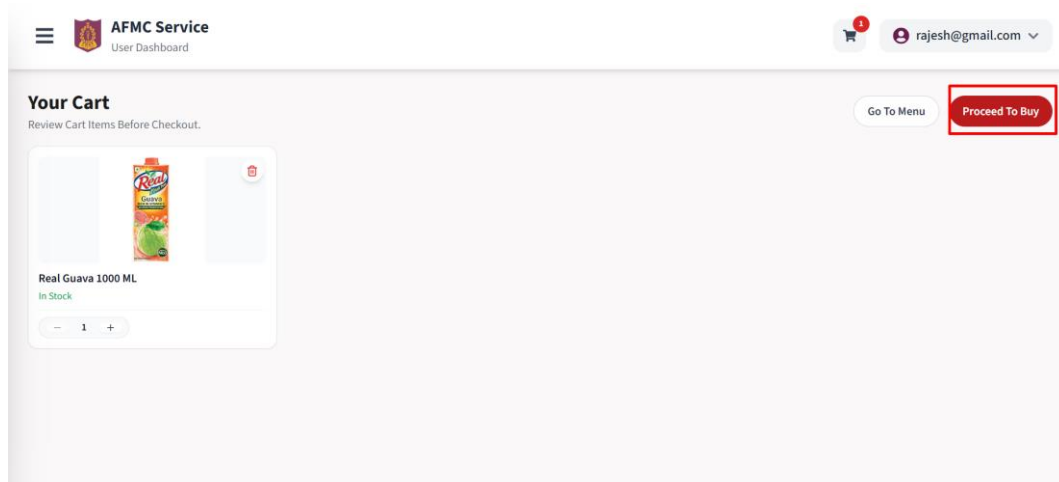

Figure 183: Proceed to Buy Confirmation

9.7 Cocktail / Mocktail Ordering

Ordering cocktails and mocktails follows a similar process to standard drinks but includes an additional ingredient customization step. This allows users to personalize their mixed drinks by adding or modifying ingredients.

9.7.1 Selecting a Cocktail/Mocktail

Navigate to the Drinks section and select the Hard Drinks sub-category. From the item type filter, select Cocktails to display available cocktail and mocktail items. Use the item name filter to locate a specific drink.

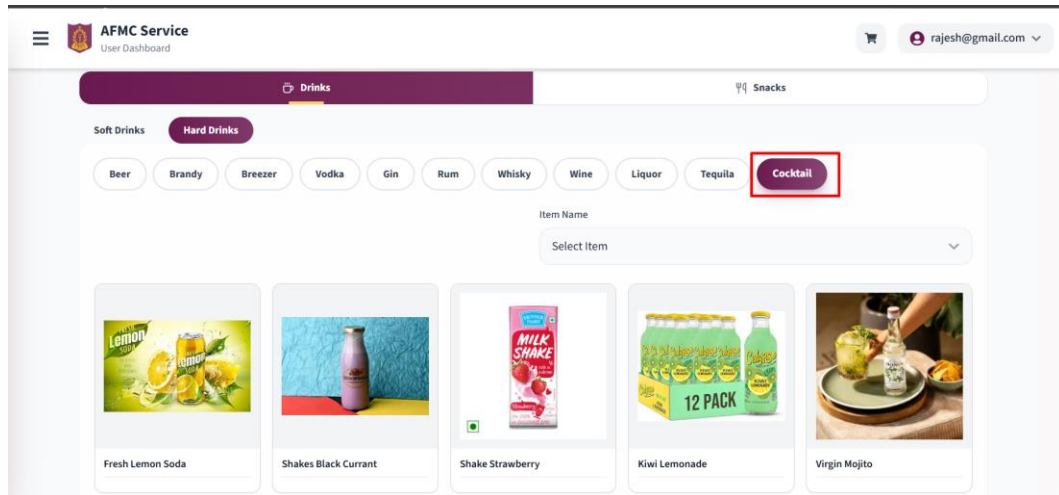

Figure 184: Selecting Cocktail Category

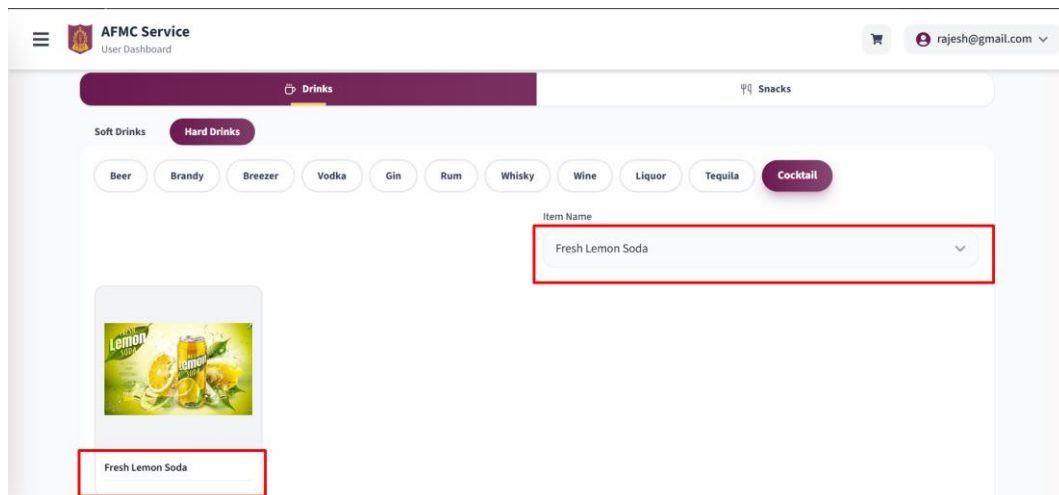

Figure 185: Cocktail/Mocktail Menu Display

9.7.2 Adding to Cart with Customization

Click on a cocktail item to open the order dialog. Select the service type and quantity, then click Add to Cart. After adding the item, navigate to the cart page.

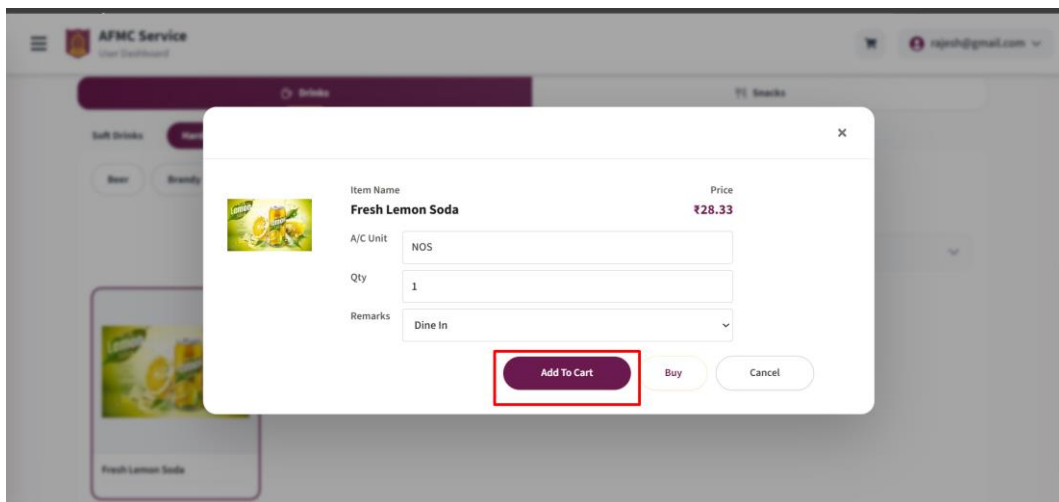

Figure 186: Cocktail Order Dialog

In the cart, cocktail and mocktail items display an edit (pencil) icon that allows ingredient customization. Click this icon to open the ingredient management interface.

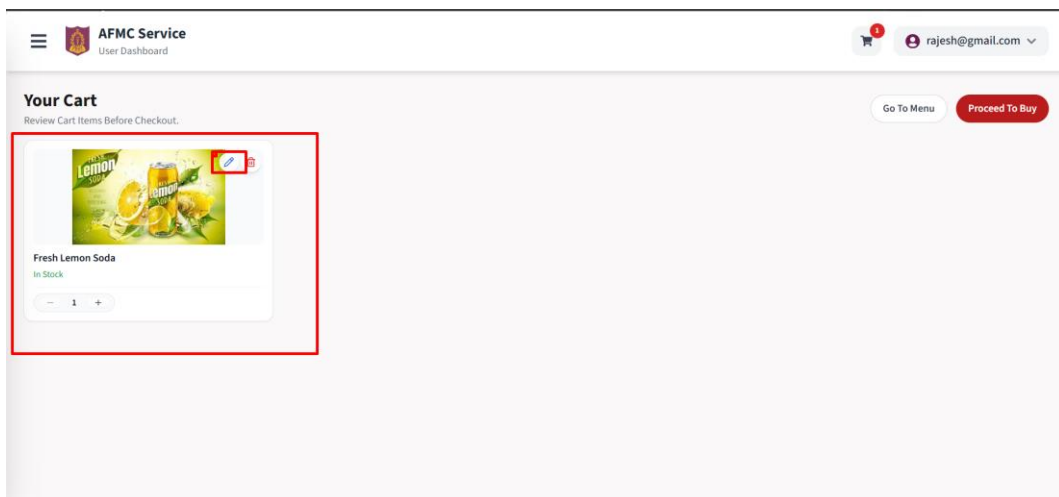

Figure 187: Cart with Cocktail Edit Option

9.7.3 Customizing Ingredients

The ingredient customization screen displays the default ingredients for the selected cocktail. Click the Add Ingredients button to open the ingredient selection dialog. Available ingredients are shown on the left; selected ingredients appear on the right.

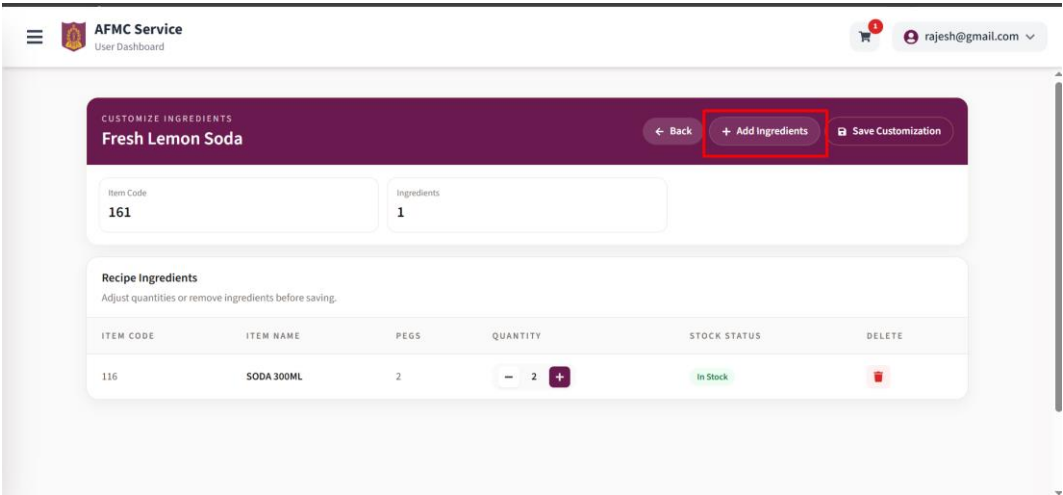

Figure 188: Ingredient Selection Dialog

Select up to three ingredients for your cocktail. If you attempt to add more than three, a warning message will be displayed. Similarly, if you try to add an ingredient that is already included, an 'Item Already Exists' alert will appear.

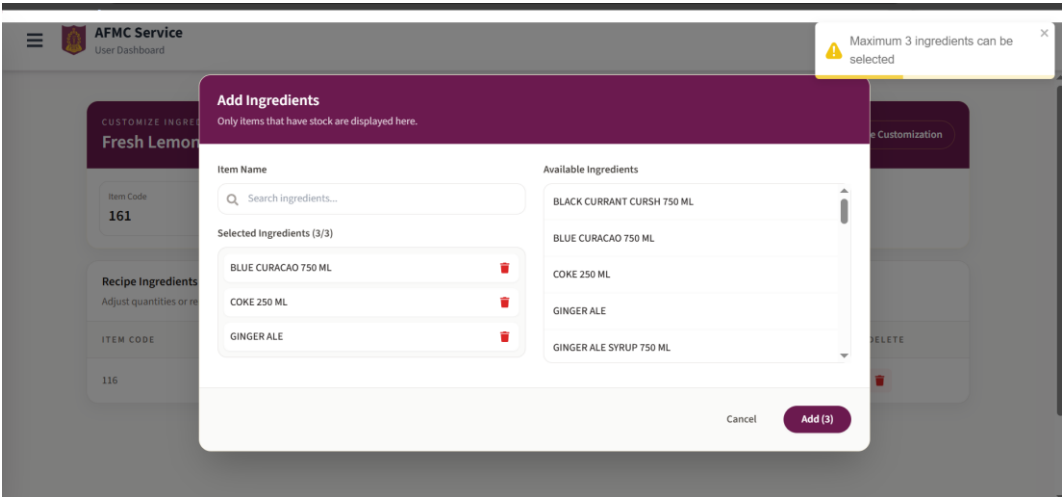

Figure 189: Maximum Ingredients Warning

For each selected ingredient, specify the quantity in pegs. The price will be automatically calculated based on the ingredient quantities. Use the plus and minus buttons to adjust quantities, or the trash icon to remove an ingredient.

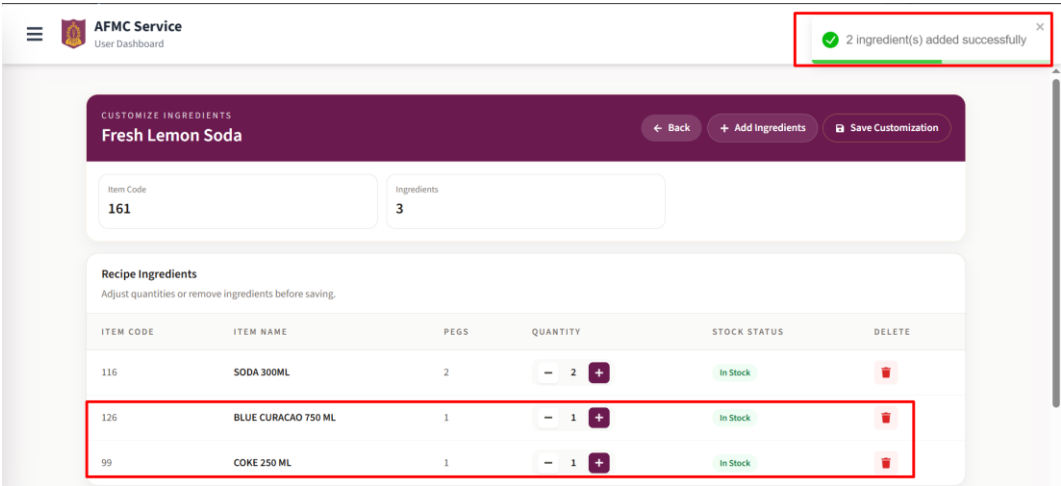

Figure 190: Setting Ingredient Quantities

If an ingredient is out of stock, you will not be able to proceed with that ingredient. Either remove it and continue without it, or substitute it with another available ingredient.

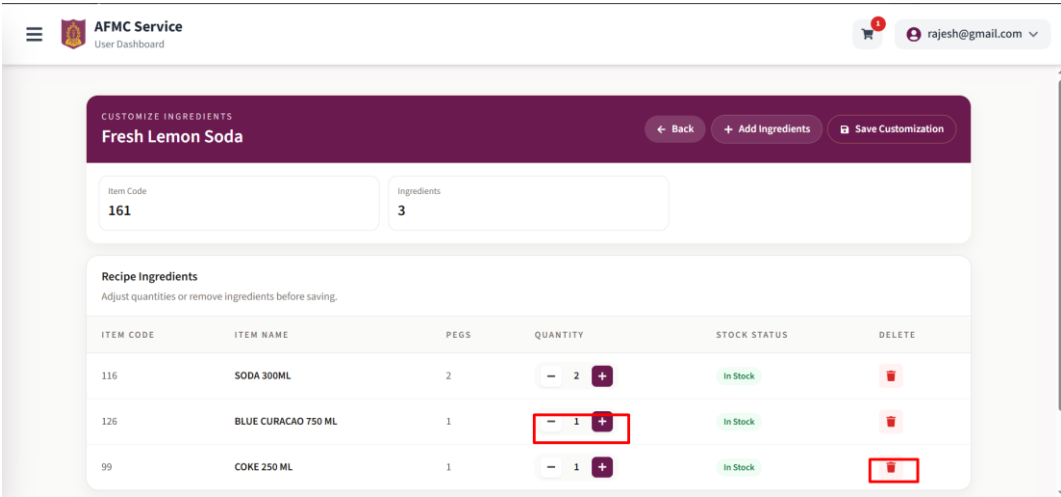

Figure 191: Out of Stock Ingredient Alert

After configuring your ingredients, click Save Customization. A success message will confirm your changes, and the customized cocktail will be updated in your cart with the modified ingredient list and recalculated price.

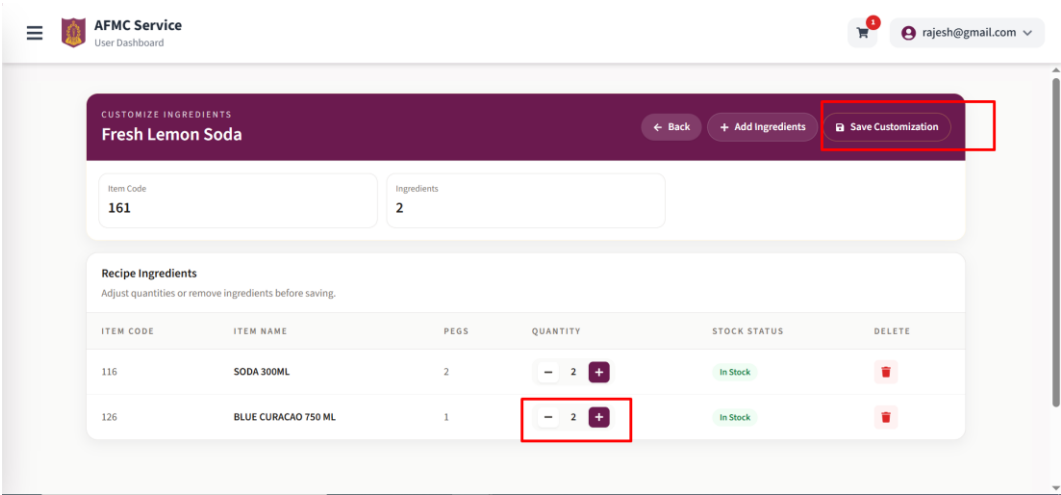

Figure 1921: Saving Customized Ingredients

9.8 Order Confirmation & Payment

After proceeding from the cart, you will be taken to the order confirmation screen. Review your complete order including all items, quantities, and the total amount. You can still adjust quantities or remove items at this stage.

9.8.1 Confirming the Order

Verify all order details are correct. If you need to make changes, navigate back to the cart. When ready, click the Confirm Order button to submit the order to the kitchen.

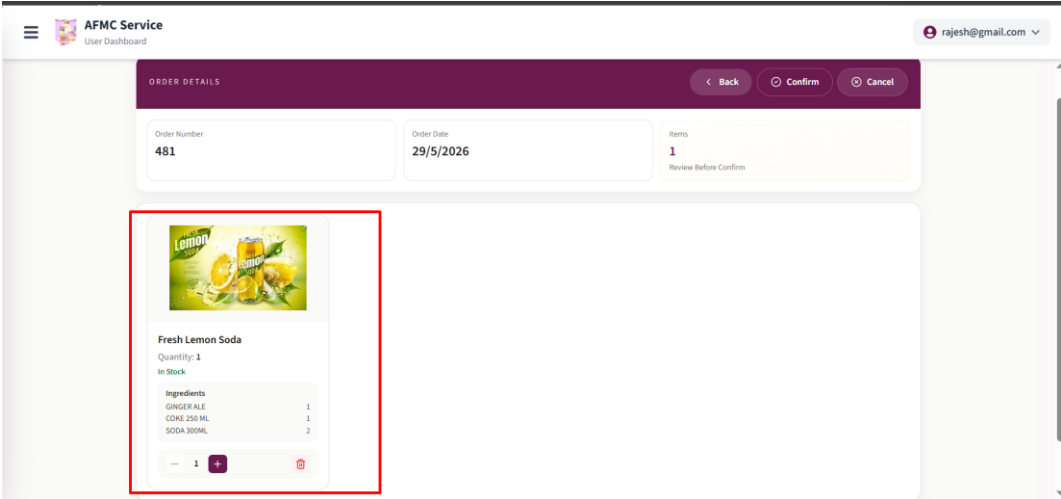

Figure 193: Order Confirmation Screen

After confirming the order, you will be redirected to the invoice report screen. This displays your order number, item details, quantities, prices, and the current order status. Initially, the status will show as 'Received' or 'Preparing'.

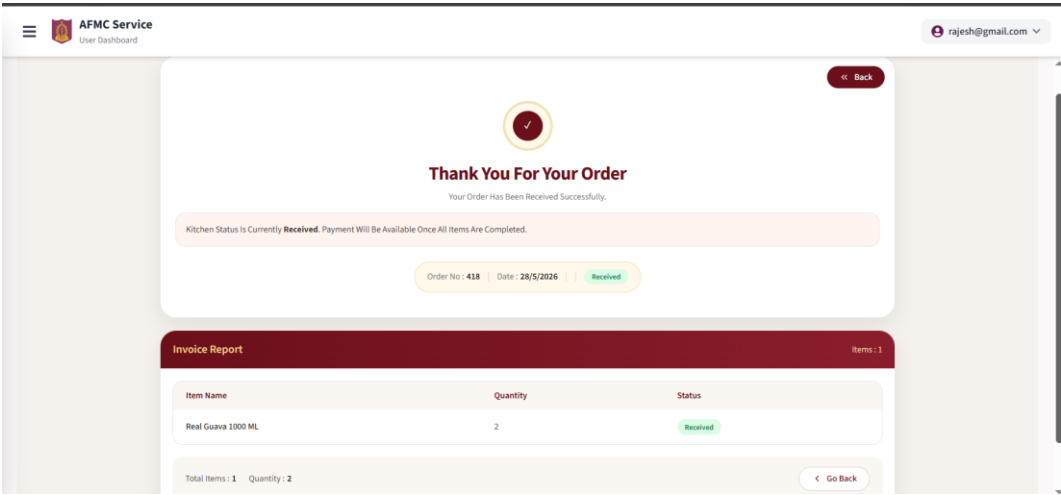

Figure 194: Order Invoice with Status

9.8.2 Making Payment

Once the kitchen staff has completed preparing your order, the status will update to 'Completed' and the Payment button will become active. Click the Payment button to navigate to the payment screen.

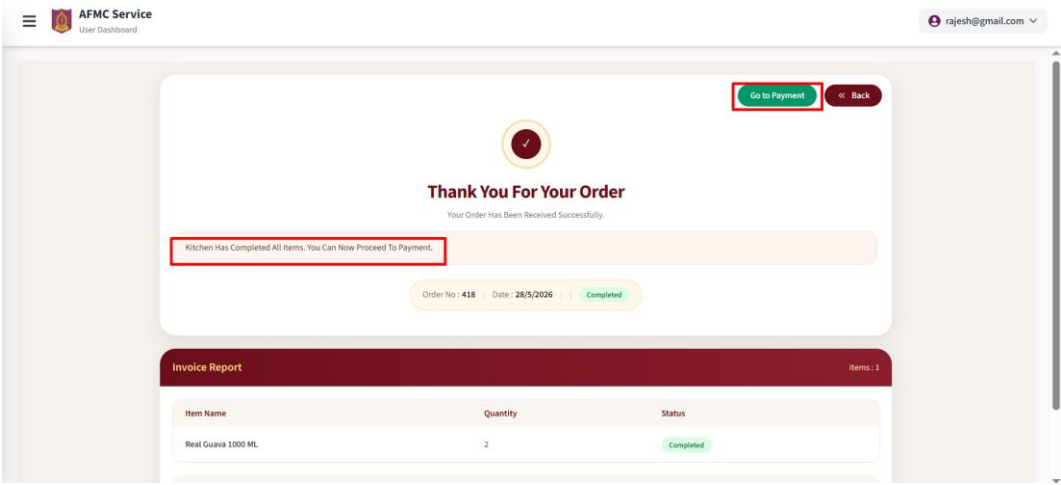

Figure 195: Payment Screen

The payment screen displays the final amount due. Enter the Payment ID (transaction reference number) and click Complete to finalize the payment. A payment confirmation will be displayed, and you will be redirected to the final invoice showing the payment status.

The screenshot shows the 'AFMC Service User Dashboard' for a user named 'rajesh@gmail.com'. The 'Payment Panel' is active, displaying the 'ORDER NUMBER' as 418 and 'ITEMS' as 1. The 'PAYMENT MODE' is set to 'Immediate'. The 'PAYMENT REFERENCE' field is labeled 'Enter Transaction Id'. There are 'Back' and 'Complete' buttons. Below the payment panel, the 'Order Items' section shows a table with one item: 'Real Guava 1000 ML' with a quantity of 2, a price of ₹ 23.25, and a total of ₹ 46.50.

Item	Quantity	Price	Total
Real Guava 1000 ML	2	₹ 23.25	₹ 46.50

Figure 196: Entering Payment Details

The screenshot shows the 'AFMC Service User Dashboard' for a user named 'rajesh@gmail.com'. The 'Thank You For Your Order' message is displayed, stating 'Your Invoice Has Been Generated Successfully.' Below this, the 'Invoice Report' section shows the following details: Invoice Id: 2079, Order Number: 418, Invoice Date: 28/5/2026, and Amount: ₹46.50. A table below the invoice report shows the item details: 'Real Guava 1000 ML' with a quantity of 2, a unit price of ₹23.25, and a total of ₹46.50. The table also includes a 'Total' row with a quantity of 2, a unit price of ₹46.50, and a total of ₹46.50.

Item Name	Quantity	Unit Price	Total
Real Guava 1000 ML	2	₹23.25	₹46.50
	2	Total	₹46.50
